Well boys, Hotmail is only email. I use it as an email PO box. I also
like the fact that I read my email using a web browser, not downloading
viruses and other filth into my PC. With a FAST PC and a cable modem,
I delete that smut about one per second. That includes .5 seconds to
determine if if gets read or trashed. No filters on my email.

Too bad I get lumped in the dumper bin with the rest of the loonies.

This speech recognition thing is really cool way to sit and talk to your computer screen and barely don't think that it has a grasp on but punctuation yet so some more training will be needed to get this neat little program up to speed so for now I will let the voice recognition do it for me because I'm a very lazy person
all I can say is this is some cool shit!

It needs work but what the hell.....

I have much the same problem with this that you do but I will give you one
way for it to happen:
Something like an old Micor, solid state Class C broadbanded, with B+ on it
all the time if not isolated from the antenna will be one phenomenal mixer.
Wonder if even a CB rig could not also serve the purpose on transmit? Seems
that the pi-section lo-pass filter should be enough isolation but who the
hell knows.

Sparks, is this cat across the street from some FM boomer?

Seems to be "small Potatoes" to me- I saw a CB antenna in a store
earlier this year that had the label "Guaranteed to handle 3000 Watts".
It WAS nicely Chrome plated, and had tubing in the coil.

Thanks, Power House - you were right, just what I needed.

Thanks, Richard, for defending an amateur's rights to transmit legally in the 10-Meter band. While it isn't legal to take a 10-meter radio and mod it to 11-meters, as then it wouldn't be "type-accepted" (and would probably be over-powered and illegal that way, too), as I understand it is legal to take a n 11-meter radio and mod it to 10-meters ... AND IT IS LEGAL FOR A LICENSED AMATEUR TO USE IT IN THE FREQUENCY RANGES AND MODES HE/SHE IS LICENSED FOR! One of the premier facets of the amateur hobby was building your own rigs, and modifying existing equipment for use on amateur bands - and that's what is fun to me!

Congratulations, Aaron, on your appointment as "news-group policeman" - hope you get the raise you deserve!

And thanks, Dave or Debby, for putting Officer Aaron in his place, and saving me the need to flame him!

Stephen Malott, N8JYV

I don't see how the loading coil being self resonant at 91.7 MHz can cause RFI. Either the radio is generating harmonics or there could be a cold solder joint in the antenna that is generating harmonics through rectification.

Bragging that you "don't care" if amps and freebanding are illegal
must be hard work for you guys, eh? Come on now, buck up. Let's hear
some more of that very creative BS about:

-export radios are only used to listen with
-illegal cb amps are sold for educational purposes
-25 to 32 Mhz is abandoned
-no FCC enforcement
-breaking laws is patriotic
-there's no crime unless you're caught
-etc. etc. etc.

>
> -SSB

I found the problem by checking it on the IRF. The 91.7MHz noise
appeared on the transmission line only when using that specific
antenna.

BTW, any resonant circuit can be made to oscillate when fed with
broadband noise, and sometimes it doesn't take much. Judging by
the area affected by the noise, there couldn't have been more than
a few milliwatts being radiated, and that could have easily come
from broadband noise and/or a nearby harmonic, even after filtering.
It wasn't much, but it was enough to cause a problem.

What's interesting is this: If the power causing the noise was only,
say, 4 milliwatts, that's 1/1000 of the total power. If he had been
using 1000 watts, there would have been a much larger area covered
by the noise. Also, since every inductor is self-resonant at some
frequency, how many of these loaded antennas are making noise, and
at what frequency? Not always at the harmonics, that's for sure.
Keyclowns think they are running a clean signal, but they will never
know unless they spend a few thousand for a proper comm analyzer
(or if the FCC ever comes a'knockin). Legal CBers need to pay more
attention to RFI as well, as long as there is crap like this antenna
out there being sold.

Well, all the meals in jail are free, all the clothes, the utilities,
the entertainment, the sex... And everything needs to be free when
they get out because they won't have any money left after the fines,
damages, and restitution. Yep, sounds like a very appropriate slogan
for them!

Aaronia -- she is female -- has this urge to build a shrine out of Part 95 and assorted type-acceptance labels. Your interpretation is the correct one: I have modded CBs, GE repeaters, old 2 MHz marine junk to 160, a short ton of old command sets for all sorts of nefarious purposes, and a partridge in a pear tree. Like most women, she wants EVERYBODY to worship at the shrine. The greatest advancements in Amateur Radio come when there is a new supply of junque to keep the rosin-heads going.

When you taking the General son? You may or not be aware that your ticket will be renewed as a Tech and it will be up to you to document your code test.

Agree on the ability of unintended diodes to play harmonic generator but
there aren't that many CB channels that make it into the FM band.

Hi Doc.

Crank:
A device for transmitting or converting motion, Consisting of an arm
projecting at right angles from a shaft.
or
To start an engine with a crank.

Regards,

Brainbuster.

---

Exactly... bother nobody, and you will not get caught. When "Druggies" start
stealing to fund their habit, they get noticed... and end up being busted.

> unless somyou get caught if someone rats you out,

I hope the "you" is not meaning me in particular, or proof should be
supplied.

> the same goes with speeding down a
> highway If no cops are on the road you can speed all day long, unless that
> is someone calls them and reports that you are driving like a fool.

This is where things are different. Police often DO sit on roads looking for
someone to "bust" for something. Apart from the police themselves, very few
people are in favour of spending tax payers money this way, when there are
plenty of reported crimes to keep them busy.

> I ask the same of all laws Smoke pot at your own risk, it is still illegal.

Smoking it is probably not a great risk... very few get "busted" for using
"pot". What is risky, is upsetting the friend or neighbour who knows you
smoke it.
Same with illegal CBers... but you cannot rely on your neighbour warning you
first, some may report you without even letting you know.

> Who said anything about the FCC checking Cbers to see if they are breaking
> the law, i said there won't be any random stops by the FCC. What will
> change is after amatuer bands are cleaned up they will move there efforts
> to CB, where do you derive that they will be checking cbers to see if they
> are legal or not is in your own mind.

No... It is not my idea, read the posts on the group and see who seems to suggest these things. But if anybody believed that "illegals" were about to be hunted down and "shot in the head", then they wouldn't be spending so many hours hurling insults at people.... They would quietly sit back, and wait for the action to start.

You seem to suggest that the FCC is leaving CB until they clean up Amateur radio. I find this very hard to believe. As some of the reports on here have been Hams breaking CB rules, this would suggest that the FCC were responding to complaints about CB abuse... and what did they find?? An Amateur committing the offences.
So it seems to suggest a consistant policy for both services... sort out reported crime.

> >
> > Put simply... If it aint broke, don't fix it.
>
> You hope this is what they say so you can continue to be illegal and have
> no fear of reprisal.

Wot me? Illegal??
What is your proof???

But I seem to remember someone saying "there won't be any random stops by the FCC", so that person seems to agree that the "If it aint broke, don't fix it" attitude is adopted by the authorities.

Brainbuster.

I am not sure exactly how you mean this.
If you are suggesting that the people of NY are being punished by God, or
that God must hate the people of NY, then read the book of Job.

Maybe, like Job, they are being tested. Hopefully, like Job, they will pass
this test... and be blessed with even greater things than before.

> .... Just beginning to get popular in 1976? And only 22,000 CB'ers around
> then? Somebody better do their math again ~and~ check a few dates.
> - 'Doc
===

I also find the figures unbelievable...

In the UK, a large percentage of cases of inteference are from LEGAL 4 Watt equipment. These radios are tested, and proved to have low harmonic output, and a good braid breaker and high pass filter on the TV will cure nearly all TVI cases. A filter on the TV could NOT cure the problem if it was caused by the CB radio putting out a "dirty" signal.
Even the Radio Investigation Service insist that a person has their TV system checked by an engineer before they can be called out. The RIS even released details of a filter circuit that they reccommended using, and some companies make their TVI filters to that design.

It is still possible for the CBer to limit the chances of a poor TV receiver suffering, by care with antenna position, and keeping the SWR reasonably low. And of course, the more power you use, the greater the chance that TVs and other electronic equipment will be unable to reject the signal.

As for the "4,000,000 people experienced TVI from an estimated 22,000 CB stations", do the math... Each CBer is said to be inteferering with 181.818 TVs.
Come on... are we supposed to believe that the *average* CBer inteferes with 181 TVs???

^ Go back and reread my comments CAREFULLY.

> You seem to have more "knowledge" about terrorist activities than the FBI,
> I would be interested to know what experience you base this "knowledge" on.

^ That is your opinion. I'm simply stating the FBI would be totally negligent
^ if they did not consider the possibilities.
===

Go back and read your own comments carefully... where do you mention that the
"FBI would be totally negligent"... exactly, you don't.

Phrases like "It would.", "would provide convenient cover", and "So they use
all of the above" are unambiguous statements suggesting a good knowledge of
these matters, and that your statements are known facts. There is NO mention
of the FBI in your post.

So it is not my opinion, but the impression you attempt to give.

===
> To try using a large KW signal as cover for a small hand held signal could
> be so effective that they would get a greater range from their voices...
> without any extra comms tools. Have you tried "talking over" two very
> powerful signals using handheld CBs???

^ Like I said ->>> Go back and reread my comments CAREFULLY.
===

Like I said, Go back and read your own comments carefully. Stop trying to
worm out of what you said. If you didn't mean what you said... be a man, and
say so.

===
^ Nothing in my reply said anything about talking over any station. Now to
^ address your comment. Who said the KW station has to be anywhere near where
^ the handhelds are used number one?
===

If they are not near to the handhelds then they cannot "provide cover", as
everyone else will also hear the handhelds. If they are *not* talking over

them to each other, then you are suggesting that they occupy another channel... and so they could NOT "provide cover" for them.

===
^ Also by just filling up any given channel with useless noise, potty talk
^ etc. It then become easy for a quick and brief message to go unnoticed.
===

I get it... just like the AMATEURS that get busted for these offences. But of course, that is not the issue... you class them as CBers, although it is clear thet the FCC will still consider them as "hams", and may revoke their licence.

Any short message by ANY form of communication can easily go unnoticed. The FBI cannot have the resources to monitor every frequency, phone line, e-mail addy, newsgroup, website, newpaper advert, and every other form of communication 24 hours a day all year.

Secret messages can be hidden within seemingly innocent messages. It is possible to send two audio signals at the same time on one carrier... one "innocent" signal is heard by standard radios, and the other "secret" message is only heard on a modified radio. A cheap circuit could easily be put together that would allow a CB or "Ham" radio to do this.
This post could even contain a secret message, and you may not even know that others on the group with the decoder rings are having a good laugh at your expence.

Can you see the size of the problem?? Bugging of all communications, and searching every message for secret messages is not an option. The only option is to listen in on suspected terrorists, bug their communications.

===
^ That same idea applies to a room filled with loud talking people. Real easy
^ for two people close together to exchange a quick message between
^ themselves unnoticed by several others in the same room who are
^ deliberately trying to monitor such conversations.
===

But this chatter would NOT provide cover if the other people are not close by. The further away they are from the two needing cover, the more people will be nearer, and so will be able to listen in.
If the "chatter" was in another room, and the two were not trying to talk over it to each other... then it would not provide ANY cover.

==
^ Now what got us in to the present mess, with 5000 dead or missing and two
^ destroyed buildings, is because nobody though it was possible that a
^ handful of people would turn jumbo jets in to flying guided missiles.
===

What allowed it to happen, was that security was lax on "internal" flights. The security issue was known about, and warnings had been given... but "internal" flights were not considered to need the same security as

international flights.

Now they know better. But let's be honest... CBers were NOT the cause, and so this is not a CB issue, but an airline security issue. If CB didn't even exist, it would still have happened.

Brainbuster.

It is indeed. The Communications Act gives the Federal administration no authority whatever over receivers. The crime if any is not so much listening as using the information for a crime or personal use. Two exceptions are required coverage for TV receivers and a ban on cell listening, both of which technology are about to make obsolete.

Nothing to say that police transmissions cannot be encrypted and a lot are at some sacrifice in range and convenience.

> Do you have a metal roof? Put the antenna in the center of the top.

No, I have a hardtop from besttop. That's some kind of polymer plastic
material. That's one of the reasons why I want to mount the ant. on
the spare wheel. And if I mount the antenna on top, it would be making
the vehicle extremely high also :(

I just don't know if it's possible to use the antenna with a mount
like that, and how long the coaxial cable has to be :-/

Just curious ... I have read about the mess with - was it the W6NUT repeater (not sure of the call) - and I keep hearing about the VHF 'mess' - yet I've still to hear it. Maybe Rochester, NY, is just too small a city. Although I'm on 440, the megaplex repeater system links repeaters (more than one repeater per some bands) on 440, 220, 2 meters, 6 meters, and 10 meters. I've yet to hear any grief on the megaplex or on any of the 440 repeaters. I've also not heard anything about a mess from the many folk who operate on 440. Right now Nevada and Wyoming are comming in on the 10 meter port - and folk from Rochester are talking with them. I've still to hear any bad operators since getting on UHF about 4 years ago. I doubt I'll argue with the rest of the post though ...

You may be asking the wrong question. The tech standards on all of these freqs vary a lot. A lot of people firmly convinced they will never take a code test find it interesting to have the proverbial 'shack on a belt' where they can do everything from fire up the local repeater to converse with the drive-up lady at McDonalds (a common MURS use). They are known to all as 'painus acutea backsideium'

Is it a TJ or a YJ?

TJ- I have mine mounted on the bumper. I took off the endcaps,
drilled one hole out to 1/2" and got a Francis M-102 mounting
stud. I use a KW-7 Firestik. It's directional, but it works.

YJ- I have seen them mounted on the spare tire stop.

Also, coax length does not matter. Use good coax. Toss the RG-58.

What? Reminding you that you are illegal?

>since june, 2000...

Sigh. Seems like only yesterday.

>my question to you is this....do you have plans for
>continuing this tirade into the next year?????

Thank you for asking Randall. The answer is YES, I intend to step up my posting activity approximately 72%. Also I'm looking into password-protected multiplex access to my account - so that anyone wishing to speak out against illegal CBers can do so freely without fear of reprisal. In the long term, I am researching plans to establish the nonprofit Aaron Voobner Foundation that would recycle the assets seized from illegal radio outlaws and pirate CBers and put them to use in basic electronics courses for kids. And then there's an ongoing intruder watch project that's primarily concerned with providing useful information on unlicensed and illegal radio activity

to the authorities. So there's a lot going on in the next year, and it's all focused on making illegal CB unpopular and difficult to practice. Again, thanks for asking.

Hey Dick, what about the idea that Landshark and others promote that
there is no crime unless you're caught? That would sorta cancel out
any personal responsibility at all and give you a "license to steal"
wouldn't it?

No need to get nasty. In your previous message you said "It has been moded
though."
Now you're saying ""It's un modified now Bozo."

Which is it?

Also, I'm aware of mods to open up 800 to 900 MHz, but not 520 to 760 MHz.

Your original post said it covered 25 to 1300 MHz. Now your saying something
different. I think the failure to communicate is on your end.

Hello All:

Here is a neat Oh web site.

http://www.retrocom.com/buddybase.htm

The old Buddy Base CB Radio that was made in the mid to late 1960's, is shown here at Retrocoms web site. Which is well worth the time to tour around. Even Popular Communications Magazine plugged this web site as one of the better CB sites, and it is.

I sent The folks at Retrocom (Yesterdays Technology Today) a few photos of the old Buddy Base Radios, and very rare photos of the single Buddy Base CB radio.

This ought to make your "old fart CB'er" light come on bright!

Has plenty of old CB radio pictures and advertisements, and truly a treasure of older CB stuff.

Jay in the Mojave

Not even close, and the closest station in frequency is 91.9, which
is a 100 watt community service station across town.

I'm still not absolutely positive why this rod is doing what it
does. I fed it with a noise box and I get a definite spike near
91.6, and the sig-gen spikes it in the same place regardless of
what freq it's sending. The signal is strongest at the loading
coil. I'm sure this is not a typical problem, and it's a strange
one for sure. But I've seen stranger stuff happen. I even have a
shorted resistor on the shelf (which I thought was impossible) so
I'm not dismissing any explanation quite yet.

a shorted resistor? That's got to be similar to the inverted DC inductor
and the "leaking capacitor" pans a friend of mine has in his shack.

Where's the usual veiled threat, Randall? Are you feeling OK? It's not like you to respond without some WWF fantasy banter.

And regarding that silly BADGE, no thanks Jim. I don't want any badge and certainly don't want any arrest authority. In fact I wonder why you'd suggest such a thing. It seems like anyone who looks down on amps and freebanding gets labeled a "cop" and told they are trying to enforce petty rules. Why is that?

Also, how come you act so different in rec.radio.amateur.policy, Jim? Whenever they start bashing the Cbers in that group you clam up or you agree with the majority. Guess you're just a "go with the flow" kinda guy.

Not to make too much out of it but technically, CBers are users but not
operators. Of course depending on who you talk to codeless Techs may or may
not be Amateurs.

Noticed several things about the Buddy:

1. It is Heising modulated like the old Gooney boxes beloved of VHF amateurs. The choke modulation system made overmod impossible, in fact it made 90% modulation impossible.
In fact the schematic reminds me of a Gooney box. Gonset Communicator series.

2. Noting that the LO runs 2310 lo and the second mixer is driven at 2565 this implies a 255 Khz i.f. which was not all that unusual (old Buick car radios ran at 262.5) but must have made this rig potentially so narrow as to discriminate against the high audio tones without a bit of stagger tuning. The r.f. stages are also pretty bullet proof. For the price and vintage, this receiver should have been pretty damned good.

Should you decide to keep it and get licensed to use it, might I suggest:

http://ah0a.org. For Morse Academy, a tried and true learning tool. Follow instructions and the code might take you six weeks. I've seen people get to 13wpm in less than four.

http://www.arrl.org for lots of licensing poop.

http://www.qrz.com for sample exams

Would strongly suggest that you not bootleg on ten meters. It is a really sore subject these days and could lead you into ugly situations.

Get moving on the ticket before the sunspots go out. Use my e-mail if you wish.

Later exploration led me to the Predicta TVs which are lifted from the 1956 Philco G-line. You could see it coming in earlier Fiddleco's, the split chassis of the year before with a power/deflection chassis that took two men and a hernia to move and an rf chassis built with early printed circuit components. Always visualized two engineering departments with barbed wire and land mines between them.

The Gs were decent sets that suffered only with a 2.5 volt filament in the pix tube that lost emission rapidly plus a lot of techs barfed over PC boards. I had to renovate one as a high school student to get my own set.

Their claim to fame was innovative packaging that allowed one to have his set on the table next to the Barcalounger and run a big tape under the carpet (with 16kv on it) or replace the big moose console with a pedestal design known in the trade as 'water cooler'. When the sets kaputskied people were known to seal the pix tube cases and put fish in them.

Not too long thereafter Ford bought Fiddleco, the old Philadelphia Storage Battery Company, killed it good, and sold the whole thing to Phillips which sells Sillyvania and Maggotbox sets under the Philco name to cheap places like K-Mart where I bought mine.

Those old beasts were the sets of the future but the future never came.

Enjoyed the trip down memory lane.

Actually Aaron, I just happen to feel that if it is a problem, then the users of those frequencies should be complaining - not the hams (unless it involves 10 meter operation). Unlicensed use of 2 meters (or 10 meters, or 20 meters) IS a concern for licensed amateurs. The recent posts on rec.radio.amateur involved interference to computer speakers. This could be just about anyone (although if it is AM it is much more likely to cb). In any case, I have seen problems with computer speakers. The problem undoubtedly lies with the speakers. Of course, some immediately blamed CB. Regardless of the source, it is likely the speakers. Then someone suggested that transmission on the 1296 MHz amateur frequency could be picked up by a 1.2 GHz CPU! ROTFLMAO! Right, the CPU is demodulating it. Sure. Whilst I remain open to suggestions, I don't see how a constant barrage of the rec.radio.cb newsgroup helps anyone. Your thoughts on this?

Hello George: I am use to showing people the truth about technical things, and being told thats a "no no" in weak, nasally, high pitched voice. By some goof ball.

Ng group etiquette, and being a human being is something you should learn.

Most bitchen people such as myself, make the rules as we go. Accomplishing tasks, making things, fixing things, having honey's adore us in the norm.

Guys like you who whine, bitch, moan, complain, are the types that other men say there goes a women driver when it turns out to be a man.

I guess thats natures way. Some guys are bitchen and some ain't.

Jay in the Mojave

No, you listened to a 90's or a 00's Potty Channel! Every area has them.
BUT what is on 52-890mc is by FAR way worse than that! (I've said for years
that people hear on the TV, and go practice it on da CB. Now we have 1 step
furthur--a Boob named Nerd that hears it on da hambo bands, and then goes to
my digital CB NewsGroup and preaches even MORE communism than even hollywood
spews!!!!!! !
Dave!!!!!!

Bill:
The "peaked" CB's do usually + or -2 watts more & 40% louder modulation, basically. The BIG COIL antennas are rated for the BIG power, but VERY FEW people have even 1/10 of the power that the antennas aare rated at. Just more hype & lies from the Antenna companies, which you probably are familiar with, but maybe they just lie @ CB freqs.!
Dave!!!!!!!!!!!!!!!!

Posting pix gives some a bad case of frijole poisoning and they feel called upon to vent. I, for one, thought it made its point really well.

When you are bitchen, indulge yourself. Makes for some good memories when the snow hits the roof and you live in the desert.

Dick, NBK, aging boy wonder.

I was trucking last Thursday night and I heard a lot of cbers on sideband channel 28. They were using numbers as callsigns and saying where they were txing from. Do you need a license to sideband? Where do you get this?

jb from WI

You seem obsessed with freebanders,CB users etc.. I notice you post the same or similar replies to lots of posts. I assume your retired and lost interest in HAM radio and decided to kill time in the rec.cbradio newsforums. Anyhow I guess everyone needs some kind of crusade to feel important.

No, you don't need a license to sideband. Alot of people make up numbers for themselves, others belong to clubs (such as the TransWorld Sidebanders) which assign numbers. I used to be 31X141, then 31X151 when I lived in southern California, and 45X008 (Davis County Controller) when I moved to Utah. Others just use their birthdays (218 in my case) or the numbers on their license plates.

If you don't want to join a club, make up a number, and enjoy sidebanding. It's a great alternative to AM, and it's cleaner to the band. It does take some knowhow to tune the other signals in, but hey, it's worth the difference. Most of the ignorants (and I stress most, some do make it over to sideband) stay on AM, and the sideband "channels" are generally populated with a higher class of operator. This is not to say there's no high class AM operators, mind you.

Most of the CB DX happens on 37, 38 and 39 LSB. Make up a number, and have fun.

"151 in the Diesel Car, saying 73, and going QRT"

but how are you going to catch people using Frequency Hopping
equipment on 11 meters now. like those using Harris RF-5800H radios
which FH and Analog voice crypto. Freeband is moving to new
technologies. Remember with FH you will never hear the transmissions
since you need a radio Synchronized with the Hopset.

>Do you need a license to sideband? Where do you get this?>
Buy a radio with sideband. No license
required. But try Channel 36 thru 40
for SSB (single-side band). If you get a good enough radio try above 40. Lots
of folks up there, especially 27.455 LSB
(lower side-band).

Obsessed is correct. There is no license record with her name on it ever so
don't blame the Amateur community for Aaronia. She has mentioned that she
is 'studying' though but if she butchers Part 97 like she butchers Part 95
there is no hope for her to make General.

Most of us have killfiled her out of sheer boredom. Might suggest you do
the same.

For a group that laregly professes to have me in their kill file, I think my posts are getting examined with a wee bit too much zeal. Do you really think I have plans to establish a nonprofit foundation to recycle keyclown amps as educational tools? Or could it be I was just yanking SD Jones chain a bit?

My thoughts? Even a casual observer of this NG can see that there are a lot of hams and CBers that openly promote illegal CB. My opinions simply provide an alternative POV.

Hi folks-
I have a really fine example of this model of mobile radio, and was curious about expanding it's channels from the current 23 to the full 40.
I love to talk on vintage rigs, and it's a lot of fun to talk to older CBers who lovingly recall the very rigs I'm using to chat with them. I have a few Messengers which only run 23 channels (and one which only has five channels) and for strictly AM they're really great, so I've never done anything to modify them.
But this 352D is in good shape, all the way around, and I would love to expand my vintage operations to mobile SSB... and with a 23 channel rig, obviously I cannot get the usual ch. 36-40 SSB freq's.
Any info would be well appreciated, any leads to good vintage CB sites (whatever happened to Woody's CB Gazette?!?!?!) as well. Also, I am up to installing an external crystal switch bank or VFO to do it right, but need leads and advice from you experts.
Hopeful for input-
Linus

RESCUE RADIO: HAMS HELP IN AFTERMATH OF NYC JETLINER CRASH

Ham radio operators in New York City, still weary from the aftermath of the September 11th terrorist attacks were called out once again. This, after an American Airlines jetliner in route to the Dominican Republic broke up in flight shortly after takeoff from Kennedy Airport. The Airbus A-300 had 265 passangers and crew. It crashed moments after takeoff setting homes ablaze on thrr Rockaway penninsulia. There were no known survivors. We have more in this report:

--

When American Airlines Flight 587 crashed just minutes after takeoff from Kennedy Airport in New York City on November 12th, the Salvation Army was one of the first groups to arrive at the disaster scene. It brought in several mobile canteens to help feed rescue workers and residents whose houses had been damaged or destroyed.

The Salvation Army regularly uses ham radio operators in its SATERN network to maintain communications between its units at a disaster site. This being the second disaster to hit New York in two months' time, the Salvation Army Incident Commander asked the SATERN disaster command operator, Carlos Varon, K2LCV,to request additional ham volunteers. Operators were needed to staff the canteens and a mobile command post.

Initially up to a half dozen ham stations were to be set up at various locations near the crash site and another at Salvation Army Headquarters in Manhattan. It was anticipated that the communications mission would last three to four days.

Also, according to ARRL New York City and Long Island Section Manager George Tranos, N2GA, the League's Amateur Radio Emergency Service was on standby for the American Red Cross. Hams were later reported as providing communications support to the Red Cross for its operations.

But getting to any assignment was not easy. New York officials initially feared this was another terror attack and put the city into a near lock-down, closing all airports, bridges and tunnels for several hours after the crash. In addition, the crash site itself was on an island, and access to the area was severely restricted. All this made it difficult for ham volunteers to reach their assignments. Finally, they were all told to gather in one place where they would be escorted in by a Salvation Army command vehicle.

Among those who helped organize the ham radio response was Mark Phillips, KC2ENI, the ARR Emergency Coordinator for Queens County. The Rockaway Command station was Joseph Albertus KB2QLE and Net Control on the 147.090 MHz repeater was Michael Lunetta W2MPL.

From the offices of CQ Magazine, I'm Rich Moseson, W2VU.

--

Authorities who found the flight data recorder said it contains information leading to an initial conclusion that mechanical failure of the Airbus jet was the cause of the crash. (W2VU, WB2FXN, K2VMR, N2GA, and communications monitored on the 147.09 repeater)
**

RESTRUCTURING: RUSSIA SAYS NYET TO NO-CODE

The Russian Federation has said ‘nyet’ to no-code. According to the W.I.A. Victoria News, the Federation says that there are good reasons for the Amateur Service to continue with Morse as a license requirement for operation below 30MHz. It also says that it has no plans to make any changes to its domestic licence conditions. Amateur Radio Newsline’s Roy Neal. K6DUE, takes a look at the surprise Russian position:

--

"Keep the Morse Code." That's the position of The Russian Federation. It was revealed by the International Telecommunications Union on the 12th of October, when that organization released a position document for the World Radio Conference of 2003..

The Russian Federation told the ITU that it supports most changes to International Radio Regulation S-25, which sets forth qualifications for radio amateurs. But, says the Federation, keep the Morse code. Reasons? First a strong belief that Morse testing is the big difference between Amateur Radio and the Russian version of Citizen's Radio Services. The Russian Federation also points out that lowering the code requirement in many other nations has not led to a significant increase in the number of hams in those countries.

The Federation says that it surveyed Russian radio operators and found overwhelming support for retention of the code and the Russians say Morse is one of the most effective means of communication in emergencies with clear benefits in reducing interference on the high frequency bands.

What does it mean to the rest of the world, this decision to retain Morse testing? Jim Linton, VK3PC, is the author of Australia's "Morse Code Watch."

He says the Russian Federation's position can be accomodated easily. This because any new I-T-U Radio Regulation S-25 to come out of the World Radio Conference in 2003 will set only a minimum qualification standard for radio amateurs. It will not force that standard on any country.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

As previously reported, the IARU Administrative Council voted on October 8th to support dropping Morse as a qualifying criterion for high frequency access. It says that Morse testing is no longer relevant to the healthy future of amateur radio. (W.I.A. Victoria, W5YI Report)

**

THE 100TH ANNIVERSARY OF MARCONI'S HISTORIC TRANS-ATLANTIC RADIO TRANSMISSION

I’m Bill Pasternak, WA6ITF, in Los Angeles, with a late breaking bit of radio history.

December 12th will mark the 100th anniversary of the first Trans-Atlantic radio transmission by Guglielmo Marconi. To commemorate the event, The Marconi Radio Club and The Falmouth Amateur Radio Association radio operators are making plans to celebrate this important historical event from December 11th to the 16th. And in this very rare recorded interview supplied by Q-News, Marconi himself commented on the his first contact across the Atrlantic pond. Take a listen:

--
Audio of Marconi commentary here. No text available. Please listen to audio newscast. Links are at http://www.arnewsline.org.
--

The signal Marconi referred to was a series of the letter S transmitted using CW across the Atlantic from Poldhu, Cornwall England to St John's, Newfoundland. For this 100th anniversary, the Marconi Radio Club will be using the call sign W1AA slash CC and will be operating from Cape Cod, Massachusetts, U.S.A.. This was the location of Marconi's 1903 Trans-Atlantic radio station. Marconi's 1903 call sign back then was "C C"

For exact times, frequencies and modes of operation for W1AA slash CC go to www.qrz.com/database?callsign=w1aa) (K1VV, Marconi Radio Club W1AA. Marconi audio supplied by Q-News)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the X-Warn repeater serving Green County Ohio.

(5 Sec Pause Here)

AMERICA AT WAR: G3 MAY HAVE TO WAIT

It now appears very unlikely that new G 3 personal communications technology will share the same spectrum worldwide. Amateur Radio Newsline’sa Henry Feinberg, K2SSQ, tells us the U-S military has other ideas:

--

While Europe and Asia have reached accord on commen frequencies for the introduction of G 3, the September 11th terrorist attacks in New York City and Washington have convinced the Departrment of Defense to take a different position. The DoD now says that it is not in the national interest to relinquist spectrum in the 1710 to 1850 Mhz band just because that happens to be the same spectrum to be used commercially overseas.

According to the latest issue of the W5YI Report the Cellular Telecommunications and Internet Association says that the Department of Defense will encounter interference from 3 G wireless devices but the DoD disagrees. It says that whatever equipment it has is far more powerful. The DoD adds that it may interfere with 3 G cellular telephones oversaeas but that the cellphones will not adversly impact on the military or its operations.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

In other words, over here in the United States, if G 3 wants 1710 to 1850 Mhz -- its going to have to wait. (W5YI Report)

**

AMERICA AT WAR: EMERGENCY CELLULAR TELEPHONE PLAN

Verizon Wireless and the United States government are in the final stages of a deal that would give some emergency officials priority access to the company's cellular network. Under the agreement, about 2,000 federal, state and local officials would be given a code that allows them priority over others trying to make calls.

The system, intended to be used only in times of crisis, would be operational in New York, Washington and Salt Lake City, the site of the 2002 Winter Olympics. Verizon has submitted a request to the Federal Communications Commission, which must review and approve some elements of the plan. According to a government official who spoke on condition of anonymity, others trying to make calls could get busy signals because of the plan. (Published news reports)

**

ENFORCEMENT: FCC TO CB OPERATOR – TIME TO PAY THE FINE

The FCC has told a mid-West C-B operator that he has to pay the price of breaking the rules. This after the agency affirms a $9500 Monetary Forfeiture issued last summer to Klaus D. Kramer of Oklahoma City Oklahoma.

--
The Klaus Kramer story goes back to last February. This is when the FCC received several complaints of a CB radio station operating with excessive power in Oklahoma City. The Dallas office sent agents to locate the source of the transmissions. In the course of the two day investigation the agents traced transmissions to three locations including Mikes Cycle Shop. The latter is a business owned by Klaus Kramer.
The agents conducted inspections that revealed that Mr. Kramer violated Section 301 of the Communications Act by operating radio transmitters without authorization. Kramer admitted to making the transmissions and voluntarily relinquished the equipment. On March 12th the Dallas office issued two Notices of Violation to Kramer. In response to the Notice's of Violation, Kramer acknowledged the violations and indicated that he would discontinue operation of the station. On July 13th, the Commission's Dallas Texas field office issued the Notice of Apparent Liability for Forfeiture in the amount of $9500 to Kramer for the noted violations. Kramer filed a response to the NAL on August 14th claiming that the amount was excessive.
In denying Kramers appeal, the FCC's November 8th order says that its Dallas office has complaints regarding similar operations on two separate occasions in March 1998 and October 1999. In both of those instances, Kramer also voluntarily the offending equipment and on at least one occasion stated that the violations would not be repeated. None the less, the FCC says that its investigation has revealed that Mr. Kramer again: "...violated our rules" in February 2001. Thus says the government, imposition of the $9500 is not excessive and is proper in this case.
For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, reporting.
--
Kramer was given the usual thirty days to pay the fine. He also has the option of further appeals. (FCC)
**

ENFORCEMENT: FCC TO STATION OWNER - YOU ARE OFF THE AIR

Hams are not the only ones feeling the pinch of the Federal Communications Commission action. Five Midwestern radio stations have gone off the air after the agency denies an appeal by their owner who the FCC says was found unfit to continue to operate them.

Back in 1994 the owner was convicted of crimes involving minors. He was sentenced to an eight-year term and was released in 1999 after serving five. Last July he was told by the FCC that he no longer held the minimum requisite requirements to remain a Commission license. Also, that he would lose his licenses to operate the stations within 90 days.

Last month he petitioned the FCC to allow him to continue operating the stations. The FCC denied his request on October 3rd and the stations stopped broadcasting just after midnight October 4th. The FCC says it plans to auction off the station licenses. The owner is reportedly considering an appeal. (FCC, other published reports)

**

FCC NEWS: MASS MEDIA BUREAU APPOINTMENT

Nina Shafran has been named Deputy Chief of the FCC’s Mass Media Bureau Audio Division. Shafran joins the Commission from the staff of the Dow, Lohnes & Albertson communications group where she specialized in broadcast matters. (FCC)

**

HAMVENTION UPDATE 2002: DISPELLING RUMORS

If you are one of those who heard a rumor that the Dayton Hamvention is leraving its longtime home at the HARA Arena, then forget it. Its nothing more than the normally irresponsible Internet rumor mill working overtime. Bill Pasternak, WA6ITF, has more:

--
According to planners posting to the official Hamvention website, the erroneous rumor began the week of Hamvention 2001. This, after it was was allegedly printed in a Chicago newspaper that the HARA Arena had been sold. It had not been.

The Hamvention Committee spent the weekend of the 2001 event reassuring its vendors and attendees that HARA had not been sold. Also, that Hamvention's contract had not been "bought out" and that it would be back at HARA.

But that’s not all. The HARA Arena management issued its own formal statement. It also satated that the HARA had not been sold, and that it will not be razed. We at Amateur Radio Newsline were there. We heard it first hand.

Most important the HARA folks reitterated what the Dayton Amateur Radio Association has stated. The Hamvention will be there as promised. And as those of you who received last months mass mailing already know, the dates are May 17th, 18th and 19th, 2002. We will see you there.

For the Amateur Radio Newsline, I’m Bill Pasternak WA6ITF in Los Angeles.

--

So much for the rumors on the Newsgroups and other internet gossip spots. The real story is always at www.hamvention.org. (DARA)

EMERGING TECHNOLOGY: DTV ROLLOUT UPDATE

Roughly two-thirds of commercial television stations plan to broadcast a digital signal by a federal government deadline of May 1, 2002. This, according to the National Association of Broadcasters.

In a report to the Federal Communications Commission, the industry group said that many of those that won't make the deadline are waiting for equipment to be delivered and expect to have digital broadcasts on the air in the months afterward. But some stations in smaller markets are having a hard time paying for the upgrade, the association says.

Right now, most home television sets in use receive only analog signals. But congress has mandated that broadcasters must give up their analog channels to the government by 2006. As a result, there are concerns that consumers won't have made the costly upgrade to
televisions that can receive digital signals by that date. (News release)

**
HAM RADIO IN SPACE: ISS TALKS TO WISCONSIN SCHOOL

Students at Tremper High School in Kenosha, Wisconsin, asked questions the morning of November 6th of the International Space Station Expedition Three Commander Frank Culbertson that got some very personal responses. Culbertson told the teens that he certainly did not expect as much to be happening on Earth during his stay at the orbital outpost, in obvious reference to terrorist attacks. He said that he wished that he could have been with his family during the most stressful times, but he took comfort in knowing that they were strong, and could get by.

On a brighter note, Culbertson said that his current mission is the high point of his space career. He added that he hoped some of students at Tremper High can do the same thing some day.

In response to another question, Culbertson said that he hoped to see cheaper access to space, and hoped for a manned Mars mission and a permanent lunar base during his lifetime.

The contact was an event facilitated through the Amateur Radio on the International Space Station project, sponsored by AMSAT, ARRL and NASA. In all, fourteen students asked one question each during the contact. About 60 other students and a few teachers witnessed the event in person, while M-S-N-B-C carried the audio portion of the contact live over its website. (ARISS release by Gene Chapline, K5YFL)

**

HAM RADIO IN SPACE: NEW ANTENNAS HEADING TOWARD THE ISS

The International Space Station could have a new set of ham band antennas by early in 2002. The antennas are expected to be trtansported to te ISS this month and installed around the perimeter of the Service Module. This will give the I-S-S ham station high frequency, VHF, UHF and microwave capabilities.

The most interesting of all the new antennas is the high frequency array. Its made up of a two and one half meter long flexable tape that will definately work on 10 meters and holds posibilities on 15 and 20 as well. This particular antenna was a joint effort of the Italian, Russian and United States ARISS design team. (ARISS)

**

HAM RADIO IN SPACE: STARSHINE NEEDS TELEMETRY REPORTS

Ground controllers of the Starshine-3 ham radio satellite are seeking volunteer amateur radio operators and others worldwide to monitor and report telemetry from the recently-launched satellite. Starshine 3 transmits 9600 bit per second AX-25 protocol packet telemetry every 2 minutes on 145.825 MHz.

The satellite’s primary mission is to involve school children from around the world in space and radio sciences. Students should be able visually track the satellite during morning and evening passes by recording its telltale mirror flashes and reporting their observations to Project Starshine. To report Starshine 3 telemetry or to learn more about it, please visit http://epulation.com/starshine/starshine3. More information about Project Starshine is available at www.azinet.com/starshine. (STARSHINE vis AMSAT-NA)

**

CONTESTS: THE PSK-31 DEATH MATCH

Call it a truly different kind of contest. This, as the Michigan DX Association announces that it will sponsor the PSK-31 Death Match. The dates are December 7th through the 9th and a trophy will be awarded to the highest overall score. Just what is the PSK-31 Death Match and what are its rules? You can find out on the web at www.geocities.com/mdxa1/death match.html (Internet release)

**

DX

In DX, a big surprise for 6 meter enthuiasts. Jeramy boot, G4NJH, has the details:

--

A combination of high solar flux and low magnetic activity provided world-wide F-layer propagation on 50MHz during the week up to the 4th of November. Strong backscatter and the occasional Sporadic E openings meant that all continents were worked from the UK on 50MHz during the course of the week.

On Tuesday, the 6th of November, a solar coronal mass ejection hit the earth's magnetic field at 0150UTC and triggered widespread auroras. Observers as far south as central California reported seeing vivid displays of the Northern Lights, although we had no reports of visible auroras in the UK at the time of compiling this bulletin.

--

As we go to air 6 meters remains a worldwide D-X paradise. More information is on the web at www.rsgb.org and on the subscription VHF reflector. (G4NJH)

In other D-X news word that two Spanish operators will be in Cameroon between the 11th and 23rd of November. The pair will be working on the installation of HF and VHF stations in hospitals and missions. In their spare time they will be on the air as TJ2RSF on the High Frequenvcy bands. Activity will be mainly SSB, with some RTTY and CW. (VHF Reflector)

And Chris Post, N3SIG, who is a Firefighter and EMT in the United States Antarctic Program at the McMurdo Station on Ross Island is now active as KC4/N3SIG until March 2002. Post told the Ohio Penn D-X newsletter that he will be active every other day starting around 2000-2100 Eastern U.S. time primerally using SSB on 20, 18 and 15 meters. All QSL cards go to AI3D and be sure to include an S-A-S-E. (OPDX)

**

THAT FINAL ITEM: HAM RADIO IN LEBANON

And finally this week, a look at how ham radio is able to survive in Lebanon. Q-News Graham Kemp, VK4BB, looks at the nation, its licensing system and its Amateur Radio Community:

--
Wireless communication was first introduced in Lebanon by French soldiers during the French mandate; consequently, a number of curious and interested Lebanese took on this hobby and started operating under a permit and a call sign provided by the French Authorities.

With Lebanon gaining its independence in 1943, the Ministry of Post and Telecommunications become the issuer of the license to own and operate an Amateur station.

In 2000, there were 230 licensed ham operators in Lebanon, and anyone over 18 years is eligible to acquire a radio amateur license.

Maximum authorised transmitting power is 1,000 watts. The exam is prepared by RAL and is supervised by governmental officials. It comes in three separate parts, which involve multiple choice questions which include theoretical questions on electronics, antennas, and other technical information. Also rules and regulations of amateur radio, and the laws of communication. Also, a test on how to establish a vocal contact over the air.

Their Society is the RAL-- the Radio Amateurs of Lebanon which, like ours represent him or her before the Local authorities and the IARU

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Truly an amazing story of how ham radio can survive even in the midst of geo-political problems that have plagued the Middle East for as long as man can remember. (Q-News)

Ah, TNX. But then it's neither.

This seems to be a hangout for many active duty military personnel from across the country. I'm surprised at what they discuss, much of which I would consider classified. And talk about your NWO stuff! I'm beginning to wonder if maybe the militant Moslems aren't correct in calling us "The Great Satan"!

Hello Dick:

1. The Buddy Base, from what I I have heard was designed and made by a guy who also worked as a ground aviation radio technican/engineer type ah guy. His Handle was Ron Con, who may have started Buddy Sales in Reseda Ca. Daves web site says it was George Marigold, maybe Ron Con is George, but I was all to young in the 60's to know any better.

But there was from what I can gather quit a connection between Buddy Sales, General Radiotelephone, Gonset, Comco, General Motors, the outfit in Pasadena, Johnson Radio, Courier (Dyna Scan now Cobra), a few of the Art Collins guys, Henry radio, and who knows what all else. These where are local to the Southern California area, and only a few minutes driving time between them all. Mostly all hams, engineers, and the likes that where the core of the mentioned companies.

I know Gonset, Comco, and General Radiotelephone helped each other out loaning equipment, parts, and assemblers and technicians when the need arose. I would guess that there where quit a few "How do you do this" lunches, and levelling of the radio technology, within this inner group of these radio people. My Dad attended a few of the radio boys luncheons, with all the boys.

So if a Buddy Base, Gonset, Comco, General Radiotelephone, or the others have similar circuits, I would not be supprised I have either a General Radiotelephone, Buddy, or something else radio with a Gonset marked transformer in it, if I could remember the radio.

I am sure I don't have all the facts together, and would appreciate anyone setting me straight, as to who was helping who. Perhaps Bob would know, and I have a couple of old friends who might be able to help me out here, who I will ask. And shoot it off to Dave for his web site. I will call Ray and Kathy of Lucky's CB, I am sure he knows all the hoo raw.

2. The IF section of some of the older CB radios, I know had lower IF frequencies as you have mentioned. Then they seemed to go the 455 Kc IF, and later on double and triple conversion receivers. But I am impressed that you could make such a analyst of the receiver and transmitter diagrams. We have had a few thank you e-mails from guys who have the Buddy Radios, and no where to go for the schematic diagrams, or interconnections.

Again Daves web site is very impressive. If you keep an eye on it, it continues to grow and get better.

The Buddy Base CB Radios where a small production run, I heard only 500 or less where ever made. I own 4 of the Buddy Radios, and have what I think is a Buddy adjustable low pass filter, and one of a dozen ever made Buddy Linear Amplifiers. These radios sold for $399.99 American Dollars in the mid 1960's and where considered as the Cats Meow back then.

One of the locals "Jeep" had one, and he was considered a Big Strap since he had a "Buddy Base", in his garage. Maybe I can also ask him? He is also into heavy equipment, and such. Jeep was able to talk to the ol man from the San Fernando Valley, to San Perdo where Dad kept his fishing boat. I remember Dad saying what a Big Strap Jeep was for being able to burn in a signal so far. It was of course the linear amp, and a very high mounted, Hy-Gain Penetrator 500 antenna, not just the Buddy Base CB radio doing all the high received signal levels.

I have bought a few of these old Buddy radios, saving one from sure death from my brothers basement, as it was setting in water.

Yes the receivers where reasonable tight. And you could hear your audio rattling around in the Transmitter, from your D-104 mic. But the "On the Air" light would come on very bright, is was on the center piece, that also housed the speaker, this was certainly a big turn on, radio wise.

As you can see in the photo, the Buddy Base Radios took up lot of desk space, especially with the Linear Amp setting next to it. But in Jeeps radio set up in the garage (wife disallowed radio equipment and personnel in the house) he had a piece of plywood, 3 x 8 feet as the table top, and a shelf 1 x 8 feet, with all the radio stuff on it. Simply custom, ah?

Frequency-hopping and spread-spectrum transmissions are easily
tracked using a wideband receiver with multi-channel rejection,
which is technology no more complicated than that used in the
radios being tracked. Crypto is more easily deciphered than you
think -- analog is almost always some sort of mixing/filtering
scheme, and digital cryptography is quickly decoded using the
successive approximation method. And regardless of the mode or
encryption, DF rules still apply.

I shit you not, and I didn't believe either it at first (or second,
third, etc). It's marked 22K but measures 0.3. I even checked
the manual for the radio it came out of, and it's supposed to be
a 22K resistor. And no, it's not a choke.

BTW, I ran out of frequency grease the other day, and I'm going
to be soldering on some transformers so I need some magnetic
flux, too. Know of any good suppliers?

U.S. Patent was issued for this to then ACTRESS Heddy Lamar (born Hedwig Eva Marie Kiesler , Vienna,Austria,1913) in 1942 (U. S. Patent number 2,292,387).Patent was shared with her husband (one of many) at that time (a prominent musician) and rights were donated to the WW II war effort. She received no monies from this invention called at the time a "secret communications device" which enabled what we now call spread spectrum or frequency hopping.
Beauty AND brains!

5624. Rules, laws, and gravity

Newsgroup: rec.radio.cb
Date: 2001-11-18 12:44:28 UTC

Source record: 104636

So because the "laws of gravity" are not in the Constitution, were not passed by Congress and signed by the Pres, does that mean they are just 'rules' and not 'laws'? If laws were made to be broken, why hasn't anybody has broken the "laws of gravity"? There isn't any 'gravity police' to enforce these 'rules', so why isn't everyone out breaking them? Don't these criminals want to exercise their freedom? Are they too afraid to challenge these 'rules', just like their forefathers challenged the 'laws' of England? Or maybe gravity is just another 6th plank communist plot? Or maybe it's just 'blind obedience'? Or maybe they break them but just don't get caught?

And what about the laws of physics, the same electromagnetic 'rules' that make the radio work in the first place? I could apply this to mathematical axioms as well, but I realize that some of you have underdeveloped quantitative reasoning skills (i.e, 'twistie logic').

So why -- the 'laws of supply and demand'? Could it be that those seabag lawyers really don't understand the meanings of the words 'law' and 'rule'? Nah, that couldn't be it...

===

True, the frequency mentioned (91.7MHz with a 3.5MHz) does not fall in the
harmonics of CB frequencies:
It would take a seriously butchered radio, but the VCO, carrier osc, and
harmonics of these could create other frequencies.

Hey, I just realised, the top 1.5 feet of my antenna is resonant at 656MHz...
that's in our TV band.

Brainbuster.

You seem to be confused about your belief...
You say that God did this, God did that... what God, Mr. Atheist.

If you believe what you have typed, then you are not an Atheist, you are an
Antichrist. Which means that you accept that God exists, and accept that
that you will be sent to hell for your blasphemy.

If you must bring religion into the subject, at least learn about it first...
Start with the book of Job, you could even learn why your statement is
flawed.

Regards,

Brainbuster.

Hi all, I have a cobra 2000 GTL for sale
in very good condition. It has CHs in it.
varb-power in it. 3 door bell pings, And
Davemade did the audio and rec in it.
It has a Digi-Scan-400 hook up to it. Go to
(25.995MHz-28.000 MHz) Looking for $300.00 for it. I will pay shipping
lower 48
E-mail for PIC...73s

>Train

Man, that is SO funny. In any big city you have TONS of RF interference that is NOT caused by CB. Back about 1982 or so, KOZK TV in Springfield, MO, had a persistent, but intermittent, problem that caused interference. They finally tracked it down to a nearby taxi company transmitter that needed some grounding. Too bad it wasn't a CBer, so these froth-at-the-mouth types could rant about it.

"Thou shalt not suffer a witch to live."

That mistranslation has caused more hate and discontent...

Have someone who speaks Greek translate that for real from the original
Greek, and you'll see that it's not "witch" but "poisoner". They were
synonyms in King James' time, but not synonyms now.

I've already got one of those cute Radio Shack 2m walkie-talkies, but I don't use it because I ain't got no license. I also have a Galaxy RCI-2950 which covers 26-32 MHz. The reason I don't use it is that I don't have a power supply or antenna.

ENFORCEMENT: FCC TO CB OPERATOR â☐☐ TIME TO PAY THE FINE

The FCC has told a mid-West C-B operator that he has to pay the price of
breaking the rules. This after the agency affirms a $9500 Monetary Forfeiture
issued last summer to Klaus D. Kramer of Oklahoma City Oklahoma.

--
The Klaus Kramer story goes back to last February. This is when the FCC
received several complaints of a CB radio station operating with excessive
power in Oklahoma City. The Dallas office sent agents to locate the source of
the transmissions. In the course of the two day investigation the agents
traced transmissions to three locations including Mikes Cycle Shop. The latter
is a business owned by Klaus Kramer.
The agents conducted inspections that revealed that Mr. Kramer violated Section
301 of the Communications Act by operating radio transmitters without
authorization. Kramer admitted to making the transmissions and voluntarily
relinquished the equipment. On March 12th the Dallas office issued two Notices
of Violation to Kramer. In response to the Notice's of Violation, Kramer
acknowledged the violations and indicated that he would discontinue operation
of the station. On July 13th, the Commission's Dallas Texas field office
issued the Notice of Apparent Liability for Forfeiture in the amount of $9500
to Kramer for the noted violations. Kramer filed a response to the NAL on
August 14th claiming that the amount was excessive.
In denying Kramers appeal, the FCC's November 8th order says that its Dallas
office has complaints regarding similar operations on two separate occasions in
March 1998 and October 1999. In both of those instances, Kramer also

voluntarily the offending equipment and on at least one occasion
stated that
the violations would not be repeated. None the less, the FCC says
that its
investigation has revealed that Mr. Kramer again: ...violated our
rules
in February 2001. Thus says the government, imposition of the
$9500 is not
excessive and is proper in this case.
For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA,
reporting.
--
Kramer was given the usual thirty days to pay the fine. He also
has the option
of further appeals. (FCC)

Take a look at the two r.f. stages in the buddy. It is really unusual for a receiver to have two to begin with at 27 megs. The first stage, a grounded grid 6DS4 a tube I am not familiar with to be honest, operates more or less wide-open without AGC or RF Gain control. This is VHF practice of the era and is today on SHF satellite stuff. It is for all the world an LNA, something to set the noise floor for all that comes later. VHF circuits typically used something like a WE417, later a frame-grid triode as the first stage to get some amplification without adding a lot of tube noise. That is one reason why I suspect some VHF engineers got their thumbs in the soup. From there on it is pretty stock although the bandpass filtering is first rate. That is one reason a 2310 first i.f. works.

Regulating oscillator voltages on VFOs was a fixture from the late 30s on but is more critical on rigs like the Gooney where the tunable LO has to work at some pretty good freqs. This rig did not have Sillitronics disease while solving a much tougher problem. Haven't seen the glow of a xenon regulator in eons. Right up there with the nice blue glow of 866s running on 3-phase.

Left the web site for others. When are you starting construction on the Gizmotchy???

Dick N&#65533;BK

Dave (or Debby) is one of those types that whines about how all
the commies are trying to take away our freedoms, but in the same
breath tries to incite a book-burning bonfire. His type thinks that
if you read 'The Wizard of Oz' or 'Alice Through the Looking Glass'
that you are a drug-addicted heathen. Despite all the name-calling
in this group, Dave is a genuine goofball. We mostly ignore him.

Hello,
Are you still looking for a face plate?
I have one, but I will need to dig it out and look at the condition and get
back to you.

Hey, I think I stopped in that place before. Don't they sell those
100 watt light bulbs that will do 300 bird watts? Just down the
road from the Ace Hardware that sells "pure denatured alcohol" and
"extra strength acetone" (no kidding!)

I appeal to da Soopreme Cowrt, to ask da question: IS da fcc Constitutional, or is it part of da ememies domestic 6th plank 5th collumn pinkos, as one of da UNConstituional acts of socialist/communist Roosevelt!

Another one down, you commies may say, but I SAY another one may be comming up! JUST THINK, I know personally by listening that skip talkers have been around since the early 60's, maybe since '58 ! And when I wrote to one I heard on my N8 approved 100mw WALKI-TALKI (not a "hand held"--a yuppie term!) in the 60's, I wrote their PO Box down & wrote to dem & told dem I heard dem in Ohio from Colorado USA ! Dey sent me back a nawyce QSL card (did anyone ever get one of deez from N8?)! So what it boils down to, with all that +9 Heterodyne running on 27.185, I DON'T CARE WHAT PEOPLE SAY, CB SKIP TALKERS WILL BE ALWAYS HERE TO STAY !!!!
Dave!!!!!!!!!!!!!
CQ-N8, CQ-N8, CQ-DX-N8!!!!!!!!!!! ! ! !

I would be disappointed if anyone was surprised by this, just who do you thing we were working with when the
Afghans were fighting the Russians, just like when we supported Iraq when they were at war with Iran. Trying to maintain peace in the middle east makes for some interesting decisions.

In the UK, you need a TV licence to listen to TV frequencies on a scanner...
even though you are not watching a picture. But then I heard reports that TV
licensing (the post office) were going after truckers as they needed to buy a
separate licence for the truck.

Brainbuster.

If you have a difficult task, give it to a lazy person -- they will find an
easier way to do it.

While I too applaud the efforts of the FCC, let's not forget one of the most important aspects of this story.

>This is when
>the FCC
>received several complaints of a CB radio station operating with
>excessive
>power in Oklahoma City.

and...

>In denying Kramers appeal, the FCC's November 8th order says that
>its Dallas
>office has complaints regarding similar operations on two separate
>occasions in
>March 1998 and October 1999. In both of those instances, Kramer
>also
>voluntarily the offending equipment and on at least one occasion
>stated that
>the violations would not be repeated.

If you're straight with the FCC, I think they'll be straight with you. In over twenty years, I've never heard of a NAL being issued for a first time offender. That, of course, is not to say there's never been one. Moral: Take "extra" care and 73.

>
>Thx
>Bob D

Hi Bob,

The HTX-10 is unmodifiable in the conventional sense. However, I have seen the faceplate assy. and heatsink with the serial no. plate of a Magnum 257 swapped for that of an HTX-10. The result is a functional Magnum 257 that appears in all respects to be a HTX-10. A bit too much trouble for my tastes, but a handsome hoodwink nonetheless. BTW, this requires one of the earlier versions of the Magnum without the variable power knob, just like the HTX-10. A split-function squelch knob would be a dead giveaway. Take care and 73.

Hello ,

I have a President Dwight D base for sale. Has some extras. Radio is a 8 1/2 out of 10 cosmetically. It is an AM only 40 channel base with a flip clock. Comes with a black base D104 , dual keys ups - base + choker. Has two matching bookshelf Realistic speakers , sorry do not have factory president speaker. I am asking 150 dollars shipped anywhere in U.S.
Any questions or interest please email me.
Thankyou for looking.

>Not to make too much out of it but technically, CBers are users but not
>operators.

I think it's much more accurately stated that "users" are what CBer's were originally meant to be. Of course the band DID become a pseudo-hobby band, despite any written intentions to the contrary. I think it's safe to say the 11 meter "operator" is alive and well.

>Of course depending on who you talk to codeless Techs may or may
>not be Amateurs.

OUCH! Accurate statement, yet painfully indiscrete. ;-) Take care and 73.

Wot, not even once?

> Hi Peter, haven't been on the newsgroup in a while. Nice to read your
> posts...naughty lad you are. Take care and 73.

It's not really that naughty... they are only small, single tube units. It's
not like I stole the crown jewels, or even worse... threw litter in the
street.
Usually, I have one in use, and one on standby, for the heat given off.

They're electric room heaters, your honour.... works every time.

Regards.

Brainbuster.

>President or any other wide-range radio
>can increase his enjoyment of the use of
>his/her radio experience.

"Wide range radio"? You mean transmitting out of band? Just get a
transmitter and start bootlegging? You need a license to transmit on
10 meters. Anything outside the Citizens Band does not belong to you.
You are not authorized to ransmit there? Why would being ILLEGAL
increase someone's enjoyment?

>You may prefer to keep thumping your little
>drummer boy "illegal" drum but who cares!

I care. People like you spread the erroneous idea that the radio
spectrum is there for the taking.

>Leave us alone if you don't like us or what we do.

Does seeing FCC rules on your computer screen bother you?

(And who's "we"?)

Mark:

Thanks.. If I can do it, I see no reason why anyone else couldn't.

Despite the claims of SOME people on this newsgroup, 2M is not CB... although sometimes it seems to degenerate towards that direction. The most common problem on 2M repeaters is lack of courtesy, that is not allowing QSK's to utilize the machine right away. They may have emergency traffic. Another thing I've noticed on the repeaters is that some people tend to want to key up with "information" for someone calling someone else, or not waiting for a calling station to clear before calling them, which interrupts the answer of those who are returning. It's not as bad as people keying 4,000 watts on channel 19 while a poor truck driver is trying to get local information..

I've also run into a few bad apples on HF, too, particularly in the General portion of 40M. Some people just don't know what common courtesy is. Oh, well. That's why I upgraded.

I'll advocate HAM radio to anyone who asks.. but I WILL NOT do it to exclude CB. CB is still a worthwhile and fun hobby, regardless of anyone's Amateur status. I'm sure some of the other CB'ers here who are also HAMs will agree with me here.

I'm almost sure what my next call is going to be... but it hasn't been issued yet, so I'll just say...

Problem is that laws break down when you get away from the macro and into the micro. Gravity, space, time - quantum stuff, you know. Still not planning on jumping off a bridge, however.

...and you'd best learn Greek and read it as it was originally written.
The original greek says NOTHING against witches, witchcraft, etc..

BTW, for your information, Dave, a Warlock is not a male witch. The word
Warlock is derived from the Norse Waerlochen, which means, literally
translated, "Oathbreaker". A male Witch is still a Witch, unless he's a
Ceremonial Magician, which would make him a Wizard.

Just general information. 73 and enjoy your CB.

I'll tell you Brain, it was one of the funniest things
I've seen.
Their all proud: Antenna 10' off porch of the top
story of a 5 story apartment complex. I told them
not to run so much , but they said the box said it
could handle it. We're all in there partying and having
a grand time jabber jawing. Next thing I see is a
faint glow from the porch, I go and look and low
and behold the thing is on fire, I started laughing
as I turned around and barley could tell anyone.
It was just plain funny to see.

Great call Mark,
But unfortunately not all can afford the beam
set up. I would recommend a Macon 5/8 or if he
can find an older Penetrate instead of the Anton.
But if all else fails, it will work for him, just can't
run that type of watts.

Sounds like that kid's brain you met at the local RS
was still reeling over last evening's Rave Dance he
attended if you ask me!

I SERIOUSLY DOUBT that Radio Shack
is going to stop selling loose packaged electronic
components. If they do, it will be the greatest
marketing blunder since Coca-Cola introduced
it's "new formula" a few Years ago and IBM's
introduction of the MCA bus in the (thankfully
dead!) PS/2 product line.

If Radio Shack is going to stop selling components
they will become nothing more than an overpriced
copy of Circuit City and will go down the tubes
to full scale Chapter 11 Bankruptcy in less than 2 Years.

Count on it. Mark it in the book. Sell your RS stocks now!

Why would they stop selling items with a 2000% markup?

Ummm... It is illegal to TRANSMIT on CB frequencies with non-type
accepted gear and while running over 7(?) watts. It is not illegal
to RECEIVE CB frequencies. Oh, and it is illegal to be in possession
of an amplifier that will operate on 11 meters without a license.

"Landshark" <S3Buell@SBCGloboil.Net> wrote in message
news:9rRI7.12769$Yu3.909930629@newssvr21.news.prodigy.com...

But Leland, if you look at what's being said in
here..... talking, possession, admitting, pictures,
anything other than absolute legal is considered illegal.
By Aaron's standards, just that picture alone would
be enough evidence of him operating illegal, at the very
least promoting illegal activity with a ham radio.
But I have 3 2950's, 2 2510's, Magnum 257,
10 amps, but not an antenna on the house or truck,
so does that make me illegal? Of course not. But I would
say with the evidence before us, he is operating illegally
and should be turned into the FCC for investigation, per
Aaron and his Hitler youth rules.

in
the 30's,40's or 50's ?
Dave!!!!!!!!!!!!!!!!!!!!!!!!

No, faggotboy.

The REAL question is...isn't it true that you met Debby when she was a
suckslut for Ike Turner back in the 60's?
The way we heard it you were there applying to be the fill in
suckslut, and met her there.
Another part of the story goes that you still pimp her out to Ike once
in a while to supplement your welfare check.

Agreed Side, it's not fair.
Aaron(whoever it is) and the couple others
come here and claim what they are doing is
for the benefit of CB, it's not.
They are here to in cause hate & discontent
between hams and troll, that's obvious by
what is posted by them.

Well, economics is broken down into micro- and macroeconomics, so
why not physics, too? Or have they done so and just call the micro
by the name of 'quantum' physics?

> Still not planning on jumping off a bridge, however.

Just make sure you are tied off with some good elastic -- it's a
blast! Hint: don't eat for several hours before your first jump.

What you are doing is messing it up for the rest of us, so why
should we leave you alone? I would like to see some positive
changes made to the band, like more channels, no DX limitation,
and more modes. But that won't happen as long as there are a
bunch of spoiled 'children' on the band that think it's a hoot
to mock the United States and abuse some hard-earned freedoms.

Some of us like the Citizen's Band just the way it was intended
to be when written into law. If you don't like that, then leave
-us- alone.

5776. Damn engine noise

A mate at work has a UHF in his car and it gets a LOT of engine noise. Now I could use some ideas to eliminate or reduce engine noise, I've done the following. We put a RF choke on the CB's power line which reduced it a bit. His coil is already supressed. I unpluged the aerial from the CB and the noise was almost completely gone. Therefor the noise is on the aerial side rather than the power supply side. Could anyone please give me some ideas for reducing noise on the aerial side.
Cheers,
Greg

I'm not too sure that CB was -not- intended to be a hobby. It's
clear that it was intended for business and personal use. So
wouldn't a hobby be a 'personal' use?

Greg,
Start by seperating and shielding the noise source from the antenna.
Do that by grounding the various body parts of the vehicle to the
chassis/frame. Seperate the two, antenna and engine as much as possible
(not too practical, but do the best you can). Make sure all the
feedline shielding is in good shape, the connections tight, and make
sure the radio it's self is grounded properly. You might add another
stage to the RF choke in the power line too. After all that, have your
friend take off all his clothes, paint himself blue and dance around the
car... It won't help a bit but be sure and get pictures.
'Doc

40 watts can easily do that. Hell, with just 100 watts I used to turn
the neighbors touch-sensitive lamps on and off whenever I worked
28MHz. The problem only affected those within about a 20 yard radius.
It was bad enough when I worked SSB, only the peaks would trigger the
lamp, but on CW, it was driving them crazy. The station was clean,
too. Everything grounded, antennas were VERY well matched (over the
28MHz band, without antenna tuner, SWR no worse than 1.7). Changed
from a pair of co-fed inverted vee's to a Carolina Windham and the
trouble seemed to reduce in severity, although I STILL will
occasionally trigger the lamp. It's easy to see how 40 watts into a
poorly installed system (the guy's working MOBILE for Christ sake, how
GOOD an installation can he HAVE?) can cause problems with receiving
equipment around his operating area.

You're as much of a jerk as everyone else in the group says...

No biggie... Just pointing out that ATTEMPTING to make contacts
beyond a 155 mile range is a violation of part 95 rules. If someone's
going to engage in an act that is illegal, I feel it's only right to
point out to that person that they will be breaking the law. That
person can then make a intelligent, informed decision on whether or
not they want to engage in that activity.

That is clearly an option, and one that I would support. Personally,
I've sat here and heard the skip come rolling in, knowing I could make
contact with any number of DX stations, should I be inclined to
flagrantly and knowingly break the law. Of course, that was my queue
to warm up the 6146's in the old Kenwood and do some work on 10....
The no DX rule on an HF band is unenforceble, and should be dropped,
but as long as it's in place, good operators will abide by it.

Don't know, but it's possible to run a clean mobile, too..

I would believe 400 watts could do all that over the wide area the
article talks about, but I don't believe that 40 could on such a regular
basis, and over such a wide area, as the article suggests.

-SSB

"Good enough"? You mean an "illegal enough". -Aaron- >
No, Aaron, I meant what I said. A good
radio, be it a Ranger, Yaesu, Kenwood,
President or any other wide-range radio
can increase his enjoyment of the use of his/her radio experience. You
may prefer to keep thumping your little drummer boy "illegal" drum but
who cares! Opinions are like noses and everyone has one. Mine is
that you must be an egotistical, hypocritical, boring excuse for a human
being. Leave us alone if you don't like us or what we do. I have read
about you in this newsgroup and it would appear that you are a reaction
seeker. Well, you got one.
Now go away, jerkoff. Go interact with your fellow HAMBO's or have they
already shunned you for a simple read of the comics in the newspaper!
AARON= Asshole Aint Right, On Narcotics !

Sparky jockeyed for attention with:
Which doesn't detract from the fact that he's right, operating outside
the 40 without a license is illegal, and can carry a pretty heavy fine
if you get caught.

"Sure, they can throw you in jail, but the fact remains they HAVEN'T and
won't unless you give them a reason, and freebanding ain;t a reason."

It was more than just a marketing blunder. They had invited Mucrosoft to jointly develop the operating system for the PS/2 systems. No prizes for guessing that OS/2 was mucked up so badly that it was not ready for the launch of the PS/2 systems.

> If Radio Shack is going to stop selling components

Considering that the markup on those parts is more than anything else that they sell, it would definitely be a mistake. Don't just sell RS stock, short it!

You're as much of a jerk as everyone else in the group says...

"And you're an infected disgruntled hammie to come in here and start
hurling insults and calling names."

No biggie... Just pointing out that ATTEMPTING to make contacts beyond a
155 mile range is a violation of part 95 rules. If someone's going to
engage in an act that is illegal, I feel it's only right to point out to
that person that they will be breaking the law.

"But of course that only applies to cb from behind a keyboard."

That person can then make a intelligent, informed decision on whether or
not they want to engage in that activity.

"Or an incredibly intelligent decision that usurps your self appointed
role as playing selective enforcer."

True, so to those wo care; contact your local, state, and federal representatives and let them know that you'd like the unenforceable 250 kilometer rule dropped from Part 95.
Mark
--
That is clearly an option, and one that I would support. Personally, I've sat here and heard the skip come rolling in, knowing I could make contact with any number of DX stations, should I be inclined to flagrantly and knowingly break the law. Of course, that was my queue to warm up the 6146's in the old Kenwood and do some work on 10.... The no DX rule on an HF band is unenforceble, and should be dropped, but as long as it's in place, good operators will abide by it.

"Well then Ray, since the majorty of cb users are talking DX during the day, that would make them bad operators in your eye, correct?"

-export radios are only used to listen with -illegal cb amps are sold
for educational purposes -25 to 32 Mhz is abandoned -no FCC enforcement
-breaking laws is patriotic
-there's no crime unless you're caught
-etc. etc. etc.
-Aaron-

You seem obsessed with freebanders,CB users etc..

"Yes, he is, extremely so. It was a few of those that were responsible
for driving AA underground with logic. In a way, he is our creation.
Treat AA with any respect and he will bury his nose in your behind,
maybe nip a time or two.
  Best thing to do is treat him as your own as he responds better
when there is no doubt the handler is in control, except when talking
about cb. When speaking of cb, all bets are off, as AA exhibits a mental
retreat to a self-constructed but artificial delusional nebulae in which
only he dwells and through grandiose beliefs, rules."

I notice you post the same or similar replies to lots of posts.

"Redundant lies and self-contradictories are inherent traits of AA's
mixed breed."

and I assume your retired and lost interest in HAM radio and decided to
kill time in the rec.cbradio newsforums. Anyhow I guess everyone needs
some kind of crusade to feel important.

"He just needs us. Parasitic creatures are not satiated until they have
fed on the life blood of another. "

Kinda sucks. I was just at RS picking up a few components yesterday to
finish a project. Good thing I have an Active Component in the area.

www.digikey.com is a great source as well.

I understand that "Shelf Space" Is important to make more bang for the buck.

But unfortunatly RS is slowly molding themselves into just high priced RCA
retailer.

Would like a Cell Phone with that ?

You know if some really dumb moron is going to forge a post from me at least get the location of the Detroit FCC field office right. I can tell you for a fact it's not in Dearborn. Oh, the sig file is all wrong too. The CBers in the "rec.radio.cb" news group are really beginning to lose it.

A nice reasonably priced alternative to RS is either
MCM Electronics or Mouser Electronics. Shipping
is fast and reasonable and they will sell to the public too.
Their Catalogs are decent too.

An aquaintance of mine has been in the employ of the FCC satellite office
in Dearborn since the beginning of the month. The busts are coming down
on illegal cb and equipment manufactures.

Oh no, I don't know if I can sleep at night now after hearing this. I
better
go home and hide all my shit.

Hams should not be encouraging this type behavior
by freely giving mod information just to show off.(you know who you are)
This is the type behavior that ruined cb by messing it up for all of us law

abiding citizens.

Oh yes.....the Hams freely giving mod information ruined CB. Unfuckingreal.
I never met a ham yet that would freely give mod info on CB equipment
unless he was a Cb'er too. Most would sooner cut their left nut off than
help a Cb'er do anything.
Furthermore....I fail to see how mod information "ruined" CB. If anything
it
is better/quieter now than in the past 30 years I can recall. You can
actually
carry on a decent conversation pretty much anywhere you want with
a few exceptions where you get the music, incessant blabbering etc., and
I guarantee you will find all that same garbage going on right on 20 & 75m.
And.....I would sooner see a ham giving out useful information, rather
than that wonderful representative of hamdom N8WWM and other
garabagemiesters (is that a word?) in here posting
under more names than you can count on both hands and feet with
totally usless shit.
Mr. K

> It wasn't much, but it was enough to cause a problem.
......snipped

I was going to take issue with this last statement but nevermind.

My thoughts run like this. It's possible the antenna has some bad internal/external connections that would produce noise when rf power is applied.

I would also suggest that if some part of that antenna is resonant at or around the fm broadcast band, you may also be subjecting your PA to several strong Fm broadcast signals which might mix in your PA and produce a fairly strong group of IM products when you transmit your own contribution to the mix.

As mentioned earlier, you may be producing the spurious products that either fall in the fm broadcast or add to some non-linear device in the area.

Adding a lowpass filter was a good idea but not necessarily a cure. You would need to plot the response of the filter to see if it provided substantial attenuation in the broadcast band. If it did then either the mix is ocurring outside of the radio or is of suitable strength that the filter cannot reduce it sufficiently.

I doubt the antenna is junk just because it shows a response on other frequencies. Most antennas will be resonant elsewhere.

Im inclined to think there's a bad connection somewhere in the antenna or connectors that is acting as a non-linear device.

Neither one Phil. Seems like there is a CBer, who goes by the Handle of "Twistedhed", on the "rec.radio.cb" news group. He made some comments about freebanding etc., and I suggested that he contact you since you had in fact worked for the FCC doing some enforcement activity, and could give him the straight deal right from somebody who has done it. Needless to say he wiggled every which way he could to avoid the issue that he does not have to courage to contact you to ask some questions. In fact he's mad as heck about be branded a chicken on the group for not contacting you. So he spends hours forging messages from me (there are several on this group alone right now), or several others, as a means to get even, and hopefully to discredit the "framed" individual with obvious crazy comments in the messages. However it seems like he can't even get his facts straight for something as simple as the location of the Detroit FCC field office.

I haven't heard anything about a reduction in parts, but I have been a faithful purchaser of Radio Shack batteries. I have been involved in the battery club, because you buy three packs of batteries and you get 30% off the purchase. Also, every third purchase, you get either a free 2 pack or 4 pack of batteries.
I went into the local RS and they told me that at the end of the year, they are no longer offering the battery club and that they weren't allowing anyone to take advantage of the 30% off at that time.
I thought the guy was full of S***, but after talking with a friend that works at a RS in another city, I have found that it is true. That sucks.

Guy P. Distaffen:

you are not alone my friend, we all grieve the loss of the Radio Shack Battery club. but alas we have our fond memories. i used to proudly walk into Rat Shack... and grab a pack of their puke green colored AA's... then i'd go to the register. after they asked me for my name, phone number, blood and urine samples, i would reach into my wallet with glee and announce that i have my trusty battery club membership card. while they were busy with it and scamming me about how they don't have anymore catalogs, i would insert the AA's into my walkman. i would purposely turn up the music so as to not hear their latest excuse of how aliens sabbotaged the machines at their catalog manufacturing facility. i would then turn and walk towards the door... sometimes, if i was real lucky and God was merciful, those batteries would still be working when i got to my car. membership. ah yes, it had its privledges.

phil :)

> Aftrall, you have forged people yourself.

You would be suprised to find out that I don't. And since I don't in over 2 years on this group NOBODY has ever PROVED I have done so, even you can't prove it. Several others on this group have had their accounts canned and no longer post through their orignal ISP, however I do. That's becasue anyone silly enough to send a complaint to my ISP gets the complaint canned becasue they have the posting logs and know for a fact what everyone on this group can only guess about, incorrectly that is.

However on the other hand you seem to like making late night phones calls until you discovered the calls you made got traced back to you. The phone company will and does prosecute people for that crap Mopar.

Given that bit of B.S. Mopar I would not put it passed you to take the same route like Twisted, and several others, by posting forged messages in various news groups. You can't intelligently debate the issues can you? And you don't have the guts to post your real name here either. You and Twisted look good together taking turns sitting on the same clutch of eggs.

The Commission would find it difficult to justify granting additional
privileges to a service that has demonstrated no self-policing ability
whatsoever and a historical record of moving onto frequencies that
belong to others.

With Mouser its best to purchase online, or at least verify stock
online. Your order can easily get divided up in pieces because of
occasional backorders and if the original order said priority mail, then
you'll be getting one-off parts later at $3.50 minimum shipping each.

Tandy is based here in Fort Worth, and they do some strange stuff, there are large buildings here that are setting empty, because they abandoned the product line these were making, they started some other conpanys then closed them, not buying competition to close them, starting them themself and then closing them, so it is no telling what the genus behind Tandy is up to now.

5842. cb and ham antenna

Newsgroup: rec.radio.cb
Date: 2001-11-19 22:21:24 UTC
From: anpap@my-deja.com
Message-ID: <c106891e.0111191421.5f6ffe93@posting.google.com>
Source record: 104854
Cross-posted to: rec.radio.cb,rec.radio.amateur.antenna

I just got a small mobile CB to put in my car.
Since there is the possibility that I will also get a VHF/UHF
mobile in the future, I was thinking of buying a good antenna
that can be used with both. Is this possible? I am thinking that
it won't be easy since there is a big difference between the
27MHz of the CB and the 170MHz of the VHF amateur band. On the
other hand I am new to all these and I may be missing something...

thanks,
Andreas

It's too big in size, too much money for the available output of the unit, and TNT amps have a nasty habit of blowing line traces off the board. Get yourself something along the ling of a 5 or 6 pill unit from any of the "custom"
builders and you be much happier. While the 600+ would do just that output wise, you can get the same out of 2 driving 4 rather then the 8 x 2290's in the unit.

So why are you so worried about my comment then? Funny how the phone rings, then I post a message a minute later after the call, then you call ragging about my comment a minute after that, then a message appears on the news group (from you) with the same comment only in written form. I next post a message about the calls being traced, and guess what Mopar, no more calls. Gee, and you are going to tell me it's not you? Then considering all the nice offers you made to come up here to meet me after the phone deal, even Twisted is a better liar than that!

2950 or an 88 would be a better choice than the 99 unless you have to have the galaxy with the big meter. While the 99 does have a different echo feature and the large meter,that's about it for being different than an 88 and the 88 is a bunch cheaper. If you can locate a 2510 or Lincoln in PRISTINE condition they would be a good alternative also.
Good luck with whatever radio you choose......

AMEN BROTHER !

Yeah praise Yaego carbon film resistors - the time of the END is at hand!

Why just today I heard (YEAH!!), upon reading this sorrid
news (HAJAHHH!!) of soon no more blister-packed
470uF/35V electrolytic capacitors, that no less than three
(...OHHHHHHH GHLOOOORYYYY!!!!!!!!!) cyber geeks at TechTV
broke down and bawelled like babies (HAWWW!!!) and
were useless for anything for the rest of the day.

Grown men with BSEE and BSCE shakin like dried leaves
in the wind on da ole oak tree!! (....HOOOOOO GLORY!)
No more Korean 2N3055's 2-to-a-pack! They gonna shake
rattle and rollllll (...AMEN - PREACH IT BROTHER!!) like
crackwhores that can't get their daily fix! (HOOOOO WHEEEW!)

SOMEBODY SHOUT A M E N ! ! !

---------- END ----------

FYI: Northern Alliance is today supposed to be disarming the
population of Kabuul. Those who don't give up their weapons will be
arrested/shot/jailed. I wonder how long it will be before GWB has turn
around and treat them like the Taliban? The nooz folks have yet to
point out a lot of these people fought **for** the Communists in the last
big Afghan war. The whole F-N Country of Afganistan is one huge
rock pile that looks like 50 Years after an atomic war blasted it to
shit. Mix in a couple hundred thousand bearded, horny, camel and
young male homo-butt plugging quasi-religious fanatics and you got
the big picture of what the place is like. A giant sandbox/rockpile
filled with unwashed males badly in need of some poontang or same
or camel sex - doesn't matter 2 them. (ITN news repored
that young male cameramen were propositioned for gay sex

by Northern Alliance soldiers several times during a recent visit)

What a place we got here eh !!??

My fondest memory of Rat Shack would have to be going in the mall locations (4 of them at the time) and set an old TRS-80 up to scroll "RADIO SHACK SUCKS" and then and in a few POKE numbers to disable all the controls and the keyboard. It would take the twit working there about the same amount of time it would take for us to grab an Orange Julius and get back to watch the poor schmuck have to unplug the machine and reload that pile of shit with the cassette tape drive.....And that would go on for about 15 minutes! I don't know if they ever figured out how we disarmed all the controls but it was funny as hell!

Hi Raymond,

That's encouraging to hear. The current batch of bumper stickers are almost gone. Lest it be said that I'm an unreasonable man who doesn't take heed of friendly advice, the next batch will actually be "lightened up" a tad. Instead of "I Work 11-Meter DX... & I Vote!," they'll read:

RM-9807, Gone But NOT Forgotten!
Remove The 155.3 Mile Limit On CB.

Altogether much more reasonable. Shall I send you one, Raymond? Perhaps as a novelty keepsake. This will likely not come to fruition in our lifetime, but hey...you never know?! On the off-chance it should ever occur, you can tell your grandkids that you knew the "lunatic" that actually may've helped make it happen. If not, it'll be like having a "George McGovern For President!" bumper sticker. ;-D <ggg> Take it easy now.

Very 73 de Bert

Your feelings are 100% correct, more like 92 actually. Mobile antennas have to be resonant at an odd quarter wave in most cases so the 5th harmonic of 27 being pretty close to the two-meter band (144-148) at first gives you hope that a plain 9ft whip would work. The problem is that antennas beyond 3/4 wave tend to end fire which would give you a great radiation pattern straight up on VHF.

If you went to a base loaded antenna, the VHF would simply disappear in the rf choke the loading coil would present. Continuously loaded antennas, sometimes known as helical dummy loads, might do anything.

In theory, but this would be one of the great miracles of all time were it produced in spite of it being a very saleable product, some kind of trap vertical could be built which would more than likely look like a nine-foot whip with a funny box up 18 inches.

You may also get interested in 440 where the two meter whip will load nicely as a 3/4. Purely personal opinion: a 5/8 mobile is more mythology than reality.

It is really too bad that the whip comes close to resonance; otherwise you could simply build a little plate for the top of the spring and feed both together. This stunt is used on the Hy-Gain Hy-tower to feed 80 and 40 verticals from the same coax.

Jay, wade in on this one and make yourself a few centavos.

Dick NBK

Neither one Phil. Seems like there is a CBer, who goes by the Handle of "Twistedhed", on the "rec.radio.cb" news group. He made some comments about freebanding etc., and I suggested that he contact you since you had in fact worked for the FCC doing some enforcement activity, and could give him the straight deal right from somebody who has done it. Needless to say he wiggled every which way he could to avoid the issue that he does not have to courage to contact you to ask some questions. In fact he's mad as heck about be branded a chicken on the group for not contacting you. So he spends hours forging messages from me (there are several on this group alone right now), or several others, as a means to get even, and hopefully to discredit the "framed" individual with obvious crazy comments in the messages. However it seems like he can't even get his facts straight for something as simple as the location of the Detroit FCC field office.

Another big advantage to Mouser or Digikey is their wide selection of products, and no cheap junk parts that only work "sometimes". Even if you only need a simple ceramic cap, they offer it to you from several different manufacturers, none of which are Taiwanese junk.

It is a sign - of change. Sure, you could buy some transistors, resistors, caps, make a circuit board, and build an op amp. Isn't it easier just to buy the IC? Now (actually, for quite some time now), whole subsystems are built on an integrated circuit. Why build a vfo? Heck, direct digital synthesis has been around for a while - and I see a signal generator around which offers 1 ppm accuracy (not terribly accurate, but reasonable), resolutions in MICRO Hertz, and quadrature output to boot! Hmmmm ... suddenly, SSB becomes easy to generate without filters. Same thing at my job. Tooling for manufacturing widgets by the millions used to be pick and place. Today we use robots. Sure, the robot may at times be a bit more difficult to service, but there are no air cyliders developing blow-by. They sure need less service than the old pick-and-place. They are quite capable of picking and placing to thousandths of an inch and are a whale of a lot easier to set up (programming is easier than machining and dropping numbers into a table is real easy compared to moving tooling around). The CB vs amateur, code vs no code - heck, regardless of our personal convictions, most of us (cb and ham) ARE appliance operators guys!

Yep! Anytime I read somebody who thinks the King James translation is the
do-all, be-all of
Bibles, I instantly know who the "goofy" ones are. They are the ones who
know NOTHING about
the original Greek and Hebrew texts. They are the same ones, often VERY
uneducated preachers
that preach like this: AND-AH THE LORD SAID-AAAH, YOU'RE GOIN' TO HELL--AH
IF
YOU DON'T REPENT-AAH! HALILUYAH-AAAAH! PRAISE GOD--AAH! Every few sylables
are punctuated with that dumb 'AAAH' thing. Wassup wid dat?

Now, personally, I LIKE the King James translation. For some people, the
Thee's, Thou's, and
Art's are confusing, so there are other translations that fit with modern
language instead of Olde
Englishe. When KJ was written, THAT was the way of speaking, but King James
translation is
NOT the original text.

AARON!

(Sigh) Read his email address--he HAS a Canadian callsign. And, face it, like it or not, those illegal Cbers (sometimes) have that knowledge. So, it's not illegal for a CBer to tell a ham how to do this, the CBer just can't use it on 10 without a call--not that that's stopping them. Knowledge is NOT illegal, just the use of said knowledge outside of privileges granted to a licensee. And, even in the absence of a paper "license", CBers are still "licensees". Therefore, if a CBer assists a ham in attaining a modification, there is no illegal act. Incidentally, there IS AM Amateur activity on 29.000 Mhz--I know, I sometimes indulge in it...as my license allows me to do.

This "trash" as you have labeled it, has promoted reading in the youth of America to an all time record high level. As far as witchcraft, etc, this is a story. It is only a story and children know it is fiction. They are expanding their horizons and they know it is all fake. But they read and that is the godsend. Keep your hypocritical rantings between yourselves and your friends. Those of us educated citizens wish not to waste out time on such tripe!

Unfortunately, 2M and 11M on one antenna is not likely going to happen.
However, you can do 10M and 11M on the same antenna. For 10M, use a 9' whip, and leave off the spring.
I have a roof-mount center-load with quick-disconnect mount, and a pair of antennas, one 11, one 10.

(and two glassmount dual banders, and a DF array, and a huge 2/440 super-gainer, and a scanner antenna, and a gps antenna...) I need a bigger car. :)

--
Dave's Engineering Page: http://www.dvanhorn.org

Got a need to read Bar codes? http://www.barcodechip.com
Bi-directional read of UPC-A, UPC-E, EAN-8, EAN-13, JAN, and Bookland, with two or five digit supplemental codes, in an 8 pin chip, with NO external parts.

>
> Im inclined to think there's a bad connection somewhere in the antenna or

> connectors that is acting as a non-linear device.

First, there are three joints - two solder joints and the threads.
Both solder joints were resoldered and the threads cleaned. No change.

Second, the only way to eliminate the noise was to replace the antenna.
A low-pass filter did not attenuate the noise at all, not even a little.

Third, the antenna showed the same noise when used on a different rig.
The problem is the antenna. This is all bonehead troubleshooting.

After testing it on the bench with equipment that cost me a full years
salary, I am confident that the only problem with this antenna is just
piss-poor engineering. No hidden harmonics, no inadvertant rectification,
no cross-modulation -- just overpriced, noisy junk. That's all. It's a
classic case of the simplest explanation. BTW, the adjustment core is
solid iron, totally ignoring the basic RF practice (necessity) of using
ferrite to reduce eddy current losses. On top of that, the cheap PVC
jacket was brittle enough to break apart without cutting. And to think
that someone actually paid money for it...

Neither one Phil. Seems like there is a CBer, who goes by the Handle of
"Twistedhed", on the "rec.radio.cb" news group. He made some comments about
freebanding etc., and I suggested that he contact you since you had in fact
worked for the FCC doing some enforcement activity, and could give him the
straight deal right from somebody who has done it. Needless to say he
wiggled every which way he could to avoid the issue that he does not have to
courage to contact you to ask some questions. In fact he's mad as heck about
be branded a chicken on the group for not contacting you. So he spends hours
forging messages from me (there are several on this group alone right now),
or several others, as a means to get even, and hopefully to discredit the
"framed" individual with obvious crazy comments in the messages. However it
seems like he can't even get his facts straight for something as simple as
the location of the Detroit FCC field office.

ive been running a 1KW amplifier for about 8 months now on the breaking channel and been sitting next to it to keep warm...the problem is that all my hairs falling out does anyone know whats causeing this please,i also get bad head arces when i transmit alot...

As it is fairly likely you haven't had a bath in 8 months, it is fairly probable that the arcs are lice being done it like a bug zapper and this is irritating the hell out of the field mice in your hair who in turn rip it out to try to get some sleep.

Just a guess tho.

You got that right. Listen on the 10 meter cw band sometime.

> Knowledge is
> NOT illegal, just the use of said knowledge outside of privileges granted
to
> a licensee.

Agreed. No one wants to censor or outlaw the exchange of knowledge.
However there are times when the exchange is highly inappropriate.
Like showing grammar school kids how to build a pipe bomb with match
heads. Or explaining to junkies how to enchance their heroin highs
with chemical additives.

> And, even
> in the absence of a paper "license", CBers are still "licensees".

And those licensees are granted a license on the condition that they
agree to obey the rules.

> Therefore, if a CBer assists a ham
> in attaining a modification, there is no illegal act.

No one is disputing that.

> Incidentally, there
> IS AM Amateur activity on
> 29.000 Mhz--I know, I sometimes indulge in it...as my license allows me to

Yes, I listen there often. Do you hear the spurs and splatter from
the illegally amplified CBers up there?

-Aaron-

Not only that, what you don't really hear much is that the
"withdrawal" of the Taliban consists both of fighters moving
out of the territory, as well a large proportion of fighters
changing sides to the Northern Alliance.

Oh... that's all right then...

The king is dead. Long live the king.

Sure. If you don't have the manual, get one and ship it along with
the radio. But be forewarned that those manuals are so expensive
they almost make repairs impractical. $90, last time I checked.

Bert,
You must be in the wrong newsgroup. Yours appears to be the
voice of reason and intelligence. Absolutely, would love to have one
of your bumper stickers. Feel free to send one. Contact me via
e-mail, I'll send you the address...
Makes much more sense to work to remove the 155.3 mile
limitation on allowed CB contacts than it does to simply disregard the
rule and violate FCC rules. Good operators work to change the rules
to make the hobby better for all. BAD operators tend to have a "screw
it, I'll do whatever the hell I want to do" type of attitude. Good
operators keep their equipment and operating privileges. BAD
operators have skulk around in secret and anonymity for fear of having
THEIR equipment confiscated and their operating privileges curtailed.

The article states that the complaints came from a large area, yes.
But it does NOT say that the complaints indicated that the large area
was affected AT THE SAME TIME. As a matter of fact, my impression
from reading the article was that the guy was moving around and
operating, and everytime he moved, he would affect people in the
immediate area. This would affect a large number of people in a large
area, but at different times.

of CB users are making DX during the day... But regardless, the ones
that ARE, are indeed BAD operators. I thought I had made that point
rather clear.

I was not playing enforcer. No threats or directives were issued. I merely pointed out to the person asking the question that working DX on the CB bands was illegal in the US. Would you react the same if I pointed upwards to a grey and dreary sky and said "it's cloudy today?"

You're right AB7, there are actually 6 SSB military frequencies between 27.4 and 28.0. However these frequencies are now only used as an alternate depending on propagation. I hope no one is ever stupid enough to try to jam or have a QSO on these freq's while they are in use because the wrath of god will come down on their position via AWACS and the direction finding Rhombics in Virginia.

You know Leland, I always thought you
were just trolling here for jollies, but I see
that this is real serious stuff to you LOL.
The phone company traced the call? you
found out it was Mopar? The phone Co.
will only ask you if you know someone
at this #, they can not give you the name
of the person who has that # it's against
the law. But don't tell me, you know
someone there too, FBI, FCC, CIA,
NSA, ASPCA boy you have all the
connections.....LOL.

"Phil Kane" <Phil.Kane@no.spam> wrote in message news:cuvyxnansvbet.gn218rc.pminews@or.news.verio.net...
      Either your acquaintance is falsehooding you or you are doing it to us.
      Which is it?

Lelnad spat:
Neither one Phil. Seems like there is a CBer, who goes by the Handle of "Twistedhed", on the "rec.radio.cb" news group.

"No. not "seems like", Lelnad, I really am on the "rec.radio.cb" news group."

He made some comments about freebanding etc., and I suggested that he contact you since you had in fact worked for the FCC doing some enforcement activity, and could give him the straight deal right from somebody who has done it.

"'Fraid it was you that made the comments, Lelnad. You claimed enforcement that simply does not exist in the manner you claimed. Simple. I asked you to cite a single credible media source recording an instant where a cber was sent to jail or convicted as a criminal for simply freebanding or DXing, that's all. Unable to back your anger laden words, you blew up, called me all kinds of names, hurled insults at me, insisted I follow you to another forum, and as a last pathetic attempt, tried to get Jerry O involved, and then some guy named Phil, that you claim worked for the FCC.
  You just couldn't help yourself and damned if you weren't going to drag me into a hammie room with (gasp) surprise......the one you attempted to get me into a dialogue with previously...a friend of yours named Phil. Bound and determined full of malice, now you not only crosspost in a sad attempt to get me into your hammie room, you spin a sad forge yarn that wasn't even an issue until you brought it here.
  I'll say it again...I have no interest in your sordid affairs in the realm of your hammie domain. "

  Needless to say he wiggled every which way he could to avoid the issue that he does not have to courage to contact you to ask some

questions. In fact he's mad as heck about be branded a chicken on the group for not contacting you.

"Oh, come, come now Lelnad. If one would be so inclined as to examine the exchanges we had on this subject in the past week, one would arrive at the logical conclusion that you were again under the influence, clearly demonstrated by the mere suggestion that anyone was angry other than yourself."

So he spends hours forging messages from me (there are several on this group alone right now), or several others, as a means to get even, and hopefully to discredit the "framed" individual with obvious crazy comments in the messages. However it seems like he can't even get his facts straight for something as simple as the location of the Detroit FCC field office.

Uh oh, a CB'er who doesn't like illegal operation. You guys better nip this in the bud! Watch and see Twistedhed and the other keyclown posse members leap on Mr. Sirois with personal attacks until he's driven away.
-Aaron-
--
I guess you are picking up where 'Nad left off, paging me over the weekends. Wouldn't your statement above have had merit if you would have posted it prior to my non-attacking response to Ray instead of after the fact? No matter.
Ray doesn't usually get personally insultive and is quite capable, unlike you, of holding his own. You're the volunteer nobody wants."
--
Ray replied with:
You're as much of a jerk as everyone else in the group says...

"And you're an infected disgruntled hammie to come in here and start hurling insults and calling names."

Ummmm, check out what TRAIN said. I was not the first to hurl insults or call name...

"The very kennel organization whose door you are knocking on claims you are no better than anyone you disagree with if you bitch about their actions then do the same. Guess maybe you want to telegraph some of that hypocrisy to the newbies who don't remember you then, eh Ray?
Personally, I thought you a little above these clowns, but you're welcome to be associated with the trilogy of trouble if that's what you really wish, they have been begging for others to join their trolling trio for 2 years."

You CB Blinders get in the way of seeing that, did it?

"I have many other interests besides cb."

No biggie... Just pointing out that ATTEMPTING to make contacts beyond a 155 mile range is a violation of part 95 rules. If someone's going to engage in an act that is illegal, I feel it's only right to point out to that person that they will be breaking the law.

"But of course that only applies to cb from behind a keyboard."

Hell, that doesn't make any sense at all! CB from behind a keyboard? What the hell is THAT suposed to mean?

"It means, that when you claimed that you feel it's only right to point out that a person is breaking the law, you would only do so from behind a keyboard and wouldn't apply those rules to anything else in life except for cb. If you claim otherwise, please inform us of the details concerning your last citizen's arrest."

That person can then make a intelligent, informed decision on whether or not they want to engage in that activity.

"Or an incredibly intelligent decision that usurps your self appointed role as playing selective enforcer."

I was not playing enforcer. No threats or directives were issued.

"No, you are above the threats Ray, I will give you that, but some that you rush to defend are the ones whomake the threats on a regular basis around here."

merely pointed out to the person asking the question that working DX on the CB bands was illegal in the US. Would you react the same if I pointed upwards to a grey and dreary sky and said "it's cloudy today?"

"And I have no problem with that. But you attempted to spin it and claim that you feel a compulsion to let someone know when they are breaking the law. I took issue with that statement because you were usng it to justify your previous actions and statements when that statement only applies to cb in your life."

Careful to avoid damaging your slime coating :) -Aaron-

"Why, AA. You made the statement not long ago that you have no need for
insults, that you merely point out illegalities, that you insult no one.
--
Not an insult.

"Then you admit you know not what you speak of."

  When you re-fill a live well you must avoid damage to the slime
coating.

"My live wells have no slime coatings. The quality of my baitfish are of
such standards, the finest restaurant in your town located on Desolation
row would serve it as a specialty seafood platter with scampi and break
your wallet. <g>
There are several shellfish one may also utilize to eliminate slime,
should it occur, and still maintain organic integrity."

Ask why at your local bait and tackle shop.

"You still manage some humor now and then, and that's good. I AM the
bait shop 'round these parts, at least on my end (east) of Cutter's
swamp run, north end of the bay on the cusp of the counties. Ditto for
the blue crabs. Shrimpin' ain't no good no more since the net bans took
effect. Come on down, I'll take ya fishin' (fer a discount) and I'll
even let ya' talk on my big water cb and say hello to your fellow
newsgroupies live on the radio. Guaranteed to get way up!"

DX is STILL illegal on 11-meter SSB in the US. True, so to those wo
care; contact your local, state, and federal representatives and let
them know that you'd like the unenforceable 250 kilometer rule dropped
from Part 95.
Mark
--
That is clearly an option, and one that I would support. Personally,
I've sat here and heard the skip come rolling in, knowing I could make
contact with any number of DX stations, should I be inclined to
flagrantly and knowingly break the law. Of course, that was my queue to
warm up the 6146's in the old Kenwood and do some work on 10.... The no
DX rule on an HF band is unenforceble, and should be dropped, but as
long as it's in place, good operators will abide by it.
--
"Well then Ray, since the majorty of cb users are talking DX during the
day, that would make them bad operators in your eye, correct?"

I sincerly doubt that the "majorty" (did you possibly mean MAJORITY?) of
CB users are making DX during the day... But regardless, the ones that
ARE, are indeed BAD operators. I thought I had made that point rather
clear.

"My goodness, Raymond. It's true. You are no stranger to the ways of the
trilogy of trouble if you are going to begin picking on typos now. And
after all the time and work you put in to presenting an image of a
semi-rational hammie among us lowly cbers. You appear to be meshing well
with the few nocodes among us who feel threatened when actually called
upon to discuss an issue and must use diversional tactics such as
picking on spelling, typos, grammar, insults, threats and accusations,
and well, ...you see what they have been reduced to.
You need to listen up on 11 meter during the day. Almost everything you
hear is DX during the daytime. If you aren't hearing anything at all,
you need new ears. Try sideband."

Well its been months since I have posted on this group and I am truly amazed at the pathetic persistence of those that have dedicated there lives to policing the rf spectrum. I mean what a life, its sad to say the least. I cant figure out why one would spend countless hours of back and fourth senseless post in effort to annoy those that freeband. What's Ironic is those that are getting paid to do the policing are not doing it and don't care to do it, so why don't these same people spend there time fighting those that are not doing there job? I mean hey, its there tax dollars being spent and all they care about its a couple of small fish "talking" about running 200 watt Palomars on the Internet. Go figure? What a sad example of people who get so caught up in the "hating" that they lose site of there original goal. That's to say if they ever had a sincere goal in the first place.

> "Leland C. Scott"
> <bullshit snipped>

> You're saying that the no-code test will give me more ?

Yup. More spectrum to legally use, and operations you can't even try simply because you don't have the space for it. I have been through all the reasons with Tim before and he couldn't dispute them back then any more than you can now. For example you show me where you'll find 6MHz of spectrum to run a fast scan TV station on 11m. I can do that on the 70cm band since there is 30MHz on that band alone, which equals ALL the spectrum from 30MHz down to DC of which 11m is just a tiny part. And you think you have it made because you use maybe 0.8MHz of that. Big deal, not.

> Get a grip Leland,that's bullshit !

It will, save you a few $7,500 fines as well. You can tell the FCC that their fine is BS and see what happens then. You'll end up like the jerk in Florida looking at multi $20K fines, and jail time too.

> Buy a fucking house,put up beams and long wires.

I already have "beams" and a "microwave antenna" for my portable satellite ground station. Like I mentioned to Tim in an E-mail, in a few years when the sun spots drop way down those multi KW amps will not even get you out of the state. But I'll still be able to work DX for whatever half of the world the satellite footprint covers when its in view regardless of what the sunspots are doing.

And all I need to do this it my Tech Class license Mopar.

>> Play with ground planes...

I built a few of them already too.

I've now got one vote for WM from the point of service and one vote for
RA from here. I need to reencode the music for a website again because
of a server crash. I just want to make them the popular format. Lack
of computer power is not a problem here. I've got 2 under my feet, one
sitting around unplugged, a small workstation in another room and a old
laptop I use for testing purposes. All with network cards. Spaghetti ne 1?

OK, that's fine.

> He still can not transmit at all between 26.965
> to 27.405 with that radio.

True.

> Pictured was that radio,
> mic plugged in, so he might be using it in that matter
> correct?

That's the sticking point right? Is it or is it not modified?

> Same goes for a cb'er, you would have to be caught,
> just an accusation alone is not evidence enough.

There are a number of CBers on this group who don't pick any bones about freely admitting to violating Part 95. In those cases who needs "evidence". Some of them you can even hear on the air as well. Of course if they lie about that then everything else they say falls under the same shadow as well, i.e. they probably lie about everything, thus their credibility goes down the drain.

> Correct by our "Own admissions" means squat to the FCC.

Admitting it to the FCC at the time has let several CBers get off "lightly", however lying about it, and forcing the FCC to produce evidence gets you fined almost for sure. They don't like people making their job harder to do so a bit of "Own admissions" goes a long way.

> They will have to catch you, just like if they caught Doug
> transmitting out of band on a rig not allowed on cb.
> That pictures says more than a thousand words, that he
> has it set up to transmit on cb,

All that picture shows is the rig is "receive mode" for a 11m frequency. There is no TX light on, and there is one right below the RX light on the front panel. I have the exact same rig so I know what it can and can't do.

>and "might" transmit there
> with it. You can try to defend it all you want, but if he
> has it set up there, chance's are he use's it.

And like I said before is the rig modified or not? Can you prove it one way or another from just what you see?

> Aaron (whoever) and others here had whined and cried
> all about pictures showing just amps (not adds) Radios
> (Not adds) explaining how they are showing off their
> new purchases.

Since you where a Ham you know exactly what Part 97 and 95 says about amplifers. The Ads for lets say DaveMade amplifiers, where is his "type aproval" from the FCC? It must be on record there for him to legally sell those amplifiers, and it makes no differednce at this point to whom sells them to. The simple fact the he does not have such type approval does make it a criminal offense to sell them, OR OFFER them for sale, that part in in Part 97 if you what to look it up. Thus he's a criminal. QED. AAron is right on the money with that one.

Now the second issue about simply "owning" an amplifier is a bit like telling a cop you where just holding the drugs they just found on you for a friend, their are not yours, and you don't use drugs. Likely ending you go to court and get convicted of drug "possession". It seems the FCC takes the same tack with amplifiers and CBs. If you are not a licensed Ham, and a 11m capable amplifier is found in your possession along with one or more CB radios the FCC will assume the amplifier has been used, and will likely fine you accordingly. It seems the FCC is not so dumb as to find the amplifier in the car trunk, the coax from the amplifier to the CB inside hanging loose, while the hapless CBer claims he "never had it hooked up" since the cable was disconnected. Yeah, right, I don't believe it and nether does the FCC. And since some of those cases made it to count, and the CBer still paid the fine, it seems the judge doesn't believe the excuses either

> They are criminals and lawbreakers,
> they never said they weren't hams, but that didn't matter,

It does. Hams need to be reminded they can't run their Ham gear on 11m.

> all that mattered was to whine about it. But here is a
> picture of Doug's radio, on a cb freq, mic plugged in
> so I would say that pretty clear evidence.

Clear evidence he's monitoring 11m. Remember the TX light is not on.

Correct, he can mod one, you forget, I was a ham at one time too, so I'm
well aware of the rules.

-OK, that's fine.

He still can not transmit at all between 26.965
to 27.405 with that radio.

-True.

Pictured was that radio,
mic plugged in, so he might be using it in that matter correct?

-That's the sticking point right? Is it or is it not modified?

Same goes for a cb'er, you would have to be caught, just an accusation
alone is not evidence enough.

-There are a number of CBers on this group who don't pick any bones
about freely admitting to violating Part 95.

"That's the sticking point, right? Just because you read it on the
internet it must be true, eh 'Nad?"

-In those cases who needs "evidence".

"Yea, we know 'Nad. We know your approach is to shoot illegal cers in
the head.(chuckle)"

Some of them you can even hear on the air as well.

"Well, several heard you on 27.555 on more than one occasion."

-Of course if they lie about that then everything else they say falls
under the same shadow as well, i.e. they probably lie about everything,
thus their credibility goes down the drain.

"Amazing. You just described the manner in which you are viewed."

Correct by our "Own admissions" means squat to the FCC.
Admitting it to the FCC at the time has let several CBers get off
"lightly",

"(sigh) More BS. Go ahead puff yourself up full of anger, attack and
insult and me now, 'cause here comes the request that compels you to
froth at the snout.....would you be so inclined as to include a

credible media link
to verify one of those court cases of a cber that the court went easier on for admitting his indiscretions of freebanding or dx activity?"

-however lying about it, and forcing the FCC to produce evidence gets you fined almost for sure. They don't like people making their job harder to do so a bit of "Own admissions" goes a long way.

"And again you demonstrate your lack of knowledge concerning the internal workings of the FCC. Go ask your friend about this one, Lelnad. The FCC's job is not hindered in any way at all regardless of an admitttance of wrongdoing or not."

They will have to catch you, just like if they caught Doug transmitting out of band on a rig not allowed on cb. That pictures says more than a thousand words, that he has it set up to transmit on cb,

-All that picture shows is the rig is "receive mode" for a 11m frequency. There is no TX light on, and there is one right below the RX light on the front panel. I have the exact same rig so I know what it can and can't do.
and "might" transmit there
with it. You can try to defend it all you want, but if he has it set up there, chance's are he use's it.
And like I said before is the rig modified or not? Can you prove it one way or another from just what you see?
  Aaron (whoever) and others here had whined and cried all about pictures showing just amps (not adds) Radios (Not adds) explaining how they are showing off their new purchases.
Since you where a Ham you know exactly what Part 97 and 95 says about amplifers. The Ads for lets say DaveMade amplifiers, where is his "type aproval" from the FCC? It must be on record there for him to legally sell those amplifiers, and it makes no differednce at this point to whom sells them to. The simple fact the he does not have such type approval does make it a criminal offense to sell them, OR OFFER them for sale, that part in in Part 97 if you what to look it up. Thus he's a criminal. QED. AAron is right on the money with that one.
Now the second issue about simply "owning" an amplifier is a bit like telling a cop you where just holding the drugs

"Your pathetic attempts of poor analogies fall on deaf ears."

they just found on you for a friend, their are not yours, and you don't use drugs. Likely ending you go to court and get convicted of drug "possession". It seems the FCC takes the same tack with amplifiers and CBs. If you are not a licensed Ham, and a 11m capable amplifier is found in your possession along with one or more CB radios the FCC will assume the amplifier has been used, and will likely fine you accordingly. It seems the FCC is not so dumb as to find the amplifier in the car trunk, the coax from the amplifier to the CB inside hanging loose, while the hapless CBer claims he "never had it hooked up" since the cable was disconnected. Yeah, right, I don't believe it and nether does the FCC.

"What you believe is immaterial."

And since some of those cases made it to count, and the CBer still paid the fine, it seems the judge doesn't believe the excuses either

They are criminals and lawbreakers,
they never said they weren't hams, but that didn't matter,

It does. Hams need to be reminded they can't run their Ham gear on 11m.

"No wonder the hammies use you as an outhouse. You try to tell them what they need as well. It has always been an issue of noncompliance/lack of control with you, Lelnad. If someone isn't in compliance with the twisted way you view the world, then they need told what to do or how to act by you. LMAO! Your lack of control over others makes you extremely hostile."

all that mattered was to whine about it. But here is a picture of Doug's radio, on a cb freq, mic plugged in so I would say that pretty clear evidence.

-Clear evidence he's monitoring 11m.
Remember the TX light is not on.

I could care less about somebodys underware.

Twisted would dearly love for people to forget about, but they're not going too.

"There are no people talking about my underwear, Lelnad, except you and the homo in Pa. It matters not how many times you prove your deference to me. Have fun with it."

Not a surprise. Windows is easier on the server folk and RA on us peasants.
As the new Windows pretty effectively demands WM be used, you may have a
short-term vs long-term problem. At least in the downloads I do, almost all
of them are RA.

He's still trying to compensate for his cowardice when I called him
on his bullshit a few months ago. He hides behind a radio and a ng,
and now he's trying to hide behind a telephone. Don't be suprised
if he hides behind the US mail, too -- he isn't enough of a man to
dish out his shit to your face. Unfortunately, sharkie defends his
cowardly acts. They are cut from the same mold, no doubt.

>newsgroupies live on the radio. Guaranteed to get way up!"

Yeah, yeah. I don't know what kind of fish you have down there in Fla.
but the slime in a live well is an algae coating that helps keep the
PH optimal for the fish, hence the warning to preserve it.

Seriously, I may be scheduled to travel down to Tampa Bay soon and
perhaps we could have a meeting to discuss the newsgroup. How could we
best arrange this? Do you have a phone number? Would we meet at your
(swamp) house? Or would you like to meet in some neutral spot? Shall I
assume you will be armed and arrange for my own security, or can we
dispense with that kind of nonsense?

Some topics I'd like to discuss:

-Xmas Cease Fire
-Establishment of borders between rec.radio.cb and
rec.radio.amateur.policy
-Hand over SD Jones to authorities
-Cessation of hostilities against Leland Scott

-Aaron-

Yes,

I DO hear the bootleg activity up there, and it pisses me off BIG TIME!! I just don't see why a
ham asking this question "encourages" illegal behavior. You, yourself, said below that the exchange
of knowledge is not illegal, so the original poster is not, IMHO, out of line. What am I missing here?

Thanks--I thought he was the guy.

My view on this is that I do not care if the guy is a ham or not--if he is doing something illegal, then
he NEEDS to be popped. I heard a "rooster' fight Saturday night on 3945 where 2 guys were
ruffling their feathers, posturing, threatening, and bowing up at each other. I recorded the exchange
but the tape didn't take. VERDAMMT! I have no use for hams who think that a mike is a place to
hide and swagger, rant and threaten, and break the rules about courteous and respectful behavior.
Nor am I pleased at the truckers that are all over 10 meters. I had one to tell me yesterday to get
off his GD F****** frequency. Say WHAT? Why you stupid, #%^@! no account so'n'so----
oops! Never mind. He came so close to getting caught while telling me this, but he was going the
opposite direction and there was a barrier, or I might have done a cross-over and turned him in to
Riley. A photo, a tag number and a little recording, and it would be over for him. ....Oh well.

I'm going to check it out and then I will let you know. It could be
"operator error" (ME LOL!), but
I suspect that the audio amp is blown. It also won't transmit, but I note
from the manual (partial) that certain programming configurations inhibit
xmit, so, being unfamiliar with this rig, I don't know if
the relay should fire or not--even if xmit disabled. It isn't now. I do
have a burned smell at the front of the radio. I have been extremely busy,
and haven't had time to really get into it--maybe tomorrow. One good thing:
the boards are plug in, so I am able to remove and check out the
boards for burned components. Thanks, and I will let you know.

Must be a troll. There is no F layer propogation up on those frequencies. Pretty much line-of-sight. There may be tropo effects, but linears are pretty much useless. The amateurs find good use for UHF using repeaters. If it weren't for the repeaters, you'd be limited to way under 10 miles mobile to mobile. With repeaters, that is a different story. Just talked to England a couple of hours ago using 6 aa alkaline batteries on an HT, thanks to the repeaters (10 meter link to the 440 link I used). As to FRS, even if you jam whatever FRS channel, you still aren't gonna hear anything comming back from more than a couple of miles.

95.194 (FRS Rule 4) FRS units.

(a) You may only use an FCC certified FRS unit. (You can identify an
FCC certified
FRS unit by the label placed on it by the manufacturer.)

(b) You must not make, or have made, any internal modification to an
FRS unit.
Any internal modification cancels the FCC certification and voids your
authority to operate
the unit in the FRS.

(c) You may not attach any antenna, power amplifier, or other
apparatus to an FRS
unit that has not been FCC certified as part of that FRS unit. There are no
exceptions to this
rule and attaching any such apparatus to a FRS unit cancels the FCC
certification and voids
everyone's authority to operate the unit in the FRS.

> the FRS channels? I'm looking for about 250W out.

You might do a web search for "T-E Systems."

They make high power amps for VHF/UHF ham
applications. They may have an amp for the
450 MHz FM ham band that makes that much
power and only requires a few watts of drive
power. Hopefully you have an early FRS radio
that had the potential to make more than 3/4
of a watt. If not, you'll have to start with a low
power amp, see what the output is, and then
buy a suitable high-power amp designed to deal
with the amount of drive power that the low-power
amp produces.

Good luck.

I am serious with most of my comments.

> but I see
> that this is real serious stuff to you LOL.

> The phone company traced the call? you
> found out it was Mopar?

The phone company maintains the records until either I tell them to go ahead and prosecute the person(s) responsible or decide to drop it.

> The phone Co.
> will only ask you if you know someone
> at this #, they can not give you the name
> of the person who has that # it's against
> the law.

It's very coincidental that the phone calls occurred within 1 to 2 minutes after I made my posts to Mopar in the middle of a rather long thread. Also very strange that after I posted a message to Mopar that the last call, the previous minute ago, was traced it, the calls, stopped right away. Also remember this all took place around 2:00 to 2:30 AM in the morning too, so I don't expect too many people to be up reading off topic material in a long thread where the replies are directed to Mopar, who at the time was extremly mad about my WTC vs. Part 95 tag line. His anger got the better of him and now all he wants to do is drop it, which I will be willing to do so long as he admits he was behind it. Twisted by the way doesn't have the balls to admit to anything including the many forged posts he placed on the group and else where. He's been caught in so many lies it isn't even funny any more.

>But don't tell me, you know
> someone there too, FBI, FCC, CIA,
> NSA, ASPCA boy you have all the

Let me set you straight about the FBI deal. I don't know anybody who works for the FBI. What I did say is I had a friend who was a "Federal Investigator", which could be anyone working for the federal government whose job involves any kind of investigative duties. I VERY deliberately did not mention which agency he works for. The FBI BS started with Twisted once

again doing his thing by spreading lies, and I am frankly shocked by how many stupid people there is on this group who realy believe him when it's been shown time and again where he gets caught in his own lies. I though the people on this group where smarter than that, looks like I'm wrong on that point.

Of course there is the point about all the so-called forged messages I made to the group. Why after 2 years there is still no convincing proof? Also why would I continue to post messages using my real name when I could so easly adopt a fake name, and hotmail account, to make my posts from. I certinaly would not have to put up with the likes of Twisted, Mopar and his late night phones calls, nor the rash of forged messages in other groups as well. I know very well how to do it, but I made a moral decision not to do so, unlike some of the cowards on this group who are posting the bogus messages. All the claims I posted forged messages come fom those who have run out of logic to debate the issues. I never needed to hide behind fake names to make my point and I never will.

Landshark,

What was I doing on "his" frequency? LOL! It doesn't work that way. He was operating an illegal radio on a frequency AND mode he is not licensed for--or even hams allowed to use in that part of 10 meters. 28-28.300 is digital modes only (CW, Slo Scan TV, Packet, Pactor, RTTY). Phone is not even allowed to hams in that part of the band. So a CBer/trucker operating AM and beepin' and squeakin' away is a dead giveaway to an illegal station--makes 'em easier to track. Moreover, because the trucker is flatly illegal, he HAS no rights or protection from amateur stations who may transmit over him--an illegal station cannot be interferred with. So I intend to go onto CW and call CQ right over the top of the bastards at 20+ WPM. And if I catch or spot one of the SOBs he will get identified (photo, company, tag number) and forwarded to Hollingsworth. I don't get too upset at the stuff on CB--that ain't for me to decide. But when they get in MY pasture, my turf that I WORKED for the right to use, yes, they have an enemy. The 10 meter issue is a sore spot with me, but OTH, it might have the effect of drawing attention to the stuff that is going on as these bastards stray all over the damned spectrum and cause most unwanted results. And, if so, then I will clap my hands with glee. I DO know that 10 meters will be defended, and it will be defended with the help of the hams themselves--you know; the guys that really have the right to BE there?

I've changed my mind... I will comment:

Hrm... I /dev/null that jerkoff, and the hits just keep coming.. I still have to read his drivel in the replies of others...

In actuality, it was only $40... $10 testing fee for the Technician and General Class written elements, $20 for the CW test (that I had to take twice), and another $10 for the Extra Class exam.

In addition, there was $900 more for the IC-706MkIIG, $38 for the G5RV, $42 for the Lakeview Dualband antenna, about $20 in misc. connectors, solder, and butane (for the soldering iron) for the coax (which I got for free years ago when MCB Camp Pendleton was rewiring their thick ethernet), about $180 for the Alinco AR-135T, $47 or so for the Radio Shack 2M magmount for the car, another $10 for misc parts for antenna experiments, and $22 for the 1/4 mile roll of aluminum electric fence wire (again, for antenna experiments).

After spending $1299 or so on this hobby, I didn't have another $50 to spare.. at least not for what PipeDream (whatever that is) is implying it was spent for. Implications like that are bordering on defamation of character, libel, or slander, which are punishable in most states in the US.

:;shrug;: I guess jealousy has reared its ugly head yet again. Ah well.

They realy don't have much choice in the matter.

> think the best
> thing for you to do is leave your phone off the hook or change your
> number.

I have an answering machine which I use to screen all my calls. I have never answered the phone until I know who it is. I would just assume to let the telmarketers waste their time for two or three minutes talking to my mcahine tha takes me all of 2 seconds to hit the delete button later.

>leland, you sir are a agitator

Being an "agitator" depends on your point of view. You are either for sane operation where people go by the rules so that all may enjoy the benefits that come of it, or you have the spectrum thieves who will take over whatever frequency seems to be unoccupied, which of course means the authorized user no longer has use of the spectrum whenever they choose to use it, the spectrum thief is using it. Same goes with amplifier use on 11m.

>who walks a fine line between legality and illegality

So if I did something illegal then jump right in here and point it out. In the past 2 years nobody else could find anything, and some have tried real hard too. LOL

6000. 18 DEMANDS FOR ILLEGAL KEYCLOWNS

Newsgroup: rec.radio.cb
Date: 2001-11-21 01:01:37 UTC
From: PipeDream <pipedream@hotmail.comspam>
Message-ID: <20011120200157.453$gB@news.newsreader.com>
Source record: 104963

18 DEMANDS FOR ILLEGAL KEYCLOWNS

1. Stop using illegal equipment to commit unlawful acts of bootlegging, high power operation, and splatter against CBers in the legal 40 and government and private users in the so-called freeband which keyclowns illegally occupy.

2. Obey FCC Part 95 Subpart D. End occupation of the freeband, the CW portion of 10 meters, and all frequencies below 26.965. End Keyclown illegality!

3. Obey FCC Rule11 - Linear Amplifiers. You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way. Allow lawful, legal CBers to return to the CB band, a band from which keyclowns drove them illegally over the past 25-plus years.

4. Stop promoting illegal keydowns as a recreational sport.

5. Stop promoting illegal freebanding and bootlegging as a hobby.

6. Stop acts of radio piracy which deprive lawful radio hobbyists of a positive public image.

7. Stop the institutionalized "outlaw" predjudice which treats legal CBers operating legally as second-class citizens while denying them operating rights in their own band.

8. Allow true freedom to promote legal CB.

9. Allow true freedom of speech for those who speak out against illegal CB.

10. Stop building illegal amplifiers and distributing them.

11. Return all frequencies illegally seized.

12. Recognize the existence of the FRS as a "no linear" zone.

13. Allow a peace-keeping force from the ARRL into rec.radio.cb to provide for the protection of legal CBers against acts of keyclown-sponsored aggression.

14. Apologize to proponents of legal CB for acts of aggression the keyclowns have committed against them for several years.

15. Apologize to innocent parties such as Dwight Stuart, Glen Sparks, etc. victimized by the keyclown's acts of aggression.

16. Turn TRA1N over to the FCC so that he may face justice for his radio crimes and crimes against legal CBers.

17. Accept responsibility for illegal operation.

18. Accept responsibility for the fact that keyclown aggression against the anti-keyclowns and others are the direct cause of continuing strife in the newsgroup.

The interests of illegal operators does NOT outweigh the needs of legal CBers.

The law-abiding CB operators are adamant that the keyclowns, bootleggers, and pirates immediately cease mistreatment of users whose frequencies they occupy illegally.

Uniden is good and don't laugh, but Radio Shack isn't bad. Stay away from the bottom of the line stuff. If you can find a radio that handles SSB in your budget range, get it. You're better off buying a new radio than a used one. People have a bad habit of opening the case up, fiddling with it, and then selling it off cheap when they discover that they screwed it up.

The ten meter thing is getting to be a sore spot with a lot of folks. With
I-80 going thru town we get a lot of it. The locals have rounded up some
junk cbs, some old security cameras, a right-on the-money clock (WWVL) and
VCRs to set up some traps on the Interstate to present mug shots and all to

Riley complete with the voices and frequency. With any luck we can get the feeds from existing cameras to play with as they are right over the hiway and the equipment will have a warm and dry home.

Who in hell do these clowns think maintains all that neat hiway hardware, the gnomes???

Dick N&#65533;BK

Get enough of us together and Riley will get writer's cramp signing his name.

PeeWee I think those numbers you gave on the 8 pills are right on the money, If some of these guys used a 2500 watt slug there feelings would get hurt by what they see.

2500 is about right for peak watts on a m800 at 15 volts. If thats what SD meant.

And I am "truly amazed at the pathetic persistence" of those who
think that anyone is trying to enforce federal laws on a newsgroup.
But it's just mindboggling how some will think that if they complain
enough that people who complain will somehow magically disappear.
(Did you see the catch-22 there, G?)

Yes I would hate to have you punch me out to. Would that make you feel better? Is that the type of person you are?

You going to probably have to stand on something, to reach me.

> > Ng group etiquette, and being a human being is something you should
> > learn.
> >
> Why should I learn it when you havent you are certainly not a role model.

Yes I am a role model, I am a bitchen guy. Just ask me!

> > Most bitchen people such as myself, make the rules as we go.
>
> Typical keyclown mentality, its ok for you to do it but not anyone else.
> Typical hypocrite.

George what can I say? Did you get beat up a lot at school? I told the truth, and you bitch, moan and complain. You remind me of the X wife?

"Yak yak, bitch, moan, complaine, rattle on, more bitching, more moaning, ect ect. Oh yeah the favorute: "You don't need another drink, keep your hands off me, don't track dirt in on the carpet, my Dad makes more that you, you don't need to turn on that CB radio, your friends arn't coming over again now are they, and another thing yak, bitch moan, complain, whine ..... ect ect.

Aarionist bitches way less than you.

I can see that your lack of addressing the truth chokes your commn sense, pity.

You left out

"Most bitchen people such as myself, make the rules as we go. Accomplishing tasks, making things, fixing things, having honey's adore us in the norm."

George there are the doers, and there are the whiners. You need to give up whinning, and take up on more social skills, like findin some CB Babe, to put a smile on your face, and a little zip into your life.

> > I guess thats natures way. Some guys are bitchen and some ain't.
>
> Oh yeah your a bitch alright.

Typical, "I want to be somebody, please pay attenation to me"

Hello All: This just in: Just got back into town, and ran by HRO, all I bought was a QST, but ....

Dec 2001 QST magazine, page 167. Someone is selling a Updated version of the old Globe King 500D AM Transmitter.

Originally manufactured in the 1950's by World Radio Labs, is now reintroduced with modern circuit updates. Uses a Peter Dahl Hipersil Transformers, stable VFO. 500 watts of plate modulated AM input to a 4-400 finial for full power output.

Each "Globe King 500D" is carefully hand produced to the highest standards and is self contained in a standard 19" rack.

I would think if you ordered it NOW, and spread the bread, you could be using it to talk to all the big AM Stations, on Christmas morning.

I am sure it would warm up the old radio room and make everything nice and toastie!

Now thats bitchen!!

That old piece was built by WRL at 3915 West Broadway in Council Bluffs IA (right over the Misery from the big O) when I was a sprout. The building now houses the Salvation Army but Leo Myerson W&#65533;GFQ is alive and kicking and shows up periodically at the QCWA meetings at which I wouldn't be caught dead.

The originals had 11 meters on the VFO as it was still a ham band. One yonock with one lived across the street from the Benson Park RC model park and had his bug on a long cord so he could key up at 27.255 and watch the aircraft go nuts. Probably pulled wings off of flies when he got tired of poisoning dogs.

Don't know about bitchen but that SOB sure as hell was heavy.

Hello Dick: Yes I'll bet heavy is its middle name!! I can feel my back acking now!

The old Johnson 500 watt transmitters, when on E-bay (I have only seen one) went for thousands of dollars. The one that had the 4-400 as a finial also.

I have kicked around the idea of building from scratch a Johnson 500 look a like. Using large custom slide rule dials, and the military spec'ed round meters, with a internal Bird Cavity, and Bird Meter on the face of the Jay Made 500 watt Transmitter. With a bright string of LED's in a horizontal row just above the Bird Meter, indicating Not PEP, but Peak Instantaneously Power, the LED's not having the inertia or hysterias that the meter movement has. And would add the "Light Show" Gee whiz value to the rig. And because PIP is way more than the PEP or the RMS power levels by a hole 3 dB ah! More is better.

A 4-400C class C, Plate modulated by a pair of 4cx250's and a Peter Dahl Modulation transformer. Make ya want to go build one ah?

The older larger lights and switches a must. Large clacking relays another must, so that when the transmitter is keyed, a large relay gives off a loud clank. I would want a LED's indicated the frequency read out, just above the large dial.

The 4-400 would have to be mounted in the top center of the transmitters face, with the RF Proof glass, allowing the finial 4-400C to be seen, this will raise the price a few hundred, ah! Just like the older Collins Broadcast stuff.

Who's Leo Myerson, QCWA, and you wouldn't be caught dead there, why????

Well ok you can cuss the thing out during moving and lugging it up the stares, but after tuning her up, and feeling the warmth of all the tubes, thats when its bitchen!

Its a real shame that the new rigs sound like shit on AM. I was going to buy a new Yaesu Giznostic 75,000 something, but after listening to it on AM, no way. So I ended up buying a used Icom 746, it sounds great on AM. Does both 6 and 2 metres to boot!

Jay in the Great Mojave Desert.

Leo owned WRL. QCWA is Quarter-Century Wireless Assn, and who wants to hang with a bunch of old farts.

I guess being there at the time has some effect but I was happy to see Ancient Modulation done away with. Let me design your audio deck; it will have compression and hard limiting built in so that when you fire up the clunking relays will sound like an explosion in a junkyard and only Orson Welles and a few others will sound more like the voice of God. The Browning beep was an accident but this one will definitely clear the sinuses for miles around.

I've always found it amusing to listen to people pan the shit out of various brands and not realized that most are made by Uniden. Uniden makes 99% of the CB radios. Including Radio Shack. The only difference is the box and the price. Radio Shack is over priced on all its products. That's a good reason to stay away from them.

> True.
>
> > Pictured was that radio,
> > mic plugged in, so he might be using it in that matter
> > correct?
>
> That's the sticking point right? Is it or is it not modified?

Actually no, it has been assumed here when one sells
a 2510, 2950 that it is illegal and they are using it to
transmit illegally. So when I see his radio tuned into
a cb freq., mic plugged in, it must be used in that
fashion.

>
> > Same goes for a cb'er, you would have to be caught,
> > just an accusation alone is not evidence enough.
>
> There are a number of CBers on this group who don't pick any bones about

> well, i.e. they probably lie about everything, thus their credibility goes
> down the drain.

Agreed, proof, lies. So one must try to distinguish between
the two, can you do that here?

>
> All that picture shows is the rig is "receive mode" for a 11m frequency.
> There is no TX light on, and there is one right below the RX light on the
> front panel. I have the exact same rig so I know what it can and can't do.
>

Please Leland, don't even go there. Your friend Aaron
says right away that would be illegal.

> >and "might" transmit there
> > with it. You can try to defend it all you want, but if he
> > has it set up there, chance's are he use's it.
>
> And like I said before is the rig modified or not? Can you prove it one
way
> or another from just what you see?

If I posted a 1981 2510 for sale could you prove
anything about it? It was legal then.

> > Aaron (whoever) and others here had whined and cried

> was disconnected. Yeah, right, I don't believe it and nether does the FCC.
> And since some of those cases made it to count, and the CBer still paid
the
> fine, it seems the judge doesn't believe the excuses either

Wrong, sorry. I have not one radio hooked up, everything
is sitting in the cupboard neatly arranged. You must have
proof that they are being used (not possible). You must
have proof they are being offered for sale (I have not)
So I have committed no crime. To compare amps & radios
to drugs show that you might have some form a of recognition
problem.

> It does. Hams need to be reminded they can't run their Ham gear on 11m.

It seems more Hams than Cb'ers need to be reminded.

>
> > all that mattered was to whine about it. But here is a

> > so I would say that pretty clear evidence.
>
> Clear evidence he's monitoring 11m. Remember the TX light is not on.

The same could be said about Prozac just holding his
amp in the arms, but Aaron and phony boy branded
him a criminal.

A Straw Man Argument is a statement you make if you want to more easily attack an opposing position.ï¿½ You intentionally make a silly caricature of that position, one that no one would believe, and knock down that silly, unrealistic caricature.

"G SEVEN" <superiorwavelength@prodigy.net> wrote in message news:<U%wK7.395$103.65765426@newssvr16.news.prodigy.com>...

You then proclaim that the original version of the argument has been demolished.ï¿½

> That's to say if they ever had a sincere goal in the first
> place.

This is one of the most unethical and cowardly of debating tactics, since you have so little confidence in your own position that you cannot even address the real position of your opponent.ï¿½ At the heart of the Straw Man Argument is deception.

Think again wiseguy. MOST of the radios on the market now (in the USA) are
either made by or are clones of RCI radios OR some Maxon crap.
Midland/Alan/CTE has a BIG chunk of the Euro and Australian markets.

True, Train... however, Uniden does make a couple of the RS models, as well as their own radios. Cobra now makes their own, to our displeasure...

well , well , well what do we have here.......????? mr davemade
running around and selling all his stuff and then he goes on here and
tells me what my longnose is doing and he ain't never seen
it......friend let me explain something to you so that you will
know............when i say what i say i ain't bullshitting.......no
brag just fact......now i will say this......i know all about bird
equipment.......trust me......i do.........and on the dc stuff , i use

a 10k watt slug and have about 5 watts reflect......so tell me those 55's aren't tuned in perfectly , no doubt about it........you be sure and listen to willie........don't mess with texas son.......that is why all you blue bellies hang around up north talking shit........because if you come south.......either ghost will get you, or bb, or cookie.......or me........and that is a fact jack.....

What your missing is that there is already a lot of confusion about 10
meters. The export radio pushers have "educated" the CB population to
think that if their radio doesn't have 10 meters it's not any good.
Then they come into rec.radio.cb and see all kinds of "10 METER MOD"
posts and hams giving technical advice on how to make CB rigs operate
on 10 meters. It's a wonder the entire 10 meter band isn't filled from
top to bottom with CBers yet.

If hams honestly want to discuss 10 meter gear, why don't they do it
in a ham newsgroup? It'd be more considerate and more respectful to
this NG to do that.

fingster <dsfdd@bnv.com> wrote in message
news:<89rlvt4se3d1m99ik06gbb934r5mpc5pob@4ax.com>...

My suggestion is to set your priorities with the antenna first, the coax second, and get whatever radio you can with whatever is left.

1. Antenna - The longer the better. The best is the 9-ft whip, but usually there must be some sort of compromise. Avoid rubber-duckys.

2. Coax - RG-58 is ok for casual use. Buy the longest piece you will ever need plus a couple feet. Wind the excess in a figure 8 (others will tell you to coil it in a circle because it creates a choke. They are right, it does, but it also creates a 'balun' that puts RF on the outside of the coax instead of up the antenna.) DON'T USE FOAM COAX!

3. Most any old CB radio will work for AM (the normal 40 channels). You will pay more for the bells and whistles. SSB cuts each channel in two for 80 channels, has much better range, lower noise, and generally more civilized operators. It is also more expensive.

BTW, I must agree with the other post about buying a new radio, there are a lot of them that have been nearly destroyed by morons trying to avoid the trouble of getting an Amateur license. It's a shame really, because a lot of those were very nice radios. You can usually spot one by a hole in the top or bottom near the faceplate, or by front-panel switches that don't work anymore (NB, ANL, etc.) Another trick to spotting a modified radio is by examining the screw heads -- they are usually stripped or the plating/paint is chipped. Also avoid 'peaked and tweaked' radios, where performance has been sacrificed for a few extra watts. The 'tweaker' never realizes that it takes 4 times the power to double the range, so those few extra watts are basically worthless. And the 'tweaking' can also screw up the modulation, making the radio sound crappy to the guy on the other end. So unless you are prepared to deal with all that, you should probably buy a new radio.

The RF pirates have spread into the 10 and 12m bands, yet you have
refused to debunk those that operate elsewhere. Do you think that
the pirates will avoid the amateur bands while expanding everywhere
else? The FCC isn't there just for the hams, Dick. If you want to
stop it on the ham bands you have to stop it everywhere or not at all.

Untie your panties, train. It's true that RS -did- use Uniden for
most of their stock, and that has changed only recently. RS sure
is making some bad decisions lately (like hiring A-rod for their
commercials -- that probably cost them a stack of cash!)

It's possible to add 11 meters to almost anything if you want to...

Hell, if the case is big enough, you can put 24 meters on the front panel.

Hello Dick: Why of course, design the audio deck. Plenty of 12AX7 tubes?

The clunking relays, and our own adjustable delay of the receiver being turned off, as the transmitter is keyed will be marvellous and wonderful. We will sell thousands of transmitters. We will lable the contraol knob "Browning Eagle Screech/Feedback" and paint the knob gold, with a blue stripe down the center, Oh yeah!

Just a few more things I have always wanted a separate AM & FM broadcast receiver in the radio, for just listening 2. With a large speaker and grill somewhere in the center of the chassie.

Two each cigarette lighters receptacles at the bottom of the chassie also, for whatever.

Hello Scoot: Yep you got that right.

24 or 25 meters, ... RG6 or even RG7, ... 220 or 221 whatever it takes.

Daaas what I am talking about.

That's rich. I say that anyone willing to invest the money and effort to invest in crypto and spread spectrum technology JUST so they can freeband, has their priorities way out of whack.

Someone with the skill to set up such a system, is more than qualified to be a ham, where that sort of experimentation is encouraged. Running that stuff on 11 meters sort of defeats the purpose. Sure you will have your own private "channel", but you won't be compatible with the rest of the crowd, which means no skip talking, and no neaderthal talking on channel 6.

Oh, I'm definitely semi-rational. There's no question about that. As
for the "picking on typos" deal, if one is going to expect their
argument to be taken seriously, one should make every effort to
present that argument in an intelligent and structured manner. Typos
do NOT present the image of intelligence and organized thought.

Regarding listening in to 11 meters... Do it all the time. Hear lots
and lots of DX out there. You know the funny thing? No local signals
on either AM or SSB! Statistically that indicates that while there
may be a large number of DX hunters out there, it would still be a
relatively small percentage of the total number of CB sets installed
in houses, vehicles and belt clips. Of course, I have no hard data to
support this, but then again, I'm sure you don't either.

I endeavor to obey the law at all times, which is not to say that
there have not been occassional infractions, but I don't make it a
habit to disregard those rules and laws by which our society are
governed. I am not a self-appointed policeman, I don't go around
making citizen's arrests, but I DO feel that it would be socially and
morally my duty to inform a person that they are engaged in an illegal
act, thereby allowing THEM to decide whether or not they want to
continue in that act.

>
>That person can then make a intelligent, informed decision on whether or

I support noone who makes threats. Perhaps you were thinking of a
different "Ray." I DO support the reporting of illegal operating -
but don't feel that attemping to work DX in and of itself deserves
such reporting. If such activity does involve illegally modified or
amplified equipment, I'd be more than happy to contact the responsible
FCC field office and complain - as is my legal right.

Yeah, got myself a Robyn SB-520D for $5.00 that way. Cost me $30.00 to
get it back to "legal." Seems someone had decided to modify the radio
to work out of band. Screwed up the PA/CB switch (what the hell, like
I'd have any use for a PA in the house anyway). For a total
investment of $35.00 got myself a decent AM/SSB base - although I have
to admit, I think the receive audio on the old Zachary T. was MUCH
more pleasant sounding.

$150 will get you the best that the Shack has on their shelves (I
think their "top line" model goes for about $129). It'll be a capable
radio, not a piece of garbage (regardless of what others might say).
Problem is that the Shack's $129 radio compares to the other guy's
$109 radio. The upside is easy access to service centers should
something go wrong... Your decision...

Would strongly suggest that you not bootleg on ten meters. It is a
really sore subject these days and could lead you into ugly situations.
Just today, I was on the Interstate and decided to do a little mobile
CW. I called CQ and to my
"astonishment", I got a trucker who said,

"Whoever that MF is with the beep beep stuff, get the
hell off my F****** frequency. Too bad---he was going the opposite
direction on a barrier-divided interstate. No way to see that tag #.
LOL!
Imagine that, a trucker on 28.085!
Jerry

--
  "Odd you say that, Jerry. I managed to copy a trucker there
yesterday, also. It was in the afternoon and he said he was on highway
93.....when I got home I took a quick look at an atlas. Didn't manage
to locate a 93 highway but didn't look all that much either."
--
There is a RT 93 in MA and NH. Twist, don't take this the wrong
way....but, uh, why were you listening up on 28.085?
-Aaron-

"Well, that probably was where the guy was located then, 'cause the skip
was rolling from that area. Why was I up there listening? Actually, I
really wasn't...I was on my way to a higher frequency when I heard the
booming audio of a poaching trucker on 28.085 as I was flipping the
dial. I hung out and listened for awhile. Didn't hear who he was talking
to but he was shooting skip. He was definitely a trucker and he was
definitely on highway 93 (at least he said he was)."

6072. Audio quality on Cobra 142?

Newsgroup: rec.radio.cb
Date: 2001-11-21 15:15:20 UTC
From: vhfradiobuff@aol.comspamsux
Message-ID: <20011121101520.29629.00001021@mb-fv.aol.com>
Source record: 105035

Hello. I bought a Cobra 142 several month ago and I do a lot of SSB work. I have been told that the audio, with 2 different microphones, was a bit "tinny" or too much trebble. One mike (the Astatic 575) has a tone adjustment, the other (D-104) does not. Adjusting the tone on the 575 didn't seem to make much of a difference. Is there a pod somewhere in the 142 for adjusting tone? Also, the previous owner was apparently big into AM operation, as the modulation limiter was cut. I am thinking of just bringing it by the local CB shop and having the guy replace it in the hopes that it will improve the audio quality. I've also noticed that I can't get 100% modulation like I could with the same microphones on my old radio. Could that be related to the mod limiter being cut?

Hi Aaron,

Although I can appreciate the "gist" of what you're saying, the
"service" is not the one that's "demonstrated no self-policing ability
whatsoever and a historical record of moving onto frequencies that
belong to others," certain people within that service have. I don't
like to "de-humanize" any service, they ARE both made up of people and
are a microcosm of society itself. Some are good and some are bad,
period.

If you really want to get "historical" about it, try a comparison of
NALs issued to amateur operators vs. those issued to CBers. Then take
into account that the number of CBers far exceed the number of
licensed amateurs. I love both "hobby" services but I think you'll
find the results interesting. Oh, but the FCC turned it's back on CB?
Sorry, that's no excuse. Remember to base this on "historical" data,
no gut feelings here. Have fun, :-)

Put a mic with more bass on the radio. Turner Super Sidekick or an Astatic 1104-C with the tone control. This should "lower" things a little.

No cup holders? Gots to have cup holders.

Yes, 12AX7s for sure. Those microphonic SOBs should add a real nice touch.

From: voobner@yahoo.com (Aaron H. Voobner)
Yeah, yeah. I don't know what kind of fish you have down there in Fla. but the slime in a live well is an algae coating that helps keep the PH optimal for the fish, hence the warning to preserve it.
Seriously, I may be scheduled to travel down to Tampa Bay soon and perhaps we could have a meeting to discuss the newsgroup.

"I have an open door policy."

How could we best arrange this?

"Well, since you initiated the request, protocol would dictate you supply a contact means. IE: A number where you would be staying in the bay area, etc."

Do you have a phone number?

"Of course."

Would we meet at your (swamp) house? Or would you like to meet in some neutral spot?

"If you are serious about coming on down, contact me when you arrive from wherever you are staying. We can meet here or for coffee somewhere."

Shall I assume you will be armed and arrange for my own security, or can we dispense with that kind of nonsense?

"Hell, Aaron, I ain't about violence. Don't let the gun rack and rebel flag scare you. I go by Cooter Mae's actions....if she don't growl, (very rare, unless a bobcat or coyote is stalking the property) you'll be treated like kinfolk."

Some topics I'd like to discuss:
-Xmas Cease Fire

"I have a workload from the 3rd week of December that will carry me right up to the new year nonstop. Any salutations will have to be sent in advance."

-Establishment of borders between rec.radio.cb and rec.radio.amateur.policy

"That's not my forte, but we can certainly discuss it."

-Hand over SD Jones to authorities

"At the very least I would consider a prisoner exchange, but you must understand..SD is considered somewhat of an exotic rare breed, an experienced veteran of this type thing, therefore if he was to be given up the entire AKC must be disbanded and he would have to be promised complete immunity and returned to his people as an elder. And we would also require a pennance of an ear or finger from each of you, but we would not require a formal surrender. On second thought, let's save this one for next Christmas."

-Cessation of hostilities against Leland Scott

"This would be better directed @ L. Scott himself. After all, my stated goal isn't to "bug" him and I don't refer to him in all my posts and I certainly don't place his nic and addy in my headers because it "may" upset him and I do not go to other ngs where he has never been and trash him. Karma, ya' know. You gets what you gives. I mean funsy is funsy, but anger and hostility leaves a bitter taste all around.

And did you see what you did to George, Aaron? You made a request and he plagiarized your idea, bastardized it and set forth an unrealistic goal of no less than 18 demands. Send him some of that Valerian root tea, will ya'?"

Perhaps you should consider the fact that CBers have no licensing structure to deal with and are not required to
in any way identify themselves or their locations, whereas the amateur regs are very plain in regard to
identification and licensing. Perhaps the amateurs get hit more often because they are a more visible target.
Just look 'em up in the callbook and send a letter. It's a little harder to find "Hard Rocker Number 12"

Different times and places. So it wasn't as hair raising as you might think. It is also a bit easier if you had to make 13 which meant 16 before you could even think about it. There was also a lot less hooferah about it as the privleges were not all that much more than the Advanced. One gained more in pontification value.

In a lot of ways the 5wpm has made my life simpler. Getting on CW used to result in the keyer getting bumped, gee a 1x2 -- code practice time, and what started at a calm 16 or so turned into 25 which was really not as enjoyable. Sweaty palms don't do a lot for me. I am not a natural at it BTW.

We, of course, will never know but I would bet dollars to donuts that it would have been easier on you to learn 16 right out of the box.

Trundle down into the old 40 meter Novice band. Word has it (I have no 7 MHz antenna) that it is where 5wpm hams do code practice so they can do it for real. And, of course, the QuiRPers are at it as well.

The hobby has at least 953 sides; pick a few and enjoy.

put the limiter back in and get a deeper sounding mic, d104's have always been tinny sounding. go get a turner 2, 3, or sidekick. check your impedance on the mic and radio too

"My goodness, Raymond. It's true. You are no stranger to the ways of the
trilogy of trouble if you are going to begin picking on typos now. And
after all the time and work you put in to presenting an image of a
semi-rational hammie among us lowly cbers. You appear to be meshing well
with the few nocodes among us who feel threatened when actually called
upon to discuss an issue and must use diversional tactics such as
picking on spelling, typos, grammar, insults, threats and accusations,
and well, ...you see what they have been reduced to.
  You need to listen up on 11 meter during the day. Almost
everything you hear is DX during the daytime. If you aren't hearing
anything at all, you need new ears. Try sideband."
--
Oh, I'm definitely semi-rational. There's no question about that. As for
the "picking on typos" deal, if one is going to expect their argument to
be taken seriously, one should make every effort to present that
argument in an intelligent and structured manner. Typos do NOT present
the image of intelligence and organized thought.

"And I wholeheartedly concur. I took that same stance and displayed the
retentiveness of anal locale and arrogance such as you are doing now
concerning spelling, when I first arrived here, spell check intact, etc.
I have since learned that if it is the queen's english and grammatical
skills one is seeking, this group is not the correct venue. I have
learned the spelling or grammar matters little here. I have learned
plenty from these guys about all kinds of things, antennas, radio, mods,
power supply voltages, amp classes, what companies to trust, some
trouble shooting, etc., etc., and I can say for certain any
spelling/grammatical errors, or lack of on their part, does not in
anyway whatsoever detract from what they have to say, or prevent them

from being "taken seriously. These are some of the best in the field and instead of taking advantage of some off these top minds, we have people like you that would complain that Einstein was soiling himself during deep thought research sessions and therefore should be discounted. Once you get over your 'but my post is so much more articulate than yours' BS, you will find you learn more and it will make your stay with us so much more pleasant."

Regarding listening in to 11 meters... Do it all the time. Hear lots and lots of DX out there. You know the funny thing? No local signals on either AM or SSB! Statistically that indicates that while there may be a large number of DX hunters out there, it would still be a relatively small percentage of the total number of CB sets installed in houses, vehicles and belt clips. Of course, I have no hard data to support this, but then again, I'm sure you don't either.

"Nope. Just what I hear each and every single day."

AB2HR said:
I endeavor to obey the law at all times, which is not to say that there have not been occassional infractions, but I don't make it a habit to disregard those rules and laws by which our society are governed. I am not a self-appointed policeman, I don't go around making citizen's arrests, but I DO feel that it would be socially and morally my duty to inform a person that they are engaged in an illegal act, thereby allowing THEM to decide whether or not they want to continue in that act.

"That is totally cool, Ray. But in exercising my freedom of speech, I would then feel it perfectly acceptable to inform one that I felt was attempting to impose his standards of morality or social beliefs upon myself, to smooch my gluteus maximus."

That person can then make a intelligent, informed decision on whether or not they want to engage in that activity.

"Or an incredibly intelligent decision that usurps your self appointed role as playing selective enforcer."

I was not playing enforcer. No threats or directives were issued.

"No, you are above the threats Ray, I will give you that, but some that you rush to defend are the ones whomake the threats on a regular basis around here."

I support noone who makes threats. Perhaps you were thinking of a different "Ray." I DO support the reporting of illegal operating - but don't feel that attemping to work DX in and of itself deserves such reporting. If such activity does involve illegally modified or amplified equipment, I'd be more than happy to contact the responsible FCC field office and complain - as is my legal right.

"Do you have a way of ascertaining whether one would be running illegal power or is your suspicion sufficient enough to report?"

  merely pointed out to the person asking the question that working DX on the CB bands was illegal in the US. Would you react the same if I pointed upwards to a grey and dreary sky and said "it's cloudy today?"

"And I have no problem with that. But you attempted to spin it and claim that you feel a compulsion to let someone know when they are breaking the law. I took issue with that statement because you were usng it to justify your previous actions and statements when that statement only applies to cb in your life."

And what "previous actions and statements" are you referring to?

"Claiming you feel it your moral, obligatory duty to inform a person
that they may be violating the law. That does only pertain to cb, right,
Ray? I mean, you wouldn't attempt to try that in person to a speeder,
bank robber, etc., would you, Ray?"

Are you sure you're not thinking of some other "Ray?"

"Pretty sure. Have you ever posted as another?"

who gives a crap about frs...????

> 13. Allow a peace-keeping force from the ARRL into rec.radio.cb to provide
> for the protection of legal CBers against acts of keyclown-sponsored
> aggression.

well it just might come down to that, if you akc's persist....have you
ever heard of stuff getting off the usenet into real life??? think
about it....

> 14. Apologize to proponents of legal CB for acts of aggression the keyclowns
> have committed against them for several years.

no i refuse.....
> 15. Apologize to innocent parties such as Dwight Stuart, Glen Sparks, etc.
> victimized by the keyclown's acts of aggression.

hmmm,........dwight stewart is on the hit list.....but who is glen
sparks????

> 16. Turn TRA1N over to the FCC so that he may face justice for his radio
> crimes and crimes against legal CBers.

how much is the reward?????

> 17. Accept responsibility for illegal operation.

i do ....

> 18. Accept responsibility for the fact that keyclown aggression against the
> anti-keyclowns and others are the direct cause of continuing strife in the
> newsgroup.

no the reason for continuing strife in the newsgroup is because of
people like you pal......the akc's started this shit......now it will
be finished by others.....

> The interests of illegal operators does NOT outweigh the needs of legal
> CBers.

yes it does and i will tell you why...when the big dawgs get off the
porch all the pussy's and mudducks must run and hide or get a chuck
taken out of their asses......no doubt about it.....

hey douchbag...i thought there were only 18 points.....oh i see...that
is as high as you can count right???

> The law-abiding CB operators are adamant that the keyclowns, bootleggers,
> and pirates immediately cease mistreatment of users whose frequencies they
> occupy illegally.

no, no, no........you idiot..... instead of doing this kind of crap
all the time, go get yourself a good book and brush up on your reading
skills or get yourself a good looking woman......well ok , the last
part is a stretch for you pipe and perhaps the whole statement is a
stretch.....you haven't had pussy since pussy had you probably and you
can't read anyways, so what's the point?????

And now you get to a discussion that has gone on here for a while. It is not easy but not all that difficult to set a receiver at 28.085 (actually it takes two to distinguish skip) and use it to trigger a wideshift RTTY signal calling CQ for a minute or so. You do have to listen so that a reply is possible to avoid a violation of the one-way rules but we think Riley would not be too tough on that. OK.

So some bright soul says if you can do that you can take some pictures on I-80 as well, particularly if access can be obtained to the cameras that are already on the Interstate. The logic is a bit wierd but nothing that hasn't already been done on repeaters and I have built repeaters. So how do you keep from running a mile of tape to get a three-second sequence and build both freq and time into the evidence. Cute problem. Wonder if you can do a digital voice in a 1 kHz bandwidth that says 'You are busted' kind of like CHU, totally digital that sounds like AM?

Now someone lites up and says that it would now be possible to get a city ordinance passed and let the grand and glorious Omaha Police Division into the act. As it happens, the City gets zilch out of traffic fines so they tend to content themselves with only busting real hazards to navigation and anyone that even looks like a doper. And confiscation rears its ugly head. Probably not possible with truckers but the old excessive bail trick works every time. Forfeiture of truck and load would, however, bring this to a grinding halt in a helluva hurry.

So we now have a few planning to start a corporation to sell units to cities to scan 27.415 to 28.300 for non-digital signals and do everything short of activating a portable gallows and blowing the judge out of bed. The project, in short, threatens to get totally out of hand. So I have used this line in other contexts.

One sets up a minefield, Aaron, he does not set up a shrine.

Dick NBK

Hey Jay!

How much would that set one back? I remember those fondly from the 60s. Am I wrong, but
AM seems to be making a small comeback. I run a little AM on my IC706--all of 40 watts.
Works well, too. Kind of surprised me. There's a bunch of guys that get on 7290 KHZ in
the mornings, and I join in--especially when it's cold weather. It's interesting the way 40 meters works. In the earlier part of the morning, it favors the Northeast, so you hear a lot of 1 and 2
area calls. Between 10 and 12, it favors the Southeast, so there will be a lot of 4 calls on (my
group). After lunch, it moves to the Midwest, and you hear lots of 9 calls. And so forth. Forty
is a fun band if you know how to use it. LOL!

AAAANK! Not quite. Not to defend Doug's past behavior, but a 706 will receive 11 meters
right out of the box--so will many ham transceivers. Without the "mod", if you key the mike, it
will only beep and read "OFF" indicating that it is not transmitting. Like those that "freeband"
say, there is no evidence of illegal activity simply because a ham transceiver is displaying 27.405
for example. You would have to catch the guy transmitting to make a case. I'll tell you now that
my 706 would transmit on 11 meters because it has been modded to operate on frequencies out-
side the ham bands that I have licenses for (USAF, CAP, SHARES, USCG, and FEMA). But
I DON'T transmit on CB with it. Accuse all you like. When I decide to operate 11, I stick in an
old Radio Shack TRC-something-or-other (I forgot). It ain't a crime to listen, OK?

Yes,

I know my post reveals that I am really steamed over it, and I know I am not the only one. The
hams will be on the front lines in this, I imagine. I have been out on the interstates as well, and have
begun to carry my camera, tape recorder, and note pad. If we want to keep our spectrum, then
we will have to play a part in defending it. What your locals are doing is what all of will have to do
to get the word out that we will not tolerate snakes in our henhouse.

That's correct. I'll post my views whenever I feel like it, the same as
anyone else in this group is free to do.

As far as the bogus posting, porn etc. goes you'll have to take that up with
the responsible party. I don't have any control over that nonsense and never
did. That's why nobody has ever proved I did any of it because I never did.
Twisted, Mopar and Tim are the exception because the last two, Mopar and
Tim, don't have half a brain between them because they eat up Twisted's BS
without question. So when you consider that Twisted is the group's punch
clown with his crazy talk of a "jock strap" collection on his wall and
talking to "saucer men" you have to wonder where he gets his information.

He's a real fruit cake, and anybody dumb enough to believe what he says gets
what they have coming from the rest of the group.

Thanks for your concern. But it seems to me that the problem was started by the FCC itself. When the FCC took the 11 meter band for CB use knowing it would have problems with propagation (skip). The 11 meter band was well liked by HAMs of the day. When there was a band opening it was good for contacts in as well as outside the US. The FCC knew this. But the FCC rulers of the day gave into big companies like Motorola who wanted the FCC to leave the 150 MHz frequency alone so they could sale there over price radios to other companies. The bottom line is the FCC screwed up. They had there eye on and there hands out for the dollars that Motorola was throughing around on the capital hill at the time. If the FCC had setup the 150 MHz band for use as the CB band then people would not have to go out-of-band to be able to use the service as it was setup to do. To provide 20 to 30 miles communication for personnel use. Now, today becuase of skip in order to get 5 maybe 10 miles use you have to go outside the band and even run an (oh my GOD) amp! But I see you have a concern for me and people like me who only wish to be able to use the CB service to talk to each other at only 5 to 10 miles apart. If you could get some people together and maybe set aside half or all of the 2 meter band (140 to 146 MHz) and give 40 or 60 channels of VHF FM use for CB you could stop this problem with having to use out-of-band radios. Alot of people I know are giving up on CB radios and going to Marine VHF FM radios that they (oh my GOD) mount in there cars or trucks! This service is for ship-to-ship or ship-to-shore not for shore-to-shore or mobile-to-mobile. But the Coast Guard like the FCC will not go after anyone who is using these services out-of-band or in non intended ways as long as there is no harm done ie giving a fales May Day on Marine VHF Channel 16 or causing interference to an emergency service. It looks like you don't have your facts straight. That the FCC is the

cause of the problem and people are just trying to the best with want they have to work with. Or you have your head in the sand and can't see what is turly going on around you. A wise man once said; A fool walks with his face held high afraid that people will find out about his ignorance and a wise man walks with his face held down humbled in his knowledge. I hope you are not like a group of people I know who are into radios but would drown if they ever went outside when it was raining. Lets work on solving the problem and getting the 2 meter band setup for CB use and not judging people for doing the best that they can because of the FCC's greed.

Waaal,

Everybody has a "button", and that 10 meter thing really pushes mine. When I go out and call CQ
on a frequency I am licensed for and some ya-hoo tells me to get off "his" frequency when the SOB
has no right to be there to start with, THAT really does it! LOL! What *may* come out of all this-----and I kinda hope so----is that the situation will rectify itself. Sooner or later, the illegal sta-
tions are going to attract attention to themselves by straying into the wrong chicken lot. When the
big rooster sees it, then all hell just may break loose. What I mean is this: take for example the
thread about the CBer up in New York. He has attracted the attention of Rep. Charles Shumer
by virtue of complaints from his constituents. Now that is just one incident, but, you recall, Mr.
Feingold and Mr. Ehlers of Michigan already passed the ineffective "local" enforcement law which
has not and will not work. Now you have 3 Congressmen aware of the problem. As the outlaws
stray more boldly into others' territory, the complaints will increase until there will be enough com-
plaints on file to cause the Congress to perceive it as a problem. It may take awhile for that to happen, but if the "militant" CBers who insist on branching out into new territory don't pull back
their horns, so to speak, then it WILL happen. A number of things might result.

1) the total abolishment of 11 meter CB, citing the availability of cellphones, pagers, and faxes to
meet the needs of the citizens as well as MURS and FRS--the original intent of CB before
such things were known.

2) The establishment of of another "CB" band up in the hi VHF band. The advantages are: lo
noise, elimination of skip and the drying up of amps since they would be of no real use on VHF
as far as "keydowns" and distance are concerned. You can bore 1000 watts into a nearby
mountain to no avail if it blocks the line of sight path to your intended station. This could be
done as the professional users vacate that area in favor of trunked 800-900+ bands. It also

means that long distance interference would be virtually eliminated and more people could be
on the air at the same time with quiet, hi fi audio. Yeah, i know there would be some that would
still try to be channel masters and key others out. But he would just about have to be right be-
tween two stations to do that because of the capture affect of FM.

3) A substantial restoration of funding to FCC (I believe that will happen in the future simply be-
cause of the trend that's happening in CB now towards more power and illegal operations)
where upon enforcement will become aggressive. Again people are becoming more and more
entertainment and personal device-oriented and will not tolerate interference to their electronics.
The complaints like the New York thing can only become louder as more people indulge and
are encouraged to indulge in such activities as amps, freebanding, and doctored up export rigs.

Whereas there were almost NO actions against CB operators in the past and FCC WAS AWOL,
by their own admission, they ARE increasing, yes, slowly. Even if it is not of the doing of those who *may* operate illegally in this group, those truckers are most likely to be the cause of your
undoing. They ARE attracting the attention of the "wrong" people even as we speak. Someone
mentioned recently that they couldn't believe they were holding off on CB and targeting the hams
because it "didn't make sense". To them, if CB were "so bad" and the FCC were interested, then
they would hit 11 meters, too. Well, for those of us who have MET Riley Hollingsworth, for
those of who have talked to him in person, and for those of us who have listened to him outline his
approach in hamfest forums, this method is EXACTLY the way he declared he would proceed. This is why you can so gleefully point out the higher number of hams busted vs CBers at this point.
Riley is a ham, and the Amateur band is of great concern to him, so he started there in order to
save it from those who would ruin it. He promised, after he got most of the Amateur violators
made into believers, THEN he would go after the 10 meter bootleggers, the amps, and those "export" radios. That is why the truck stop bust out west, the trucker bust in NC, and the Pretty
Red Panties man in OK.

You can laugh or ridicule me if you wanna, but I am ever the optimist: I believe something IS going
to be done.

Hams of the day avoided 11 meters like it had a social disease. With the TV video i.f. s at 25.75 operation was suicidal. Europe and Africa did not have 11 so as a DX band it stunk. It mated with no other band for the antenna structure. When 15 was cleared in the early 50's 11 became a ghost town. I vas dere, Sharlie.

When there was a band
> opening it was good for contacts in as well as outside the US. The FCC

The CB thing was pure desperation on the part of the FCC. VHF was done on 50-60 kHz channels at the time and VHF-FM rigs were expensive and filled the trunk. UHF was effectively unusable given the cost. Incidentally there was a 460 MHz CB available then. TV channels were frozen in 1956, business channels were unavailable, and the equipment cost a small fortune.

Over the next few years, entire state's TV channels were moved to UHF, commercial channels were split and have been split again as frequency stability has improved and the idea that FM required a modulation index of at least five was disproved. Made for a lot of nice junque for 2 meters tho.

To provide 20 to 30 miles

The two meter ham band is 144-146 worldwide with 146-148 added in region 2
only so you do have a treaty problem.

Alot of

BIMBO 100 ILLEGAL LINEAR(BILINEAR) CB AMP
Item # 1300467515

BIMBO 100 ILLEGAL LINEAR(BILINEAR) CB AMPMy dad is selling this linear and I remember it well. I used to use it to wipe out the neighbors TVs and radios. I remember them calling and complaining all the time because my dad had this kind of equipment. It is in great working order. I believe it is 100 watt. It can also be used to pirate your own radio station which, though, I would not recommend because it is probably against FCC rules. Good luck. Bidding starts at $100. Payment must be made within 3 days of the end of auction or negative feedback will be left. Paypal or Money Order accepted. Also, he is selling a Vintage Collector Courier 1 receiver which is made by E.C.I. Electronics, Model #A-75. Mic is missing but we are still looking for it. If you are interested watch for the auction or email me and i will send the link.Shipping for the linear will be $11.95. Shipping for the Courier 1 will be $16.95 (paid by winner).

I feel special now! It will be a cold day in hell when the likes of a pile
of shit such as you will have ANY effect on me or what I do. If you want me
"turned in" so bad dickhead, GO DO IT YOURSELF!
You little fucking wuss.........Grow up and account for your own actions and
be man enough to stand behind them instead of hiding behind a keyboard. I'm
out here and I'm not hiding.............Grow some balls and be a man you
loser!

Some topics I'd like to discuss:
<snip>
-Cessation of hostilities against Leland Scott
-Aaron-
--
"Aaron, since you are offering to be diplomatic representative on behalf
of Lelnad, perhaps you may enlighten your client that repeatedly
beginning another new day in the same hostile manner with intent to
malign by posting his daily feelings of inferiority, repeated forges,
and odes to underwear is not the best way to win friends, influence
people, or achieve any objective at all, the sincerity of your offer
notwithstanding. Perhaps you wish better for him than he wants for
himself or even deserves."

so let me get this straight......you have no intention,... as you put
it, to quit doing what you are doing.........is that correct???????

That's correct. I'll post my views whenever I feel like it, the same as
anyone else in this group is free to do.
As far as the bogus posting, porn etc. goes you'll have to take that up
with the responsible party. I don't have any control over that nonsense
and never did. That's why nobody has ever proved I did any of it because
I never did. Twisted, Mopar and Tim are the exception because the last
two, Mopar and Tim, don't have half a brain between them because they
eat up Twisted's BS without question. So when you consider that Twisted
is the group's punch clown with his crazy talk of a "jock strap"
collection on his wall and talking to "saucer men" you have to wonder
where he gets his information.

Hi Gary,

I couldn't agree more, which is why I believe licensing should be returned to CB. (BTW, administer a written test on the 43 required Morse characters and you've just removed the ITU from the issue of removing the 155.3 mi. limit on CB.) "KEC-1553" is definitely more visible (read accountable) than "411." I'd certainly welcome it back. But the point of an entire "service" being held accountable for the actions of individuals within that service just doesn't hold water. I don't buy the "majority" thing either. Take it easy.

You should have been at this Year's Dayton Hamvention.
This is an annual ham radio flea market held at the Hara
Arena in Dayton Ohio. I counted no less than five delaers
in the flea market selling CB amps. One enterprising chap
was selling some homebrew ones as "booster amplifiers"
These were "clearly designed" for broad spectrum coverage
(24-30 mHz) and use with "AM or FM Signal Generators"
for the sole purpose of "Bench Testing for proximity RFI
into a 52 ohm load". I have to give him an C+ for originality.
500 watts continous duty, just $400.00 cash each. He sold all
three of the ones he brought in the first half-hour of the show before
the FCC and ham-Op / RF-cop-wanabees's started walkin
the flea market looking for contraband electronic devices.
(these being CB amps, cable TV decoder boxes and porn tapes..)

Glub bless America, where you can get almost *anything* for cash
no questions asked....

So *that* gives you the right to break the rules, freeband, bootleg,
etc?

>Now, today becuase of skip in order to get 5 maybe 10 miles use
>you have to go outside the band and even run an (oh my GOD) amp!

Too crowded, so you have to "go out of band"? And what happens when
"out of band" becomes too crowded? Move on to new territory? You
outlaw guys are UNBVELIEVEABLE!

>If you could get some people together and maybe set aside half
>or all of the 2 meter band (140 to 146 MHz) and give 40 or 60
>channels of VHF FM use for CB you could
>stop this problem with having to use out-of-band radios

OK. You have FRS and MURS and GMRS - all VHF/UHF short distance
services. NOW what's your excuse?

>Alot of people I know are giving up on CB radios and going to
>Marine VHF FM radios that they (oh my GOD) mount in there cars
>or trucks! This service is for ship-to-ship or ship-to-shore not for

>FCC will not go after anyone who is using these services out-of-band

Sure, just grab any radio you want and start transmitting any where
you want. After all, it's all about YOU and your needs. Try the 123
mHz airband, there are lots of used radios out there. Let me know how
it works out.

Putz.

Mainly it had to do with the economics of the 1950s, 27MHz was top end
as far as conventional radio equip went back then.

The 11
> meter band was well liked by HAMs of the day.

True, to an extent, but then it wasn't harmonically related to the
other ham bands so equipment was sometimes hard to come by.

When there was a band
> opening it was good for contacts in as well as outside the US. The FCC
> knew this.

In 1955, 11 meters was not exclusive to Amateurs under the Radio
Confrence of 1947 worldwide, 10 meters was.

But the FCC rulers of the day gave into big companies like
> Motorola who wanted the FCC to leave the 150 MHz frequency alone so
> they could sale there over price radios to other companies. The bottom
> line is the FCC screwed up.

RCA was the big player then, Motorola was an upstart. Read the History
of Radio and see how FM came to be and how the patent wars between
RCA, GE, Westinhouse, and myriad of others along with Armstrong, who

invented FM and other things radio wise.

They had there eye on and there hands out
> for the dollars that Motorola was throughing around on the capital
> hill at the time.

Radio was and is big business, no arguements here, SEE NEXTEL.

If the FCC had setup the 150 MHz band for use as the
> CB band then people would not have to go out-of-band to be able to use
> the service as it was setup to do.

Equipment was not available at a cost effective price for FM VHF in
the 1950s. There was a 460 MHz CB band which is now GMRS/FRS.

To provide 20 to 30 miles
> communication for personnel use. Now, today becuase of skip in order
> to get 5 maybe 10 miles use you have to go outside the band and even
> run an (oh my GOD) amp!

It isn't the only alternative. SEE NEXTEL.

But I see you have a concern for me and people
> like me who only wish to be able to use the CB service to talk to each
> other at only 5 to 10 miles apart.

No, the CB service should have been placed at 460 MHz in the mid 70s and
27 MHz phased out by some future date with no more "legal" stuff being
imported and sold at the mainline stores (Radio Shack, Sears, K-Mart
etc)
460 MHz could and should have had 120 Channels, repeaters and Generally
have the full potential to be what GMRS should have been.

If you could get some people
> together and maybe set aside half or all of the 2 meter band (140 to
> 146 MHz) and give 40 or 60 channels of VHF FM use for CB you could
> stop this problem with having to use out-of-band radios.

Hard to do, 144 to 146 is worldwide with 146 to 148 being a local issue
but very crowded in the metro areas. The 140 to 144 and 148 to 150.5
is US Govt (Military) and they aint moving. BTW, some local freelance
radio types in the Gulf coast Region (fishing vessels) were using
modified
2 mtr equipment to communicate on and they ran afoul of the Coast Guard
when
they thought 143.550 belong to them. When asked to vacate the freq, the
rply was a classic, "I bought this G**D*MM radio and you can't tell me
S**T, M*****F*CKER!" The boat was RDF'd and towed in after seizure at
sea in gulf. Needless to say, bunches of unlicensed stuff was desposed
after 9-11.

Alot of
> people I know are giving up on CB radios and going to Marine VHF FM
> radios that they (oh my GOD) mount in there cars or trucks!

Very common along the Gulf Coast but after 9-11 local yokels are keeping an eye open for something out of the ordinary.

This
> service is for ship-to-ship or ship-to-shore not for shore-to-shore or
> mobile-to-mobile. But the Coast Guard like the FCC will not go after
> anyone who is using these services out-of-band or in non intended ways
> as long as there is no harm done ie giving a fales May Day on Marine
> VHF Channel 16 or causing interference to an emergency service.

In areas away from the Commercial Marine Industry and Such, (usually well
West of the Miss River and its Naviagable Tributaries) some of the Marine Frqs in VHF are "recycled" for other uses such as public service, commercial, etc., so I would not rely on the "Urban Myth" of no enforcement since many a Kansas farmboy has been cited for improper marine radio usage. Since no license is required by private boats and users, this falsehood has gained widespread currency and has led to several incidents along the gulf coast with improper installations and usage.

It
> looks like you don't have your facts straight. That the FCC is the
> cause of the problem and people are just trying to the best with want
> they have to work with.

To say the FCC is the PROBLEM is like saying the State Troopers cause accidents. The FCC did cause some of the problems when enforcement went away, licensing was eliminated, noise toys and other BS became widespread
on the bands. Pandora's box is hard to close when the genii gets out.

Or you have your head in the sand and can't
> see what is turly going on around you. A wise man once said; A fool
> walks with his face held high afraid that people will find out about
> his ignorance and a wise man walks with his face held down humbled in
> his knowledge. I hope you are not like a group of people I know who
> are into radios but would drown if they ever went outside when it was
> raining. Lets work on solving the problem and getting the 2 meter band
> setup for CB use and not judging people for doing the best that they
> can because of the FCC's greed.

2 Meter Band would not be a likely place for a new communication band since it sets smack dab in the center of the military stuff and
the 2 meter ham band is crowded for the most part. 400 MHZ area is ripe but if the CB band were moved, I bet 27 MHZ would be vacated by a sunset rule which would elimiate the sales of new "approved or type accepted" equipment and be phased in over a 10 yr period to allow the equipment to become obsolete. After the sunset period, any stragglers left would be quite noticable.

You enemy is not the FCC nor the Hams, but the Big Wireless Comms Companies

who would like to see more "business". Nextel with their 2 way Cell-Walkie-Talkie is the wave of the future. In the Gulf Coast, you can talk from Mobile, Alabama to Houston, TX via trunked radio.

Does that include "Anthrax" spores too? The yo-yo got them from sombody for
a price, and now several people are dead because of it. Does that make you
feel good?

Well 1st thing my friend is try a 5000 slug and get some disapointment, then call Dave a tell him how you got 8 pills to do 2500 RMS bird, I'm sure he would like to know that as well. 2nd BB is yesterdays news, Ghost doesn't run DC and you my friend I have never heard of. And at 2500 bird in the 8 pill class you would be a little better known then you are, hey but it's easy to talk, as far as selling my stuff, everything has a price, and I always have a sale going on.

8 pill 600.00
4 pill 300.00
3 pill 225.00
2 pill 200.00 (2-2879)
2 pill 100.00 (2-2290)
comp reg (runs caps) 250.00
digital meters 250.00
remote FS meter 250.00
1-3000 3500.00

>well , well , well what do we have here.......????? mr davemade
>running around and selling all his stuff and then he goes on here and
>tells me what my longnose is doing and he ain't never seen

Eh... read it again ;~)

===
> Amateurs are not allowed to use spectrally dirty equipment.
> As a matter of fact, RF amplifiers used in the amateur service are
> required to meet the same emissions standards as any other piece of
> transmitting equipment.
===

How about "homebrew" equipment... what test equipment does a US amateur
have to own in order to stay legal, and be allowed to build his own
equipment?
And how does this compare to the standards required of a manufacturer.

At what class can a US amateur build his own equipment, and what level of
electronics knowledge is required to obtain that class of licence?
How does this compare with what knowledge a manufacturer will demand of
their engineers?

===
> I see the correlation between IQ and wattage applied MAINLY to CB
> operators, however I will admit that the same phenomenon DOES seem to
> occur in certain circumstances within the amateur radio service.
> Possible spillover effect, but the results of extensive study have not
> yet been released. Suffice it to say that many amateurs appear to be
> immune to this syndrome, but not all.
===

As do many CBers, but not all.
It's 6 of one, and half a dozen of the other.

===
> I was not. I was referring to CB operators. Granted, many CB
> operators are also licensed amateurs, but the distinction here is that
> when they've got the CB mike in their fist, they (as we all do) are
> not amateur operators, we are CB operators...
===

The Authorities do not seem to agree. As an amateur found breaking the CB rules can have his Amateur licence revoked (see recent posts), this suggests that a "Ham" abusing CB is a bad "ham".

As long as someone has an Amateur licence, they are a "Ham", whether they are using an amateur radio at that moment or not.
When on CB frequencies, an amateur is still a licenced "Ham", to say otherwise is an obvious attempt to hide the fact that some amateurs also break rules, and some even intentionally intefere with the CB service.

Like I said... 6 of one, and half a dozen of the other.

> Dave!!!!!!!!!!!!

You seriously worry me...
Justifying the murder of 1000s of people by saying that the terrorists were carrying out "Gods Judgement". This is the same excuse as used by terrorists to carry out such murders.

The difference with Sodom and Gomorrah is that "the Lord rained upon Sodom and upon Gomorrah brimstone and fire from the Lord out of heaven". No sin was committed in order to carry out the Judgement.

With NY, the attack was made by men, who committed at least two sins to carry out the "punishment"...
Thou shalt not steal (Exodus 20 v15).
Thou shalt not kill (Exodus 20 v13).
Rather like the people who stole Jobs camels, and murdered his servants. They were doing Satans work, and he was trying to break Job.

Would God tell man not to kill, and then make them break that rule to carry out a "judgement" on his behalf? Sounds like one of Satans tricks to me, get them to sin by telling them that God wants them to do it.
If God wants someone dead, then he can do the job himself... just like with Ananias and Sapphira. Nobody kills for God, they kill for their own purpose, and the cowards hide behind God.

Reminds me of a problem a few years back, where a Taxi companys base equipment was intefering with the local church audio equipment on sunday mornings. The equipment was the old AM radio, so the audio would break through.

When a driver called in that the customer had not come out, and to the car, the driver was told to "Give her the benefit of your horn". This did not go down too well with the church.

We are talking about Doug's 706MKIIG in this thread, not a 2510 or 2950.

> Agreed, proof, lies. So one must try to distinguish between
> the two, can you do that here?

Lets turn that around, can you or Twisted, Mopar, Tim, etc? If you and them can be so sure about the "truth" so can anyone else.

> > All that picture shows is the rig is "receive mode" for a 11m frequency.
> > There is no TX light on, and there is one right below the RX light on the
> > front panel. I have the exact same rig so I know what it can and can't do.
>
> Please Leland, don't even go there. Your friend Aaron
> says right away that would be illegal.

Yes lets indeed go there. As a current or former Ham as the case maybe you know as well as I do that simply tuning in on a 11m frequency without transmitting is no violation of either Parts 95 or 97. However if the rig was owned by a CBer, without a Ham license, you would have to agree there is a legitimate question to ask such as is it being used on 11m as a modified Ham rig. The reason this question is legitimate to ask is the 706 series of radios are not legal to use for transmitting on 11m, thus there would be very little reason for a non Ham, i.e. CBer, own or to be using one.

> > >and "might" transmit there
> > > with it. You can try to defend it all you want, but if he
> > > has it set up there, chance's are he use's it.

So by the same token Aaron would be justified in his comments that any CBer who owns an "export radio" must be operating illegally, since they are not type accepted for 11m use, and bootlegging on the Ham bands since the rigs will typically operate on 10m and 12m too. Since they own one "chance's are he use's it."

> >
> > And like I said before is the rig modified or not? Can you prove it one
> way
> > or another from just what you see?
>
> If I posted a 1981 2510 for sale could you prove

Without knowing anything about both the seller, and buyer, you would be correct that one can't really assume much of anything. I would however add that I would question the motavation of the seller, and knowing who the likely buyer could be.

I'll make the same suggestion to you that I did with Twisted, that is to ask Phil Kane in the other news group. He worked for the FCC for a time and did enforcement there including busting CBers. I think you will find the answer may not be so clear cut as you would assume. He can give you the details on what the FCC's policy is, and details you will not see in the enforcement logs or court records.

Did Prozac ever mentioned running power or operating on the freeband etc? If so then Prozac got hung by his own words. The picture would have been just icing on the cake.

Take for example Twisted:

So either Twisted is a total furit cake, and lies all the time, OR he in fact operates on the freeband in violation of Part 95.

Now lets look at Tim Nepo:

<snip>"
==========

Here he is also admitting to his operation on the freeband, operating an illegal amplifier and in general being an A-hole on the air by talking over other stations as well, OR is he is lying too?

Those are just two examples. If you want to waste your time you can find simular admissions by the other popular pirate CBers on this group in the archives.

That reminds me of a few of the locals, at the coffee shop in a conversation struggle, and argument over Morse Code, you know CW.

Bill says: "If you aren't using CW you aren't communicating, and phone should not even be offered as a mode of communication in Ham Radio, or CB radio. Everyone should be using CW and CW only!!!"

Dave replies: " But Bill the ITU in 2003 will drop all testing requirements of CW in amateur testing. CW is dying a slow death. Nobody uses CW any more and it should be dropped like old farts like you"

Bill gasps for a some air, and replies: "But Dave when the bombs drop the only thing that will get thru is CW on 40, what do you think about that!"

Dave says: "So who wants to live thru all that, I hope the bomb hits my house first. So I wouldn't have to listen to no more CW or talk to goofs like you"

Bill is getting even madder, and stirred up. "You younger kids (both of these guys are retired, and enjoying there retired years, and probably in their 60 to 70's) don't appreciate the things that made this country, like the use of CW.....

Dave interrupts Bill: CW yes back during W.W.II you old hoot, and then after the war RTTY, computers, satilights, MTV, rock n roll, and a bunch of other things that replace the CW mode you old kook!

Bill says: "Will I hope the bomb does hit your home first you ol nut cake, but I'll be sending out and copying CW on 40 meters, and helping out, just like in the movie "Independents Day" they will need me"

Dave says back: Oh good you help out the US Military with CW, you old fart, remember we only live 2 blocks away, and I am sure you'll be pushing up Daises just like me"

Bill snaps back: No I'll be in my 1963 bomb shelter, still got her stocked with can goods and of course a CW transmitter, and receiver"

Dave replies: Well thats where you belong you ol koot, with contaminated old can goods, and a musty none working rig, with no antenna, and another thing.....

Sometimes Saturday Morning coffee with all the boys is quit
entertaining, and you don't half to argue none, just listen.

That's an interesting quote from a king that held off the armies of
Austria, Russia, Sweden, Saxony, and France all at once, and started
a few wars himself right after he became king.

I didn't suggest you defend everything. But if you want to defend
the ham bands you will need to do so on more than one front. Even
Freddie understood that you can't defeat an enemy by just holding
them at the border.

BTW, it's interesting to note that Fred's daddy kicked him out of
the house because he was acting like a poof.

Anybody that is willing to spend thousands of dollars for illegal
radio equipment for the sole purpose of keying over some other geek
on the other side of the parking lot "has their priorities way out
of whack." Why would crypto and SS be any different?

"(Doing) the best they can with what they have to work with"? That's
the most far-fetched rationalization for bootlegging and pirating I've
ever heard, bar NONE. You take the prize.

Sure the "problem" is the FCC, the Government, Clinton, Bush, the CIA,
liberals, conservatives, radicals, taxes, the French, your mother, the
school system, etc. etc. etc. ----anything but YOU, right? It can't
be that YOU don't want to obey the rules. No, you're not responsible
for what you do. So we got to blame someone else for your behavior. I
know....The devil made ya do it!

> Or you have your head in the sand and can't
> see what is turly going on around you.

Who cares if the FCC was "greedy" in the past? So what? Is that a
justification for breaking their rules? There has probably been
corruption in your local police department at some time in the past.
Does that justify breaking local laws?

> A wise man once said; A fool
> walks with his face held high afraid that people will find out about

Again this is my point. If a problem is caused you will be
asked to move if you push they the Coast Guard or FCC or who ever will
push back. I do not like that my friends have to use out-of band
radios to be able to enjoy there hobbie. We are not skip shooters or
trying to run everyone else off the channel and be the king of the
hill. We would just like to be able to talk to each other at about 10
miles apart. FRS, MURS, and GMRS are all good services but most will
not make the 10 miles needed or the radios are to high a price for
most. Give us a setup that will give us 10 miles and keep the cost of
a mobile radio below $100 and I will sale a thousand in a week.

State Troopers didn't make the laws the FCC did. If accidents
are a problem on a road way it is the law makers who are at falt. The
FCC makes the rules (law) and can make changes to help if they would.
I don't see the FCC as the enemy but as sometimes a miss guided group.
Yes Pandora's box will be hard to close but the FCC is the one who
opened it.

I have no real problem with the FCC or HAMs. Just the ones who
think; I am holler than thow because I am a HAM and that no one else
has the right or privilege to use a radio. HAMs like this are part of
the problem and not part of the solution.

Great... Now I have a question...

What does you calling for me in the Amateur Advanced portion of the band
prove? It doesn't prove you're an extra....

I'll be listening with half an ear for your call... and of course, I'll
be there with pen and paper to log it properly.

I still can't believe that you MORONS are still arguing the same + or-
bullshit. What the hell is it that keeps you from understanding that what
happens in a Usenet group has little to do with the real world and ANYTHING
that happens in real life? I could post radio and amplifier prices all day
long and not even know how or where to get one. What if I sat here all day
telling people how to modify the radios they have but knew NOTHING about
radios? You IDIOTS have no clue what type of people you are dealing with at
the other end of the conversation. Argue the semantics of it all until time
stands still and it all nothing but a bunch of shitheads whining to each
other about how tight you can wring your fingers together thinking you might
be getting some really really bad amplifier guy arrested......or even
worse....fined!
This shit just keeps getting funnier as it goes.......

We are talking about Doug's 706MKIIG in this thread, not a 2510 or 2950.

> Agreed, proof, lies. So one must try to distinguish between
> the two, can you do that here?

Lets turn that around, can you or Twisted, Mopar, Tim, etc? If you and them
can be so sure about the "truth" so can anyone else.

> > All that picture shows is the rig is "receive mode" for a 11m frequency.

the
> > front panel. I have the exact same rig so I know what it can and can't
do.
>

> Please Leland, don't even go there. Your friend Aaron
> says right away that would be illegal.

Yes lets indeed go there. As a current or former Ham as the case maybe you know as well as I do that simply tuning in on a 11m frequency without transmitting is no violation of either Parts 95 or 97. However if the rig was owned by a CBer, without a Ham license, you would have to agree there is a legitimate question to ask such as is it being used on 11m as a modified Ham rig. The reason this question is legitimate to ask is the 706 series of radios are not legal to use for transmitting on 11m, thus there would be very little reason for a non Ham, i.e. CBer, own or to be using one.

> > >and "might" transmit there
> > > with it. You can try to defend it all you want, but if he
> > > has it set up there, chance's are he use's it.

So by the same token Aaron would be justified in his comments that any CBer who owns an "export radio" must be operating illegally, since they are not type accepted for 11m use, and bootlegging on the Ham bands since the rigs will typically operate on 10m and 12m too. Since they own one "chance's are he use's it."

> >
> > And like I said before is the rig modified or not? Can you prove it one
> way
> > or another from just what you see?
>
> If I posted a 1981 2510 for sale could you prove
> anything about it? It was legal then.

Without knowing anything about both the seller, and buyer, you would be correct that one can't really assume much of anything. I would however add that I would question the motavation of the seller, and knowing who the likely buyer could be.

I'll make the same suggestion to you that I did with Twisted, that is to ask Phil Kane in the other news group. He worked for the FCC for a time and did enforcement there including busting CBers. I think you will find the answer may not be so clear cut as you would assume. He can give you the details on what the FCC's policy is, and details you will not see in the enforcement logs or court records.

Did Prozac ever mentioned running power or operating on the freeband etc? If so then Prozac got hung by his own words. The picture would have been just icing on the cake.

Take for example Twisted:

So either Twisted is a total furit cake, and lies all the time, OR he in fact operates on the freeband in violation of Part 95.

Now lets look at Tim Nepo:

Here he is also admitting to his operation on the freeband, operating an illegal amplifier and in general being an A-hole on the air by talking over other stations as well, OR is he is lying too?

Those are just two examples. If you want to waste your time you can find simular admissions by the other popular pirate CBers on this group in the archives.

12AX7s were notorious for being microphonic. In other words, the cat walking across the floor was audible not thru the mike but thru mechanical vibration. If your mike cord broke, open the lid of the rig and yell loudly. Made QLF a real possibility on CW.

Thank your design committee. I drink a lot of coffee at the rig so having a place to put my mug while operating is appreciated. Normally I would ask for a baseplate warmer but with this rig an icemaker may prove to be more useful.

R U kidding? The Icom's are way better, than the normal CB's.

All mode, 100 Watts, Much better: receive sensitivity, selectivity, audio quality, much bigger S-meter and more accurate, some have pretty lights, lighting up the S-meter Whooo Hoo! BPT, notch filters, DSP, adjustable rec band pass tuning, digital frequency readout for the frequency and ETA for your next fart, ect, ect.

The transmitter is cleaner, way more power, significantly more amount of knobs, audio mic control, RF output power control, so's that you don't over drive your 8 pill, switchable antenna SO-239 connectors in the back and a bunch more stuff.

A inside friend that worked for Yaesu, told me that they believe that 30 to 40 percent of there HF Rigs are going to other than ham radio operators.

I am losing confidence in Yaesu and Kenwood, lately. I think the Icom stuff is way better.

And a lot of other places as well. Why the hell not if you can afford the TVI and rectification problems. Glorioski, we do Morse that went out of serious use by the Korean War unless you ran a Greek tanker manned by goatherders wanting to get married, we do AM from about 1916, FM from the 30s, SSB from the late 30s, RTTY from about then when Teletype made it work in a cloud of burning machine oil. A little retro never hurt anybody.

On occasion I drive a shuttle at U Nebroma which has managed to get the classrooms on one side and most of the dorms and parking on the other side of a city park. It is interesting to note the entrants in the Holden Caulfield Look-alike Contest; backward caps date from a novel in 1950. Rap dates from the 20s; some of the best rappers around were the black DJs from about 1935 on until musical integration put them out of biz. And some of the women look like fugitives from 1940.

Being old enough to have seen some of this the first time and several generations closer to the origin is enough to make me feel like an old geezer.

Stop that Jerry!

About the "mudduck station" comment...

Just now, about 5 minutes ago, I had a contact to PI2GD, in the
Netherlands.. He gave me a "58" report, so I guess I'm not such a
mudduck.. Now where are you???

I'm waiting..

>
Hams are unusually jealous of their frequencies and will defend them,
but then it is very easy to obtain a license nowadays. The Amateur
Mindset
comes from 10 decades of guarding their frequencies and know they have

earned the privileges. When I finaly earned my license in the late 80's I was proud because I hated the code torture but endured it to become an Advanced Class for personal satisfaction. The old anti-newcomer ham is becoming a thing of the past. When I first wanted to become a ham, in the late 60s early 70s, I know, i ran into the closed ranks syndrome. I finally overcame the stigma and DONE IT. I hope to change radio for the
better but it won't be easy.

Really, there is
no right to use a radio granted by the government only a privilege and that can be easily taken away. I think Nextal and the Wireless World would like to take over all radio and stick their hands in each pocket.

Mel,
You hit the nail on the head, the Pandora's Box is open and how does the FCC get it closed? Well as you stated, they did cause the mess and that is partly true. The Short Range Comms that CB was supposed to provide has been drowned out by the AMP BOYS and Noise toys which festered during the absence of FCC attention. My advice for you and your friends is to get their ham licenses and then discover the physical characteristics
of different bands and how they work. 222MHz is largely under populated in most areas, and offers the characteristics you seek. As far as the FCC
creating another service or expanding what they have, I don't see it happening. ATT fought the hams in the early years for cutting into their Long distance business and I doubt CB would exist today if Cell phones would have been around in the 50s. FCC just reshaped Amateur Radio
with only 3 license classes to simplify their paperwork and they don't seem
eager tpo expand MURS, GMRS or anything else.

Yes if breaking rules will get them changed or get a service that is usable. As long as breaking the rules does not harm anyone. We don't have big money to get things done so we do what we can.
>
>>Now, today becuase of skip in order to get 5 maybe 10 miles use

>OK. You have FRS and MURS and GMRS - all VHF/UHF short distance
>services. NOW what's your excuse?

I do not like that my friends have to use out-of band radios to be able to enjoy there hobbie. We are not skip shooters or trying to run everyone else off the channel and be the king of the hill. We would just like to be able to talk to each other at about 10 miles apart. FRS, MURS, and GMRS are all good services but most will not make the 10 miles needed or the radios are to high a price for most. Give us a setup that will give us 10 miles and keep the cost of a mobile radio below $100 and I will sale a thousand in a week.

Yes this is the way it will be maybe not on the 123 MHz
airband but someplace else.

Take a pill and lower your blood pressure. Become part of the
solution not part of the problem or do you just like beating a dead
horse?

I don't remember if you were the one or not but some time ago someone doing the code thing was warned by me that he was about to be ostracized by at least two groups, The CB forever bunch and the Lifer Tech contingent. I was right so nanner, nanner, nanner.

There exists a particular form of low life that will do their level damndest to prevent and penalize every achievement in the world whether it is the smart black kid that doesn't want to be an Oreo, the athlete some try to hook on funny white powders, or some guy taking and passing the top-level exam current at the time.

Fart it off, Sideband, and move on.

Help! I can't find these buggers. I live in Los Angeles where everything's electronic, even the women. No luck. Only place on the net that has 'em is an Asian mom and pop store up north and they have a large minimum order. The parts go for $1.75 each but they want $50 for two!

Anyone have two that they won't mind parting with? And please, don't mention ECG or any other "almost as good as" sources. I'll do PayPal to cover the parts + shipping. I want to get this 148 back together soon.

Thanks!!

Matthew

Dick:

I have... He never showed, which further proves my point.. He lied. No
big deal either way. The point is made.

Now, if you and I could meet somewhere on the air for a QSO, I wouldn't
be averse to that. Pick a freq; I'd love to work and log ya.

This would be great, but to try and get a group of
good old boys to get HAM licenses, LOL. I have enough work just
keeping there radios and antennas working right. So they don't come
over moms phone and get shot. :) We use radios as a tool and not as a

hobbie. Most know how to turn them on and key the mic to talk and if it well not they call me. So I need it basic and simple not because the guys are dumb but because they are not going to take the time to learn. Most of them do not even have a computer or if they do don't use it. If someone could come up with a service to fill this need there would be alot of money to be made. But for now I will help when I can and if I can set and tune an antenna to work well to keep it from bleeding into TVs and phones, even though it is an out-of-band radio I will. Then maybe I can talk them into not using the amp. Just doing my part in my way.

Forget the jerky, give that to our little
friend in PA. I would rather have a nice
chunk of that venison instead.

I agree put the limiter back in, it will sound
better and splatter less. After that try the 575
again and see how it sounds.

We are talking about Doug's 706MKIIG in this thread, not a 2510 or 2950.

> Agreed, proof, lies. So one must try to distinguish between
> the two, can you do that here?

Lets turn that around, can you or Twisted, Mopar, Tim, etc? If you and them
can be so sure about the "truth" so can anyone else.

> > All that picture shows is the rig is "receive mode" for a 11m frequency.
> > There is no TX light on, and there is one right below the RX light on
the
> > front panel. I have the exact same rig so I know what it can and can't
do.
>
> Please Leland, don't even go there. Your friend Aaron
> says right away that would be illegal.

Yes lets indeed go there. As a current or former Ham as the case maybe you know as well as I do that simply tuning in on a 11m frequency without transmitting is no violation of either Parts 95 or 97. However if the rig was owned by a CBer, without a Ham license, you would have to agree there is a legitimate question to ask such as is it being used on 11m as a modified Ham rig. The reason this question is legitimate to ask is the 706 series of radios are not legal to use for transmitting on 11m, thus there would be very little reason for a non Ham, i.e. CBer, own or to be using one.

> > >and "might" transmit there
> > > with it. You can try to defend it all you want, but if he
> > > has it set up there, chance's are he use's it.

So by the same token Aaron would be justified in his comments that any CBer who owns an "export radio" must be operating illegally, since they are not type accepted for 11m use, and bootlegging on the Ham bands since the rigs will typically operate on 10m and 12m too. Since they own one "chance's are he use's it."

> >
> > And like I said before is the rig modified or not? Can you prove it one
> way
> > or another from just what you see?
>
> If I posted a 1981 2510 for sale could you prove
> anything about it? It was legal then.

Without knowing anything about both the seller, and buyer, you would be correct that one can't really assume much of anything. I would however add that I would question the motavation of the seller, and knowing who the likely buyer could be.

> problem.

I'll make the same suggestion to you that I did with Twisted, that is to ask Phil Kane in the other news group. He worked for the FCC for a time and did enforcement there including busting CBers. I think you will find the answer may not be so clear cut as you would assume. He can give you the details on what the FCC's policy is, and details you will not see in the enforcement logs or court records.

> him a criminal.

Did Prozac ever mentioned running power or operating on the freeband etc? If so then Prozac got hung by his own words. The picture would have been just icing on the cake.

Take for example Twisted:

So either Twisted is a total furit cake, and lies all the time, OR he in fact operates on the freeband in violation of Part 95.

Now lets look at Tim Nepo:

Here he is also admitting to his operation on the freeband, operating an illegal amplifier and in general being an A-hole on the air by talking over other stations as well, OR is he is lying too?

Those are just two examples. If you want to waste your time you can find simular admissions by the other popular pirate CBers on this group in the archives.

Source record: 105165

Hello Dick: Ok good deal I learned something here, "microphonic".

Use to use a 12AX7, and 2 each 50C5 tubes in a Graymark model 505 AM Broadcast Band, kit in high school. It only transmitted a few doors down but we copied the circuit with Raytheon 807 tubes and got out a bunch more. But the Collins ART/13, and broadcast band oscillator, with the 811's plate modulating a 813 on a 300 foot wire transmitted all over the San Fernando Valley, Big time! Ah buts another story.....

I use to have a old Hallcrafters SX-25 (Super Defiant) that you could ping the cabinet, and hear it in the audio. Ten-4. Came off the old Mans fishing boat, and repaired it, and spent hours listening to everything, with a 300 foot long wire antenna.

Hummmm I just pushed thru a cup holder now you want a baseplate warmer, and a ice maker. Ok what the hey, but I want a old time bottle opener on the side for hot days, when drinking Old Dads Root Beer. Use to drink it with Gin or Vodka, but not anymore. Well you know once and while, especially when Easter Island breaks for you and you have a nice 20 minute long QSO, and you get to help em out with here antennas and such.

That must be the 'country' where RF amps are legal.

Hello Jerry: Good question, I don't know what the price of the "Globe King 500D" is, I left out the contact address. Here it is:

2165 N.W. Loop 286 Paris Tx 75460
903-785-2077

or

vradioofnetex@1starnet.com

I heard on the 147.435 Zoo repeater in Los Angles, that they where in the ball park of $3500.oo dollars, or so. But its worth the effort to send e-mail to the boys here to find out what all the poop is. The Four Three Five "ZOO" repeater is ok for entertaimnent, but not a good place to get reliable info.

I have a bunch of crystals for my Johnson Viking Ranger, and I believe that 7290 is one of them, got a hole bunch of em, in a bitchen custom made wooden box about 3 foot long.

Hello Dick: Yes that would be a night mare alright.

I haven't seen to much of that happening, where the fine radio is butchered into no workie, with the "Weller 350 heater up boys U-betcha". I have a older one that I think is 250 watts with the first trigger switch contact, and 350 watts from the second trigger switch contact. And I just priced the stinking tips at $5.88 for a pair of them, TILT!

I prefer the smaller 100 / 150 watt Weller soldering gun, its seem to get hot faster and is of course its lighter.

By using the smaller tips in the larger Weller Soldering Gun, works great, but the tips just don't last.

I have bought surplus a 200 and 300 watt irons, for that copper water pipe that still has water in it. The Weller 175 watt iron gets to hot, so I have a modified it to have a diode switched in line reducing the duty cycle by 50% percent. And then the high power modification, the AC is run thru a diode bridge, and high voltage (250 VDC) electrolytic capacitors, to up the average voltage to 170 Volts DC, that doubles the duty cycle of the irons element.

But the all time great is my Bell Labs 100 watt, with a modified tip that allows the tip to be placed into the PL-259 connector valley, just adding a tid bit of solder to help the heat flow, each solder hole is filled, sealing the connector somewhat. I use the silver plated PL-259 connectors, and after a few years of practice the PL-259 looks factory machine soldered. Yeah I tell em the soldering machine cost a lot of money.

The most difficult things to solder was the old Flat Pack IC's, normal mortals could raise a trace in a NY Heartbeat. I heated up all the componets and circuit board in a low temp oven, so that everthing was in the area of 150 degrees F, that made the solder flow very nicly. In fack the coffee cup warmers worked great!!! Where did I see the spec before?

(Happy Thanksgiving Everybody)

Guy calls his buddy the horse rancher and says he's sending a friend over to look at a horse.

"How will I recognize him?"

"That's easy, he's a midget with a speech impediment"

So, the midget shows up, and the guy asks him if he's looking for a male or female horse.

"A female horth."

So he shows him a prized filly.

"Nith lookin horth. Can I thee her eyeth"?

So the guy picks up the midget and he gives the horse's eyes the once over.

"Nith eyeth, can I thee her earzth"?

So he picks the little fella up again, and shows him the horse's ears.

"Nith earzth. can I see her mouf"?

The rancher is gettin pretty pissed off by this point, but he picks him up again and shows him the horse's mouth.

"Nice mouf, can I see her twat"?

Totally pissed at this point, the rancher grabs him under his arm and jams the midget's head as far as he can up the horse's twat, pulls him out and slams him on the ground.

The midget gets up, sputtering and coughing. "Perhapth I should rephrathe that. Can I thee her wun awound a widdle bit"?

And if it is only a few kcs off (somehow with xtals, kcs beats kHz) you can lower it by using a little pencil lead on the crystal. To raise it, find a piece of plate glass, some Babo, and rub in a circular motion. Clean with alcohol.

My mother is still trying to figure out where she lost that mirror.

The problem the big Wellers had was that the tip was actually too small to transfer that amount of heat. I have become enamoured of the butane Weller and their solder stations for things like the ICs, sex on a stick.

While I know you never deal with RG-58, some of us have to. I have found that you are better off to file off the nickel plating on the reducer, solder the braid to the reducer, put the verstunken thing together and solder the reducer to the holes to prevent the reducer ever vibrating loose, then do the center lead. A bigger tip on the iron is a necessity as is some patience.

If you turn out neat 259s on a regular basis, you indeed is da man.

Can you put your question in the message body?

Just what is a "power-up kit"? If it mounts inside or on
the radio, it's bad news.

You are always better off with an external "power supply".
The parts in the radio are not meant to handle more then the
rated output. Trying to get more out of a radio just stresses
the parts, creates more heat and can cause squeal and other
instability problems.

Don't cut limiters to make the radio louder. All that does
is cause splatter. Don't tune coils unless you know what you
are doing. Adjusting the wrong coils will show more on a watt
meter, but most just cause harmonics. A watt meter measures
ALL power, wanted and unwanted. Search for an NPC/RC mod if
you feel the need to butcher.

I can talk farther with a 2 pill amp and a properly tuned radio,
then you will with a 4 or 6 pill with a butchered radio.

BTW, a 2950 or a Grant/Cobra 148 is a lot more frequency stable
then a Galaxy. Even a PC-122/TRC-465 is more stable then Galaxy.

Hello Train: I figured someone was going say something about the Weller soldering irons.

My Weller soldering irons I have been repaired and repaired, only to throw them out in a rage of anger, there are setting next to the 5 player CD player in the front yard that has two bullet holes in it.

One guy sells rebuilt Weller soldering irons at the TRW swat meet, I told him of the junk he was selling and just told me tough! What a guy.

I ordered a neat soldering iron with a few different tips, and wire brush cleaning giznostic, it has a dial-O-watt adjustment I think, I haven't even opened up the box yet, since all I solder is PL-259 connectors.

Hello Dick: The Weller butane I'll look at it.

Yes filling off the nickle plating is a neat thing to do, thanks for the tip. I drill a hole thru the PL-259 (forget which size drill bit right now) shield solder holes, this removes the nickle plating, leaving a nice clean and shinner brass surface thats just right for soldering. The silver plated ones don't need to be drilled.

I use to scratch the nicle plated PL-259 connectors with a Exacto Knife blade, inside and out to allow the soldering at a lower temp.

I solder a lot of RG142B, (double shielded RG58 type coax) I'll try soldering it to the adapter. But the silver plated wire, solders pretty good to the silver plated PL-259 connectors.

That Uniden Grant XL for $85.00 is a pretty darn good buy. There was a fellow on the NG looking for a good starter rig. This could be his starting...and finishing purchase (...for 11-meters anyway.) wrapped up in one fell swoop for a nice price.

...SNIP FOR BREVITY
> This would be great, but to try and get a group of
> good old boys to get HAM licenses, LOL.

I can empathize with you on that one, Mel.

I have enough work just
> keeping there radios and antennas working right. So they don't come
> over moms phone and get shot. :) We use radios as a tool and not as a
> hobbie.

Mel,
One of the reasons for the Amateur Radio Test is to stress the proper
care and use of trancievers and such, however if you are using your
radios for work typw stuff, I would suggest GMRS as the prefect
alternative
with upto 50 watts allowed, you are able to put up repeaters and NO TEST
but it does require a license. I suggest you look into it as it
describes what you want to a tee. Handi-Talkies start at $150 and base
and mobile type units cost a little more with different features.

Most know how to turn them on and key the mic to talk and if
> it well not they call me. So I need it basic and simple not because
> the guys are dumb but because they are not going to take the time to
> learn.

See GMRS.

Most of them do not even have a computer or if they do don't
> use it. If someone could come up with a service to fill this need
> there would be alot of money to be made.

GMRS is the service you describe to a tee.

But for now I will help when
> I can and if I can set and tune an antenna to work well to keep it
> from bleeding into TVs and phones, even though it is an out-of-band
> radio I will.

The problem with that theory is that you have to hope you don't get
into the neighbor's stuff and he or she calls her congressman and every
3 letter federal agency they know. Neighbors can and do squeal.

Then maybe I can talk them into not using the amp.

My experience with amps at the home 20 has not been good. Part 15
devices hate them and then the neighbors complain. Once you get
the neighbors to complaining, if not cured pronto, it starts to

snowball. Case in point: Here in Louisiana we had a group of ops
who decided to put in power toys and it promptly cut out the Cable
TV Service and got in the phones. Well a couple of the neighbors
complained to the ops to no avail. The next step was to go the Local
Justice of the Peace and file an affidavit of complaint for distrubing
the Peace. The Local District Attorney had to investigate the complaint
and the Sheriff's office got involved. Well one of the ops told the
sheriff's detective that he was a ham and he was "exempt" from the
rules. Well that did cause the Local Lawmen to back up but one
detective contacted a local ham (Ham Club President) to see what
the scoop was on Federal Operation. Well
after a quick search of the records showed no such license, the
detective went back to op and arrested him for making a false
statement during an ivestigation and the FCC was called by the
local Sheriff's office. Well to make a long story short,
the ops gave up on that one after the equipment was confiscated
and warnings issued.

Learn something every damn day. Never dawned on me to deplate the solder holes. Yeah, the silver plate is the way to go but you know how fearless leaders are.

Whatever you do with the double-shield that works keep right on doing.

The butane ones are of course portable which helps a lot when putting a 259 on an already-installed antenna system in a bus. And they do get and stay hot so the smell of burning rosin fills the air.

Motorola uses the mini-UHF connectors that have to be crimped. It isn't too bad on the shields but the crimp on the center conductor comes uncrimped with all kinds of stupeeed effects. Mechanically, they tend to bust the center wire anyway when the ladies do everything but hang their laundry on the coax. Looks like a glorified F-connector from the local cable company. We have some old Johnsons that will be running when they bury me; course they are operating under about 2cm of crud on the floor to deaden the vibration :-)

Thank you for the reply. I suppose I should just ask the tech to do an alignment on the radio along with replacing the mod limiter and perhaps the radio will be better in the long run? What's your opinion on the Silver Eagle - I know it's very similar to the D-104, maybe even the same inside, but I am not sure...

What would you expect a tech to charge for something like this? The place I am taking it to has been in business a long time, and although his prices for new equipment is a bit higher than you can get on the internet, he does a good job and is honest.

andy, seems to me you just like the tall shiny look of a d104. if you insist on having the gawdy looking thing on your desk you can always replace the guts with a different element and give it a totally new sound. heil sells two that are very popular with hams but one of those makes you sound tinny on purpose so i take it thats not what you want. the other has a very nice mellow sound to it.

when the half-wave is all of about 7 inches things like material diameters
and such become critical so the formulae are approximate at best. I would
try to reverse engineer some of these designs, get it into the ballpark and
put it up. For a scanner it should not be all that critical. Just because
of the frequency you get bandwidth out the waz.

Paper clips, popsicle sticks and nylon ties are the materials I'll
be working with. Cheap, plentiful and good for experimenting with.

> of a difference.

I'm going to assume that your issue takes place on SSB and sounds ok on AM.

I've read the remaining posts and no one has mentioned this. I would hazard a guess that the carrier generator circuit is off frequency. If so, this would put your signal in the wrong place in the crystal filter. The end result is either a tinny or a bassy, muffled sound. This will also affect your receiver on SSB in the same manner.

The radio is old enough that the crystal filter has changed response and just as a matter of course the carrier generator should be adjusted to compensate for this. In aligning this circuit you might ask the tech to somewhat ignore the radio's published settings in lieu of a more customized alignment which requires he/she plots the filters' passband. This takes only minutes more but results in a much better sound on tx and rcv. There's really no reason why this radio can't tx the same audio quality as a big brother ham radio...provided the filter and audio circuits are functionally ok.

There could also be something wrong or modified in the mic amp circuits too. I've seen it where a "tech" in his/her effort to squeeze out that last bit of AM audio has mistakely modified the speech circuits pertaining to the SSB section. The radio is also old enough to suspect that certain caps have changed value which could result in a poor tx sound.

You'll just have to find a shop that has the equipment and know how to check and/or adjust these areas I've mentioned. The procedures for this alignment should be well known and just a matter of course for someone offering radio alignments.

About microphones..I prefer the 575 myself. The D104 can also be a good mic on SSB if you customize it slightly. If you really want to use the D104, I would suggest that you find the 10DA head for it. In lieu of the 10DA head, you can try placing a small value cap across the head to lower the high freq. response or perhaps a series resistor at the input of the D104's mic amp to "unload" the crystal element. There's several ways to mod the D104 to

get the audio response desired.

The guy that designed the commercial beams did it that way, cut and shaved
when he went to the commercial material, and prayed for rain. And he had
shitpots of test equipment behind him. We are not so blessed.

Hello Dick: Motorola tried to use that mine UHF looking PL-259, shit connector for some military applications, the engineering group rejected the contract due to the low reliable mine UHF connectors. Stating that all RF connectors, will have the center conductor soldered, or crimped and soldered.

Motorola responded by having a inspection hole put in the center pin, that would allow the center pin to be soldered. But still it was rejected, and N or TNC connectors where used in stead. Even the SMA, TNC, N, BNC, and a few others where trying to use a crimp only of the center pin, that was rejected.

I know some manufactures have special tooling made that took the center pin, into a tool, and the center pin was drilled thru a drill bushing or guide, allowing a inspection or solder hole.

If you look at low loss (expess-Oh) microwave coaxes, the center pin is soldered. Bought a few new type Gor-Tex microwave cables from the local scrape yard, and after a visit to Mr. band saw, I could see what made it tick. Guess what soldered center pins. The coax looked as if a fork lift had run it over, it places it was only a paper thin, that made someone mad I'll bet!

The double braided coaxes, can be cut in such a way that allows the shields, one at a time, to be turned the other way along the coax, and then soldered. But some coaxes its more difficult to do this with, and unweaving the shield with the tip of a Exacto knife blade works wonders.

A box of Exacto blades and some Acid brushes allows to have different width blades. The back of the Exacto blades are inserted in the open end of the Acid brush, and the opening of the acid brush is crimped with pliers, and soldered if one wants to. The the Exacto knife blade can be broke off with pliers and safety glass's, so that you have a fine selection of different width Exacto knife blades, and a fraction of the original cost.

Safety first: DO NOT add ball bearings (for added weight) inside the acid brush before installing the Exacto knife blade so that it will fly like a missile, from a pipe or tubing from compressed air.

At Telestar C & E we use to do that, and the acid brush would stick to the old W.W.II wooden ceiling. Except one day it didn't stick and came hurling back down to the work area, never seen so many old farts hit the floor for cover in a NY second. Yes safety first.....

Without a doubt, RS is directionless. I still own some stock and its going to be sold soon. The quality is low and the prices are high. That RCA junk that they sell now is crap. bought two items in the past year and a half, and both had to be repaired. The DVD player broke for a second time so I junked it. Cost more to repair. Without parts there will just be no reason to go there anymore. I suspect RS will be gone from the scene in about five years. Anybody want to make a bet on that?

I have soldered the center leads in miniUHF connectors to good short term
effect but the same vibrations that caused the crimp to bust will ultimately
break the center lead. Not a lot different from soldering the Motorola
connector on a car radio except that you get to tin it first.
It is simply a piece of shit.

Duct tape and Xacto knives. Couldn't be a home handyman without em.

I need some ballpark figures so I can aim a small beam out my
window to the public safety tower. I have a clear view to one,
and an obstructed view to the closer one (of eight). There are some
spots that sound great, and others that cancel so bad a beam would help.
There is a cancellation line that follows a main road. I am off to
the side of it. Flutter city. Ask the members of the NG that heard
my scanner the night I had it streaming. Flutter city. My buddy
has some property in a clear view of a third tower. Sounds great there.

My Trunktracker is triple convertion. My Pro-34 is only double.
The TT does real good at 400 and 800. The 34 does real good
at VHF lo and hi. Between the two and my DX-440, I cover alot.

For the Shack haters:

Did RS make these items? No. TT is a Uniden 235. Pro-34 was made
by GRE. DX-440 is a Sangean ATS803.

Other RS items:
TRC-451 - Cobra(Uniden) 146
TRC-465 - Uniden PC-122
The list goes on...

Hello All: Whelp I am sure I got a bunch to be thank full for, and being blessed with things that I don't deserve.

I like seeing the hole family get together, and all, but.....

Soon as that turkey is done, and the oven cools off a bit, I am pulling it out so's that I can gets to that 220 plug fer the big linear, and start shootin skip all over the place.

Inlaws and outlaws due in a few hours, skip shootin a hour after dinner.

We gots Turkey and Ham, biskets, fruit salad, and regular lettice salad, got cran berrys, and cran berry juice $3.69 at the store, Gravy, both kinds of wine, sodey pop fer the kids, corn out of the can with butter and spices. Grandma is bringing up Punkin Pie and home made ice cream, with nuts, cherrys, and whip cream. But we can't no more just squirt the whip cream into our mouths, while in hailing, inless Grandma ain't lookin.

Got Thanks given music from the radio country western, some of that stuff makes ya want to drink and drive fast, (in the old days at least) that is some fine music.

Got the neighbour kids running around, as they get older they get louder.

I got some Rusty Nails all made up in a large flask, use to belong to my great Grandpa, and its on ice in a bucket right next to the old couch on the front porch. But the women folk don't know nothing about it.

So I hope all you rec.radio.cb skip shottin, maul droppers, competition nut cases, large base antenna arrays guys, mobile bob types, hammer down types, radio enthusiast, alternator extroadenair with 13 added belts, VFO operated dudes, Big Straps, normal people, If N equals the operating frequency, then N divide by X will move the operating frequency to N/X x something guys, all the newbies, old farts, and others, have a real great Thanks givin dinner and family get together.

Jay in the Mojave

(Martin) mdwade@mobiletelZ.com wrote:
>Well one of the ops told the
>sheriff's detective that he was a ham

I recall someone at a party once mentioning they "talked to people all over the world on ham radio". Naturally I jumped into the conversation, told them I knew a lot of hams, and asked their callsign. (I didn't mean anything by it, I was just curious what district their callsign was in) Well, this person hemmed and hawed a bit, then took me aside and admitted that they didn't have a callsign.

Which brings up a good question. I wonder how many CBers have ever fibbed and told friends, relatives, casual acquaintances, etc., that they were "hams" or maybe called their gear "ham radio" to lead people to assume they were licensed?

Come on now guys, be honest (a new concept for some). Folks who at any time HAD ham licenses and let them expire or got them revoked (such as TRA1N, MR.K, and LANDSHARK) are disqualified from this survey.

My personal preference is still a Cobra 2000 GTL for
appearance and operation. They can be picked up on
ebay for $250-300 average unit and $300-400 in pristine
condition. I am sure you will get a lot of other opinions,
but this is just my two cents worth.....
Also easily modded for 26.815 to 28.045 freq expansion,
of course though as I am sure "Aaron Voobner" will point
out, this would be of course illegal to do and should not be
done if that sort of thing bothers you.

In seeing the talk about the "mod limiters" I wanted to respond regarding
the ALC circuits.

It's imperative that you reinstall or re-enable the ALC circuit in the SSB
section as well as making sure the bias currents are set reasonably close to
factory.

If these are disabled you will have a pretty distorted output and cause
splatter.

I don't know why, but I see where it's common practice for someone to adjust
the bias controls to max in their effort to get that last 0.5 watt out on
AM. All this does is get the final and driver hot during ssb operation.

Also, if you intend to run a low drive amp on ssb, your alc circuit is your
best friend in putting out a clean, non-splattering signal.

Cost, the cost is too much. Plus we need to talk with other
groups so it has to be a service for all. What we do is not work it is
a hobby. I looked into radios for small companies but the cost was
alot more than what was being spent now. What we do is dog hunt deer
and keeping up with the dogs and each other so we don't shoot each
other has become a need. Alot of money is used for basic gear and then
a radio. Believe it or not one good dog cost more then 2 or 3 radios.
So money is tight and the radio has to cost about $100 for a mobile

not a handheld. If there was a service that would fit the bill I would
push it to the guys as hard as I could and hope it would grow to other
clubs and groups. I will look into GMRS again but I don't think it
will be able to sale it to the clubs or group. Alot of hunters have
gone to the marine vhf radio even though they know it is not right but
still have a cb in there truck so they can talk to other groups. They
are willing to take the risk to save there invesments their dogs and
to be safe so they don't get shot or shoot a follow hunter. Like you
said it is a mess and how to stop it Idon't know.

>and warnings issued.
Again my point, we know we have no lawful growns to stand on.
But the people in the Sheriff's department are deer hunters too and
have the same radios in their trucks as any other deer hunter of this
area. Including marine vhf radios.

>
>
> Train

I had several of these amps and the latest ones I had used 2879's. I would usually see about 800-900 watts PEP using the internal 2879 driver. I liked this amp because I found I could use it on almost all the bands with a useable input swr.

I did overlay the hi current traces with a wire and provided a sheet copper bridge between the emitters for equalization. I liked the large surface area heat sink. For some of them I went thru the trouble of having a friend mill a thin copper heat spreader and placed it between the xsisitors and the aluminum heat sink. Along with this I built an active bias circuit and alc output.

I wasn't then and am not now looking for max power from the fewest parts. I just want something that will give me the aforementioned output reliably. I was thinking a good used 600+ would be relatively inexpensive nowadays and cheap enough to warrant doing the xtra work.

If there's presently something out there similar to what I've described then I'm all ears.
Thanks. BobC

GMRS is easy to get licensed for and the cost of radios is comparable
to handheld marine vhfs.

What we do is not work it is
> a hobby. I looked into radios for small companies but the cost was
> alot more than what was being spent now.

Agreed, business band stuff can get costly.

What we do is dog hunt deer
> and keeping up with the dogs and each other so we don't shoot each

GMRS is quite popular with hunters down here since the cost on the
radios
have really come down. Even Wal-Mart sells GMRS in some areas. License
costs about 75.00 for 5 years and you can have repeaters etc.

Alot of hunters have
> gone to the marine vhf radio even though they know it is not right

Marine VHF radios usually run 1 watt with limited range. MURS can
do that with no problem (costs are about the same).

but
> still have a cb in there truck so they can talk to other groups. They
> are willing to take the risk to save there invesments their dogs and

Well they have to answer for themselves. I know Law Enforcement in my
area is sensitive to rules infractions, on and off duty, since improper
radios are specifically mentioned in our local handbook about equipment
permitted in vehicles. FCC busted a Louisiana State Trooper sometime
back for a modified RCI in the car. OUCH.

Hmm.....

an old Lettine 240 running an 807 in the final driven by a DM35
dynamotor--all on a board in the
trunk and a huge thumb-sized cable(s) running from a Ford starter relay and
the battery. Leave the
damned thing on (filaments), expect to have a dead battery in about 30
minutes (1967). Ah, memories. All of 50 watts AM into a Master Mobile HF
antenna.

Scott, I don't even know if they make beams for that frequency. Often, one uses colinear vertical arrays. For instance, I have an antenna on my 440 HT that has gain - it is a vertical. It is, however, over 3 feet in length. Beams are made for 440 MHz, but above that, expect helix antennas, colinear arrays, and parabolic dishes. I'm guessing, but I've seen some cell phone and trunking antennas with a little coil or whatever in the middle and they are quite long to be a 1/4 wave. My guess is that they are some form of colinear array. I also guess that Sir Richard or Doc could shed some light on this.

Yup, Mil comms are USB not LSB, AWACS job is not HF DF and I don't believe it can even do that function. But they do have freqs in that range.

I don't think Jose had 853 megs in mind but that is the old Channel 82 so
something like a vertical bowtie about 2-3 inches from a chicken wire
reflector would cut you down to one repeater. Don't laugh, that was the
standard UHF TV antenna.

===

It must of been a loud noise, if it was heard in the US. When it comes to moaning, the UK truckers rank about third place... behind women and the "AKCs" on this newsgroup.

To be fair, it wasn't just the truckers who were complaining, just that they were the ones with the tackle to block roads off. With 75% of the price of a gallon being tax, our government should expect some noise.

Brainbuster.

===

I run more than 40 channels. Sometimes I transmit less than 10 KHz away from the 10 Meter ham band on my CB radio.

And there's nothing anyone can do about it.

Brainbuster.

I'm old enough to remember bowties and rabbit ears. I also know
how to use a rotary phone. I remember Dr. Demento and the CBS
Radio Theater. I don't remember JFK. (11-22-63)

Got a few years on you. I was in college in 1963 so I know where I was when
JFK was shot.

Our first phone number was HArney 3087 and you dialed the fire laddies with
37.

Age is not nice.

Born Klutz

MURS looks good but needs alittle more power. Yes handheld
marine radios do 1 watt on low and 5 on high. The mobiles do 5 watts
on low and 25 watts on high. Most people I have talked with that use
marine radios say they do not use the 25 watts setting on their
mobiles, it is simply not needed. If MURS would go to 5 watts for
mobiles and handhelds with a 1 watt setting on handhelds to help on
battery power and offer a 5 channel mobile and handheld for around
$150 each and allow mobile and base antennas with as much gain as a
single dipole that would work! This would make the out-of-band radios
history! As far as we (the deer hunters) would be conerned. Do you
think the FCC would do this? It would work and be a good sevice.

Cross-posted to: rec.radio.shortwave,rec.radio.amateur.policy,rec.radio.cb

According to the Economist for Nov 10-16 two profs have been running a three-year study of E-Bay auctions (via a bot) with the following results:

1. Items sold on a weekend sell for about 2% more.

2. Pictures were worth 5.7% in 1999. This year, it is11.3%

3. Having a decent rep is worth 6.8% and growing as experience is gained. Hey, guys win Nobel Prizes for discovering that you can get better prices from people who trust you and don't build in a margin for getting the green weenie.

4. They are testing software to detect shill bids. You probably will never hear about it on E-Bay but what better place to sell it when the time comes, with a picture on a weekend of course. Should be fun.

Scott's problem is that he is in the cancellation zone between two repeaters. He needs F/B more than he needs gain.

You are correct in that most of the omnidirectional stuff is 3/4 over 1/4 colinear (Aaron, this means they are in the same line, back to your kennel) but yours sounds more like stacked 3/4 which would work admirably. A 1/4 delay is required so that is what the coil or whatever is for.
I had an AS 3/4 over 1/4 that was gangbusterly but everyone thought it was a CB and followed me down the hiway expecting me to alert them to smokies.

Next time they do Pearl Harbor on the History Channel, dig the array the radar ops were using at about 130 MHz. It sure looks like either a set of bedsprings or a 32 element colinear.

Sheeeet - I remember our first phone number in Pittsford (a suburb of Rochester) - Pittsford 326. Oh, forget the Pittsford, it was just 326. You had to get the Pittsford operator. Yup, they had a ton of telephone operators. What a mess to call the grandparents. We had the routing numbers written down as it might take a ton of time getting the call through otherwise. My grandparents (in later years at Black Lake, NY) were on a CRANK PHONE system. 3 shorts and a long ring was for Dr. Drurey. I believe their phone was 4 short rings. Good lord, I'm showing my age!

MURS is nothing but the itenerent band for business thrown open
for general use without a license. I don't know if
the FCC will expand MURS but I don't think they will because
of the crowding on the VHF stuff. GMRS describes your
problem to a tee, higher powered radios are allowed on
GMRS and the physical capability on short distances is
about the same. 460 GMRS has plenty channels in the
service to do it justice. However, I would caution you
to get legal if hunting should you run upon a Possum Cop,
(game warden to our non rural reading public) questions
could be asked since some states frown upon radios being
used in hunts. Also, some VHF Channels could be in
secondary use in your neck of the woods if you are some
distance from a river or navigable body of water.
Licensed users tend to get testy. FM is very easy to track
even easier than a gut shot deer with an artery wound.

GMRS would be my suggestion, cost is comprable and the
licensing is easy, just fill out the paperwork. As

an NRA member, I stress firearm safety and legal hunting which includes having all elements of the hunt above board. In the field, our actions as hunters reflect upon us in everything we do and having out of band radios can lead to the public thing we are untrustworthy of taking care of the resources.

Aaron,
I don't think anyone in their right mind and some in their wrong mind
would own up to this lie. The subject in question in the original post
this came off did not even own up to his lie until he was at the cop
shop,
at interrogation and told the penalty in front of his lawyer for
entering
a knowingly false statement in a Police record (called
misrepresentation)
which is 4 years in Louisiana. His lawyer then read him the riot act
after he could not produce an Amateur License. Needless to say the wet
stain on his chair did not come from his bravery. Wannabees are
everywhere, in every profession, calling and avocation.

I'm new to this group. I drive a two man semi truck. We listen to the radio (AM/FM) over headphones so as not to wake up the driver who is trying to sleep.
I have tried to wire the CB radio in on the same headphones, but whenever I key up the mike, I get terrible feedback.
I separated the grounds with capacitors and used shielded wire, but I think the cb output reverses back in the radio amp somehow. Is there any way I can make this work? I don't want to use one ear for each radio. Thanks, Shadetree

Try using a mixer of some sort. A stereo mixer that would do the job is available at Radio Shack for about $40. It would take some interesting wiring, and some levels setting, but you might give it a shot. It requires a 9V battery, too, but you could probably use a cig lighter stepdown transformer to do the job.

Anyone have a TR-193WX base?

I saw them at:

http://www.hyelectronics.com/tr193wx.htm

Do they work at all or are they POS?

I have to say, I was once in CB radio for many years, and the stories about what the FCC is doing are getting better all the time. If you like to know what the FCC is doing, just witch when they show up at your door because your running an AMP, or out of band radio, then you'll find out for sure.. :)

I still hear that the FCC rides in white van's too, but the truth is that the FCC drives unmarked cars with a small device to track you down. You'll never know till they knock on your door... We call it fox hunting, just ask a HAM. I have tracked down many CBers who have been, as you all call it, bleeding on the 10 meter ham bands...

No private investigators needed... :)

Neither one Phil. Seems like there is a CBer, who goes by the Handle of "Twistedhed", on the "rec.radio.cb" news group. He made some comments about freebanding etc., and I suggested that he contact you since you had in fact worked for the FCC doing some enforcement activity, and could give him the straight deal right from somebody who has done it. Needless to say he wiggled every which way he could to avoid the issue that he does not have to courage to contact you to ask some questions. In fact he's mad as heck about be branded a chicken on the group for not contacting you. So he spends hours forging messages from me (there are several on this group alone right now), or several others, as a means to get even, and hopefully to discredit the "framed" individual with obvious crazy comments in the messages. However it seems like he can't even get his facts straight for something as simple as the location of the Detroit FCC field office.

Shadetree,
I agree, use a mixer and 'mute' the music on transmit.
(FYI - Using a capatitor to 'seperate' the grounds is
exactly the wrong thing to do. RF is alternating current
and a capacitor passes AC.)

Scott,
Guess it depends on what you use for a 'yardstick';
1. Anything over $100.00
2. Anything you can't plug into a wall outlet.
2A. anything that 'sucks' in the sides of a battery.
3. Anything that gives you a hernia.
4. Anything that requires you to call the power company
and tell them your turning it on.
5. Anything bigger than yours.
6. Anything that causes the street lights to dim.
... and on, and on ...
'Doc
PS - I like 2A the best.

I have little faith in the FCC. I contacted them with an intereference complaint. My grandparents are getting horrible interference from their next door neighbor, a ham. It comes through everything - the phone, the stereo, the TV... they said they would only investigate if I had evidence of illegal operation. When I asked how I would obtain evidence of illegal operation, I never got a reply. You'd think they'd be willing to go to this ham's house to see if he'd be willing to have his station inspected for illegal operations. I believe the FCC selectively picks the biggest known illegal operators and goes after them for the publicity. They don't care about the day to day complaints.

Hello Scott:

I always see small yagi's for the 800 and 900 meg band at the TRW swap meet, and in great condition. In fact brand new. My guess is that some commercial radio system users are quitting the higher frequencies, and going to lower frequencies, for better communications reliability.

I know for a fact that the Los Angles City Fire Department is looking else where for their communication requirement, other that the present 900 Mhz band. The county of LA is on 470 MHz, and their not always able to talk with each other. You should here the Fire Chiefs swear at the radio system at times.

Ok lets see 856 MHz (or Mc for the real deal) use 6.5 inches as a driven element, .2 wavelengths from that use a 10% longer reflector, .15 wavelengths use a 5% shorter director, or two. Don't worry about the impedance matching, just connect up the coax to the driven element, as a center feed dipole.

Now thats ball park or what. Rock n Roll Dude.

If there is one place on the planet that would drive radio engineers to great heights of alcohol consumption it would have to be LA. The multipath on 900 must be hellacious and there just are not enough radio freqs period on any set of bands, hi band, UHF, Sband, Tband, or whatever. I sure as hell would not want to be responsible for getting info from downtown into the Valley on a regular basis.

Many years ago our radio club was offered the last of the one-way 'calling all cars' systems out of Chicago on what is now the superband AM. Our budget wouldn't lite the filaments of that hog. Even that would not cover LA county.

Now and again you see a posting attributing all sorts of evil motives to the FCC for assigning CB to a skip-prone part of the spectrum. When your problem is how to keep people alive with the technology of the Motorola A-line, desperation is in order.

Hi NG!

I always tought SWR was affected by coax length, and the metal surface right below the antenna. But now most ppl here tell me it's not.

My problem is that I have my antenna at the spare tire behind my vehicle (4x4). But the SWR is in the red zone. I can't get it down a lot by only tweaking the antenna tip. Is SWR realy only affected by the length of the antenna itself? What else do I have to try to get a better SWR? (The range is not realy the issue here, I will only be using the CB on small 4x4 terrains and with 4wd autoclub days.)

With regards,

Vincent

I just recently got back into ham radio after a twenty year absence
and I am amazed at what I have heard so far (in a week) on 2m
and up on 440. On the local 2m machine there is a guy from the
local club with a stopwatch running 24/7 who butts in and orders
users to identify if they run over the ten minute limit by 15 seconds
or so. I guess he's a repeater cop or something. Gotta love that.
On the University of PA linked repeater system on the other hand,
443.700 it sounds like channel 19 of the cb. Nobody identifies and
I swear I even hear them using echo mics. (They need a repeater
cop) I have yet to set up a 10-80 m rig and I am half afraid of what
I will hear there.

There is a VERY SIMPLE way to not be taken in via a "shill bid".

1) KNOW the item you want. Do your research. No excuse for this unless your lazy
in which case you deserve to be sheared like a sheep.

2) KNOW the maximum price you are willing to pay --> IN ADVANCE !

3) If your maximum price is exceeded - POLITELY WALK AWAY.

4) REMEMBER ---> "There is usually another one someplace else
you just have not located it yet".

Follow these 4 rules, and you'll never get taken.

Subject: My Moms Boyfriend
Newsgroups: alt.sex.stories
View: (This is the only article in this thread) | Original Format
Date: 2001-01-26 08:20:41 PST

My friend Jamie graduated high school last year, and she
got a job at the doctors office where my mom and I go for
our "female" problems and checkups. One day she told me
my mom was in and the doctor commented that moms
boyfriend must be an animal the way he always tears her
up during sex. I knew mom had been going to the doctor more
frequently since she started seeing him, but I really thought
nothing of it till then.
I had heard mom and him having sex when they think I am asleep
and mom never made noises with dad like she does with this guy.
After what Jamie told me, I decided to check it out and see if
this guy was hurting mom or doing wierd things to her. I am
a little overprotective of her I guess. Mom is a small woman, about
five foot tall and only 100 lbs with a body girls my age would
kill for. She has always taken good care of herself and at 40 she
only looks half her age. I didn't want this guy hurting her, so I
decided to hide in moms closet to see what he was doing to her
during sex that she had to go to the doctor. I had visions of him
using some huge dildo on her or some other foreign object that
was tearing her up and causing the frequent doctor visits.
One Friday night the boyfriend called and talked to her and I knew
this meant he would be coming for his Friday night fling, so I
told her I was going out. While she was at the store I hid out
in the bedroom closet and waited for him to show up.
After what seemed like hours here they came into the bedroom.
Mom undressed first and he layed her on the bed and started going
down on her. Then she stopped him and started undressing him.
When she pulled his pants off, I could see the buldge in his
underwear. My god, it had to be the biggest dick I had ever seen.
Off came the underwear there it hung, the biggest cock I had ever
see in pictures or in person. It looked to be 12 inches long and really
fat. My mom took it in her hand and guided it to her mouth. She
could hardly get her mouth around it. It didn't take him long to
get hard and I swear the thing grew another couple inches. No wonder
she was getting torn up. The guy had a cock like a horse. I was going
to sneek out at this point cause I knew now what was happening,
but I was kind of turned on watching my very own mom sucking
on this monster cock. I had to see him use it on her. I didn't have

to wait long. He asked her how she wanted it and she told him to give it to her from behind over the edge of the bed. This worked out perfect for me, cause she backed her ass over the edge on the side where I could see everything. I wish I would have had a camera cause I could have made money off the film I could have made. I have seen some fuck films at my boyfriends house, and this guys cock was bigger than any on them and my mom is way prettier than those hogs on those films. He had to work at it to get that thing in my mom, and he started real slow and worked up the pace till he had her moaning and groaning something fierce. I noticed he only ever got half or a little more cock in her before she would holler and he would apologize and back off a little. I decided to sneek out so I could go over to my bedroom and finger myself because I was really horny from watching old monster cock reaming moms hot little box from behind. I waited till just the right moment when mom had her face buried in the pillow and he seemed intent on watching himself going in and out of her to slip out of the room. Just as I got out the doorway I caught a glimpse of him looking up and seeing me. I figured I was in deep shit, but he never said anything because after he left, mom never said a word.
I thought I was ok, and then it happened. The doorbell rang one day when my girlfriend that started this all and I were home alone and it was him! I answered and told him mom was gone for the day. He said "thats good cause I wanted to talk to you anyway" about the other night.
I was busted for sure. I asked him in and introduced him to my girlfriend. I offered him a beer which he took and commented that we could take ours out from behind the table cause he had seen them and wouldn't tell on us anyway. After all he said, we don't have any secrets anymore do we? I chuckled nervously and said, I had no idea what he was talking about. He told Jamie I was watching him do mom the other night from the closet. She laughed her ass off and called me a pervert. He started laughing too and asked if I liked what I saw. I told him the whole story and he just laughed and told me that I should have known he wouldn't do anything to intentionally hurt mom.
Jamie asked me then how he was hurting her, and I told her he was just a little too big for a tiny girl like my mom.
Her eyes lit up and she said "let me see it Rick", Kayla has and I want to see it or I'm going to tell her mom you two are keeping secrets from her. I was surprised when he replied, "you're going to do more than see it you little bitch" if I get it out you have to blow me while Kayla watches since she is into that sort of thing now. Jamie told him she had no problem with that and to whip it out. I wish you'd have seen the look on her face when he pulled his pants down. There it hung kind of wierd looking because it was soft. The shaft was thicker than the head and it was sort of lumpy looking. He took it in his hand and held it out and order her to suck it. She went after it like crazy! I couldn't believe what I was seeing. It hardened up huge like it was when he was drilling mom. Jamie stopped sucking and took a long hard look at it. How big is that thing Rick? You make my boyfriend

look sick. Fourteen and a half inches he said. If you think this is
big, you ought to see some black guys I know. They are even bigger.
But, now that you have it sucked up good and hard I want to put this
in you and give you the fucking of your life. She was reluctant at first,
but after a little coaxing she undressed and we went to the bedroom.
He told her to get on her back and he would take it easy on her. She
was sopping wet you could tell and he easily popped the head of it
into her and followed up with some short strokes as she moaned and
groaned. "Work it in as far as you can she said" It feels so good. After
a couple minutes he could get it all into her and she screamed and
moaned the whole time. They came together and both were completely
worn out. Then he looked at me and said "it"s your turn now cause I'm
not done yet". I said I couldn't because he was my moms boyfriend
after all. He told me what happened between the three of us that day
would be a one time deal and nobody would find out. Jamie told me
I had to try it because she had the best orgasm ever with him.
I was so fucking horny I decided it didn't matter and I took off my clothes
and jumped on the bed. He took a long look at me and commented I
had a petite little body just like mom and he was really going to like
fucking me. I just turned eighteen and had only ever been with one
boy before and I was so excited at the thought of my moms boyfriend
fucking me with that big cock I could hardly stand it.
He got down and ate me like crazy and I must have came five or six
times with Jamie cheering him on. She was back to sucking him off
again while he was doing me. After he had me about crazy he
got up on me and inserted that big dick and started slowly fucking me.
I never felt anything like it in my life. It felt like he was going to rip
me
apart every time he pushed it into me. No wonder mom liked him so
much. I could only take a little over half of him and Jamie made fun
of me and I told her she just had a big sloppy puss and it made her mad.
He just laughed and told me to shut up and enjoy it. When he was
ready to cum, he pulled it out and made me suck him off the rest of
the way. He came and came and I swallowed hard to make sure to get
every last drop. I was completely worn out and so was he. We all got
dressed and he gave us each a kiss on the way out and promised to
never say a word.
He never did tell mom and she is still fucking him to this day. So are
Jamie and Me and all of our girlfriends that we have turned on to him.

Vince.....I am going to open a can of whoopass with the coax length police, and the swr police here when I reply here but oh well.
SWR is affected by all of those things you mention and others. Length of antenna, length of coax, mounting location, physical connections (good solder joints and tighness of connectors) and type of antenna. If you don't want to fool with it and just want to talk short distance, for your application, here is what I would do. If you are happy with the mounting location on your 4x4, then leave it there. I would try to make sure your swr is adjusted as low as possible and just live with it. Arguements will be you will burn up your radio (possible but not likely) and that you are loosing all of your signal output (this part is true and varies with how bad your swr really is) but... if you are doing close range transmissions usually within sight of each other or even vehicle to vehicle like we do when up in the mountains playing in the mud, you will be all right. You just aren't going to set any distance records, and the possibility does exist that you could waste the output transistors in your radio if you key down for extended time. We have purposely tried to cook radios in the shop running them into a bad match keyed down for a half hour or more and the failure rate is almost non existent. Now....If you are running an amp (god forbid) it will go Nuclear with bad swr in a real short time.....
Mr. K
PS>You didn't say what kind of antenna you are using, but if it's a whip mounted on the tire rack, you would do better to mount it on the rear bumper.
My recommendation would be the biggest fiberglass whip you can get your hands on mounted to the left rear of the bumper. Use a tie down to the windshield when you get in the rough stuff so it isn't whacking the hell out of everything you go under.

> Now....If you are running an amp (god forbid)
> it will go Nuclear with bad swr in a real short time.....

No amp. Is not needed vor short distance :)

> PS>You didn't say what kind of antenna you are using, but if it's a whip
> mounted on the tire rack, you would do better to mount it on the rear
> bumper.

Rear bumer is plastic for most part, so no grounding :-/ Beside that, my
door opens sideways, and an antenna on the bumper would block it. Now it
turns nice and cosy with the door :)

> My recommendation would be the biggest fiberglass whip you can get your

Tie it in rough is a good tip I hadn;t heared. Didn't notice others
doing it, but I'm happy you mentioned it :)

Hello Dick: I have not been on the ground floor with the consultants, that LA uses, for determining the radio system feasibility, pity.

I believe that someone isn't doing their job or has not taken into account all variables, or even has been told not to do their job from political pressure for whatever reason. So the communications services suffer, the people suffer ect. And its just to obvious that the higher frequencies are not the answer, and that the system of different bands is not properly engineered.

And to throw the icing on top of all that the LAPD is now all digital. I am sure most communications work, but when the "Multi Path", adjacent signals, to much space loss, and many more things will cause the digital communications grief.

I would think that a satellite used as a repeater, on some even higher frequencies would work well. Buts thats another story....

I have good friends that are Motorola Nut Cakes that have all kinds of old equipment, and live and breath this stuff. There also big time CB'ers and hand out on 2 & 6 meters FM. It kind of kick to visit their shop, its like being in the Twilight Zone, old Motorola radios, and old Juke Box's. I am waiting for Broadwick Crowford to come out and say: "2180 to Headquarters"

Hello Jr135:

Yes thats true but lets get a few things straight first. One should have a great antenna, and a great antenna installation, and a great antenna installation up high.

Using a great antenna system, most of the time you woun't need an amp.

But it you do have a great antenna system, then use a amp, then you will kick ass!!!!!!!

Hello Vincent:

If the antenna is mounted onto plastic, with no connection to the vehicles body with the shield at the antenna end, this will cause a high SWR.

Also if the antenna is mounted on top of the spare tire carrier, and has a any length that is close to the vehicles body this will also throw off the SWR.

The coax in this case is not the problem, unless its shield is not connected to the vehicles body, ant the antenna end.

Ever heard the saying about buying a "Pig In A Poke" ?
It may just be a Hoosier saying, so I can't expect you
foreigners (non-Hoosiers) to understand. :)

> 3. Having a decent rep is worth 6.8% and growing as experience is gained.

Sure means a lot to me, that's the thing I look at next after reading about
what the sale item is and the sale info. Needless to say "shades" and
negative feedback mean a lot in this "caveat emptor" world.

> Hey, guys win Nobel Prizes for discovering that you can get better prices
> from people who trust you and don't build in a margin for getting the green
> weenie.

I used to work in a new car dealership as a mechanic. After you
have been around a few car salespeople you come to learn all about
the dreaded "Green Weenie", normally the used car buyer gets it!
And the poor service people get left holding the bag to fulfill
the promises made by the salesperson. ae "This car gets at least
75 miles to the gallon and NEVER breaks down!" On second
thought maybe it's the service dept that gets the "GW" :0

> what is a "shill bid" ??

It's a bid that's made in an effort to run the price up. It's made by someone on behalf of the seller, who has no intention of buying the item. It's been done for years at regular auctions, but it's not as prevalent as it has been. In online auctions, a seller would probably have a second e-mail address through an ISP that he doesn't care about getting booted from.

Message-ID: <15673-3BFE7382-98@storefull-128.iap.bryant.webtv.net>
Source record: 105364

From: vhfradiobuff@aol.comspamsux (VHFRadioBuff)
the FCC drives unmarked cars with a small device to track you down.
You'll never know till they knock on your door... We call it fox
hunting, just ask a HAM. I have tracked down many CBers who have been,
as you all call it, bleeding on the 10 meter ham bands...
No private investigators needed... :)
--
I have little faith in the FCC. I contacted them with an intereference
complaint. My grandparents are getting horrible interference from their
next door neighbor, a ham. It comes through everything - the phone, the
stereo, the TV... they said they would only investigate if I had
evidence of illegal operation. When I asked how I would obtain evidence
of illegal operation, I never got a reply. You'd think they'd be willing
to go to this ham's house to see if he'd be willing to have his station
inspected for illegal operations. I believe the FCC selectively picks
the biggest known illegal operators and goes after them for the
publicity. They don't care about the day to day complaints.

--

"Exactly. I have in my possession a hand signed letter from the Tampa
FCC office concerning a complaint signed by an entire club. The
complaint was lodged against a well known and long time agitator that
blows
ridiculous wattage ALL THE TIME. The gist of the letter: "Although we
sympathize with your position, the FCC at this time is not investigating
non-safety issues. In the event this should change in the future..etc.,
etc.,"
Anyone saying differently is talking through their fedora."

Dave or Debby <truth@planetc.com> wrote in message
news:3bf81562@news.planetc.com...
One BIG difference between NYC & Job: Job WAS RIGHTOUS. NYC is full of
wickedness, down to the core of the apple, with very few rightous there.
I'm afraid it definately WAS judgment, especially to twin towers whose
nicknames were SODOM & GOMORRAH !
Dave!!!!!!!!!!!!

You seriously worry me...
Justifying the murder of 1000s of people by saying that the terrorists
were carrying out "Gods Judgement". This is the same excuse as used
by terrorists to carry out such murders.

-God will often crash an aircraft with loss of all life in order to kill
one person, so I wouldn't put it past him to have done the same with the
towers.

Would God tell man not to kill, and then make them break that rule to
carry out a "judgement" on his behalf?

-Of course! God has no morals. Collateral damage is not important to
God.

Sounds like one of Satans tricks to me,

-God is the deceitful one. Remember how in the Garden Satan showed Adam
and Eve that God was lieing? Since then God has used Satan as an excuse
to mess with us.

If God wants someone dead, then he can do the job himself..

-God is a great killing machine, but he likes to blame others.

Brainbuster.

-Barry

Scott, I have always said that I change nic's, but they are all used under my same Isp, just as you have made several changes, just because you don't like what I have to say doesn't mean I am any different than you re: NG posts, that is. Yet, Landshark has been caught many times, all the while under the guise that he didn't do it then when confronted with indisputable evidence he is forced to admit it, why is it ok for him to do this yet If I do it you guys cry like babies. I think I know why because the keyclowns have a different standard of rules regarding them or one of there own. When one of the AKC's speak about about illegal amps or freebanding they are doing the same as you are doing when you say "were just" talking about illegal amps, just like you don't want to hear them telling you amps are illegal, they don't want to hear every other post about how to hook up an amp or what size alternator to use, or how to mod a radio. It goes both ways whether you want to admit it or whether you like it or not. Yet, I always see the double standard in action the gang mentality prevails the AKC are out numbered in the NG that's for sure but that won't stop them nor will the threats against them, nor the forges of us, as innocent as you think illegal CB is, it is just as innocent as peeing in a swimming pool it's ok if one person does it but if everyone does this it will be no different than swimming in your toilet. Good Day!

Coax length only affects the reading on the SWR meter, not the SWR itself,
SWR
versus VSWR. The only way to get a fairly accurate measurement is by using a
Electrical 1/2wavelength section of coax,(492xVF/F). To be blunt your
Velocity factor
is probably .66 and the resonant frequency your using is 27.185, Formula-492
x .66 /
27.185 = 11.94ft. coax length.
Now that you know the deal with coax length, dont waste your time messing
with it.
The ground plane aka counterpoise aka reflector is causing your headache
because
the spare tire rack doesn,t contain enough metal to provide a counterpoise.
Try running a 8gauge braided copper wire to the frame of the vehicle from
the antenna bracket. Remember we are dealing with current flow here and
grounds are the most important. Make sure the antenna bracket is assembled
correctly with a fiber washer separating the center conductor from the
ground side. Try removing the spare tire rack
and scraping away any paint or rust that may be inhibiting your ground path.
Make sure the coax is not pinched or cut and install a chassis ground on the
case of the radio when youre all done.................Good Luck

I have a feeling that your cb uses the mic switch to unground the internal spkr during tx. You can check this by removing the mic from the radio. If the "S" meter is still showing an incoming signal but nothing is heard from the spkr then this is probably the case.

The feedback is most likely the result of the stereo ground acting to keep the cb spkr alive during tx. You probably have enough mic gain so the mic picks up the tx audio which is coming thru the headphones at hi volume and causes a feedback not unlike a rampant PA system.

Installing the caps wont stop it. The caps still pass the audio coming from the cb audio output just like there was a direct connection to ground.

To prevent this from happening, you'll need to install a relay or fet to switch the cb's audio path off during tx. You can put the relay inside the cb and break the hot audio lead from the external spkr jack or whatever other means you've used to extract the headset audio from the radio.

Not hard to do and any shop can do this for you at a minimal charge I'm sure.

A "beam antenna" composed of several directional elements is real touchy at that frequency to get right. However a "corner reflector" may work just fine for you, and they are easy to build. For some back ground info look at the material at the following site. Scaling the antenna from the example design frequency to the one you're interested in is straight forward. Just multiply the dimensions by the ratio of frequencies so that the elements come out shorter.

Hello Jim: BE Advised:

The book "The Truth About CB Antennas" has a bunch of great info in it. But the antenna callouts the dimensions have not been proven or tested.

One of the locals had made the 5 element beam to the dimensions, and we had to lengthen the element to make it work. Eznec said the antenna was working on 27.800 MHz and not the CB Band. Well thats what the antenna analyzer said also.

If you look at the book "Beam Antennas" also written by Orr, there is a blurb in there about the antenna dimensions being verified or at least computer verified. Its possible there was a glitch somewhere in the antenna dimensions, in older books.

Be advised.

Heres the MaCo wed site for their antennas, with the dimensions. Also be advised that if your going to copy a beam antenna and such, that the elements have to be the same as in the assembly instructions, or the elements will work at another frequency.

http://www.majestic-comm.com/assembly/index.htm

Example a element made from 5/8" OD tubing, 72" long, as the center piece of a beam antenna with the two ends 1/2" OD tubing 69 inches long, will be a total length of 210 inches..... If this same element is made from 7/8" OD tubing, as the center piece, and the ends pieces are 3/4" OD tubing 69 inches long, will have the same length 210", but will work at at a lower frequency.

If the elements OD are smaller, with the same lengths, it will work at a higher frequency. Most antennas builders don't know this.

The ARRL Antennas Book doesn't explain the antenna element scaling very well. But there are programs that do antenna element scaling.

Should you need help tuning the antenna I can help. Feel free to e-mail me.

> vehicles body with the shield at the antenna end, this will cause a high
> SWR.

The tirecarrier is metal, and grounded to the vehicle. I measured the
inpedance (ohm) and that was close to 0.

> Also if the antenna is mounted on top of the spare tire carrier, and has
> a any length that is close to the vehicles body this will also throw off
> the SWR.

The entire backend top is polymer (plastic) and glass. Only metal is the
carrier, the spare wheel and the lower part of the backdoor, wich is
actualy below the antenna mounting point.

> The coax in this case is not the problem, unless its shield is not
> connected to the vehicles body, ant the antenna end.

I checked the connector today, and gained a little bit, but not the big
factor I was looking for :(

I agree with the other posts. The length of cable is not an issue and your problem is a lack of a good groundplane. I suggest that you try a CB marine antenna. These antennas are design to operator without a groundplane. However, they are probably not design to handle high power. Looking at shakespears webpage it looks like there antennas are limited to 25 watts max. Well with in the range of a legal CB radio.

Changing the coax length will only give the 'illusion' of improving
SWR at the radio, but actually does nothing. It sounds like you have
a grounding problem. You need to mount the antenna on a part of the
vehicle that is connected to -lots- of metal like the frame, or the
body if it's all metal. The best place to mount it is the roof. If
distance isn't your thing, then a mag-mount might work best for you.
It might get knocked off once in a while, but it won't break like a
fiberglass whip.

Don't be scornful. The software was installed to give
header-scrutinizers like you some amusement.

Everyone has seen something for sale that was marked "as is". Those
words have the effect of removing the seller's responsibility of
"implied merchantability", which means that the item being sold works
for the purpose it was intended. If you buy a radio that isn't marked
"as is" and it doesn't work, you have the legal right to return it.

By the same token, when someone writes or says something there exists
an "implied truth" to what is written or said. There are a few minor
exceptions to this, such as fiction, humor or parody. But unless it
is obvious that the statement is not true, the writer/speaker is
implying that it -is- true. Have you ever seen the disclaimer at the
end of a movie, "All characters are fictional...purely coincidental"?

I should also mention that when a seller labels a product "as-is",
that negates any other claims he may make about the product. Remember
that when you browse through ebay.

> --
> 714 Sandpile,
> The Mad Dog wavin' good bye
------------------------------
For Vincent,

You are correct in knowing the antenna uses whatever metal is closest as a
groundplane. As Mad Dog pointed out, your spare tire carrier is not going to
provide much surface area and needs to be electrically attached to the
remainder of the body that the antenna can "see". If possible, attach a
short ground wire between the swinging arm of the tire carrier and the
carrier brackets. Basically you're shorting out the hinges and allowing the
vehicle body to more effectively become part of the groundplane. If the
carrier hinges are mounted in rubber then you should find a way to attach
the ground wires to those bolts having direct connection to the body.

For Mad Dog,

Your reasons for grounding are accurate enough however the method is where
we disagree. The antenna predominantly uses the metal that it can,
literally, see as the return path. The metal closest to the antenna being
the most important. The length of the ground wire is rather important and
```

begins to lessen its effectiveness as the length approaches a couple feet. I figure it would need to be about that long or longer to reach any frame members on that vehicle. Also, the frame rail isn't in the direct "view" of the antenna and won't be carrying much rf current back from the antenna.

As you may or may not realize, the groundplane area closest to the antenna feedpoint has the most capacitance to the antenna. The capacitance decreases with distance away from the feedpoint. The rf current will be highest on the metal skin closest to the antenna and decreases with distance.

I don't know about Mrs. A, but I went out and enjoyed another paid
holiday day. I started out topless, after washing and drying my
baby, but that only lasted about half an hour. It just wasn't
THAT warm! I didn't put the windows back in until 3 PM. Got
cold by 4 PM. Now it's dark at 5 PM. Is it dinner yet?

Hello JR135: Yeah Ok your in the UK, been there done that a few a
while.

Try talking to the guy around the corner, he may not even be running a
big amplifier. He may just be real close to you causing your receiver to
de-sense.

I would say most guys on the ham or CB bands are pretty reasonable.
Maybe he can even help you out somehow. And consider that you may be
causing interference to him somehow also.

Anyway its worth the effort to have a chat, ah?

You will always catch more fly's with honey than with vinegar.

That piece was kept under wraps by Twain's daughter so long that the only
paper copy I have is from 1944. Never thought to see if it ever made it
back into print.

It is nice to be able to do it more than 4 years out of 11 and confirm it
cheap via a QSL bureau. It is even nice to be able to put them on the wall
without admitting to rule-breaking. Beyond that, you're dead right.

I responded point by point, and not to mention you did bring of the subject of the "Ranger" line of radios when the discussion is pointedly about Doug's 706 as one example. If you want the subject, and debate, to remain focused and on topic you need to keep your comments focused and on topic as well.

I'm not worried about it because it's not your E-mail address. Of course what about all of those forged messages in the other news groups with my E-mail address in it? Between you, Twisted, and others, are the responsible parties for that nonsense. And as long as it continues I don't have any reason or motivation not to continue to point fingers. Hey if Twisted felt free to accuse anybody and everybody it seems only fair the idea is applied equally to everyone on the group.

As long as you, Twisted, and several others want to continue accusing other members of this group of posting forged messages all over Usenet without any verifiable proof, that same can be done to you. When it gets repeated often enough and long enough people will believe it, just as happen to several other current and former posters to this group. So as long as you, and your cronies, continue to make your false accusations, the forgeries continue by whom ever, I don't see any other course of action. Of course some idiot will comment "well if you stopped your posting of fake messages, porn,...", well I can't stop something I'm not doing. As far as my comments goes the 1st amendment grants me the right to express my opinion, unless you not an American like Mopar, who is an American by accident of birth, whose frequent comment is to "keep your opinions to yourself" a very un-American value for a professed patriotic American to have.

Rule breaking?????

Like going 60mph in a 55 zone?
Like almost stopping at a stop sign?
Like going through a pink traffic light?
Like bypassing a busy intersection by cutting through a subdivision?
Like fudging charitable contributions on your tax return?
Like taking a few extra minutes during lunch?
Like making a personal telephone call on company time?
Like backing into a parking space?

And talking skip is the most minor of all the rule violations listed.
Just ask the FCC. They could care less.

Like gee, Dad, everyone does it. Thought I had seen the last of that when my son got out of high school.

Don't overestimate your importance to the world. Break the rules like a man, take your punishment (if any) as a man, and quit trying to justify it.

While you are at it, turn your hat back around, shave that pubic hair off your chin, and get that dumb look off your face.

In case you didn't know ... Please pass it on.

Terrorist pilot Mohammed Atta blew up a bus in Israel in 1986. The Israelis captured, tried and imprisoned him. As part of the Oslo agreement Israel had to agree to release so called "political prisoners". However, they would not release any with "blood on their hands". A well meaning American President, Ronald Reagan and his Secretary of State George Shultz "insisted" that all be released. Thus Mr. Atta was freed and eventually "thanked the US" by flying an airplane into tower one of the World Trade Center. This was reported by many of the networks at the time that the terrorists were first identified. It was censored in the USA from all later reports. The American public must be made aware of this fact.

Hello Dick: Is it possible to have a strain relief a foot or two from the mini UHF connector. That would attenuate the vibration big time.

Or I could send you some RG142B coax, it has a Teflon Dielectric, with a solid spring steel center conductor silver plated. That is designed for rough and snotty service. It will take a bunch of abuse and keep on ticking big time, I'll even throw in the Silver plated PL-259 connectors and adapters.

This is the good coax I replace the cheap junk coax off the Wilson and K40 antennas. I have antennas on my "Yep I am a Redneck Truck" that have been there for over 10 years, that are still going strong, from all the wear, teat, vibration, and thousands and thousands of watts ect.

Also the RG142B can be wrapped around a 2.4 inch Torrid core with quite a few turns, to allow for a significant amount of inductive reactance on the outer surface of the coax. Attenuating coax radiation, and or receiving noise from the shield of the coax, picking up local ignition noise, or fuel pump noise, or a vehicles computer noise.

Jay in the Great Mojave Desert, ... just down the road ah ways from the fillin station.

Got an even better idea. When the Motorolas die, replace them with
something else. Hate to ditch some semi-decent radios over a lousy coax
connector but I did not design the trash.

Actually that is exactly what is happening.

That wasn't the survey question. The question was "did you ever tell anyone you were a ham or let them assume you were a ham?".

Here's an example. Tim Nebo is on some bootleg frequency with his Yaesu FT-whatever, pirating away, calling "cq cq this is kp82 qrt calling cq qrt" or whatever he says, and his signal is getting into the phone lines. The neighbor knocks on the door and says "Tim, I can hear your ham radio on my phone". Does Tim say "Oh I'm not a ham, I'm a bootleg freebander" or does he merely let it slide?

Or how about Moparholic. Let's say he is at a barbecue and his aunt comes over and says "So Uncle Waldo tells me you spent a lot of money on your ham radio setup. I'd like to see it sometime". Does Mopar say "No, I'm not a ham, but I do operate ham radio equipment illegally on CB" or does he just keep quiet about it and show his Aunt the Collins gear?

Really, I'd like to hear from everyone about their experiences in such circumstances.

Hello Dick: Ok good deal, if your good in the call books I'll send you a few lengths or what ever you need, and connectors and a few other "Jay in the Mojave" Memorabilia.

Let me know how long a lengths you will need.

Price, ah yes this is the good part. No money needed but I do want to drop on by some time and tilt a few, and tell war stories (lie a lot). The XYL will say just after a few minutes, "when is he leaving"

I visit DC, and the soundering areas about twice a year now on buz. Its even a tax write off for buz. But last year the called attention to by bar bill, said something about it being too high ect ect..... "No one drinks 27 drinks a night, for days on end" Maybe I used the wrong form?

BTW, let me know.

Jay in vast American Desert, where most historic sites are just big hole in ground with sign in front.

OK then for anybody who's reading this thread and may be confused or misled, amps such as as Bob And Train are talking about are NOT legal for CB. Use of them can result in penalities of up to $10,000 and jail time, and that's no parking ticket. Besides, they are contrary to the basis and purpose of CB, create harmful interference to other users, and make you sound like an ass on the air.

> >
> > -Aaron-

Police and firemen have groupies as do rock musicians: all we have is Aaronia.

This whole issue has me buffaloed; proving perhaps only that there is no Red S on my sweatshirt. Who gives rat tits? There is no inherent conflict between the services, no good reason why being one, the other, or both proves a hill of shit. (Pardon me, fertilizer storage facility). And this from a woman who pretends to be neither one but is almost for sure a Lifer Tech who are a breed unto themselves. I still think this is one giant sublimation exercise by someone dreading a code test.

The concept, of course, is that outlaws are ham wannabes. While some yo-yos like Tnom sure as hell look that way, it really does not appear to be the case. Nor do wannabes of any stripe make good at being the real thing in any event. The idea of doing them both is as deadly to them as it is to Aaronia.

Over the years I have run into exactly one phony callsign. I got dragged to a CB gathering by some of my students when I taught license stuff. The supposed General quickly left and was never seen again so I did not even get to meet the stiff. I felt comfortable and apparently so did most of the others. BFD. That, of course, does not include the WB5LID and WB5QLF we assigned to some Arkansas types that broke into our 28.600 Prevert Net -- leading the world to greater heights of preversion.

So what in hell is the big deal? Just killfile Aaronia under all her guises and let her rest in pieces.

For those who have the idea of splitting the ranks:
http://ah0a.org for the Morse Academy program that is at test speed right out of the box. Use my e-mail; your secret is safe with me. Read the directions, please.

http://www.arrl.org for pubs and poop.

http://www.qrz.com for sample tests. There are several good sites.

I am right on the Callbooks, QRZ etc.

You have all the fun you like in DC. Think of me as you fly over the old Stapleton Field in Denver as all LAXative flights do; I live about 50 minutes ene of there.

The application in question is not all that difficult. I drive PT for a school bus company. They buy a bus, put a 460 radio in it and expect it to last until the last red trace of rust flows down the busbarn yard. If you do it right and don't leave cable where the ladies can hang their laundry from it, it will. We have some old Johnsons that haven't been disturbed in 15 years and they do the drunk runs. but you have to leave some and that is the problem

As radios, the Motorolas have been something of a disappointment but their real failing is those damnable miniUHF connectors. Nice offer but I am not about to re-install the same pieces of shit.

Not much farther than FRS radio. Maybe 6 miles to another handheld. But it certainly gets me 20 to 40 miles into a repeater, then more from there. Same problem as mobile to mobile whether CB or ham - if you aren't using skip, line of sight is going to be short at the height all of these antennas are located at. That's one reason a lot of folk have towers (but not, obviously, on most vehicles).

I would like to find a good used TNT600+ . I prefer it to be in
relatively unaltered condition. I might be convinced to buy an alternate
but similar device if the TNT proves unavailable.
Email me bob_c_89431@yahoo.com
And..for those of you who feel you must inform me of the illegalities in
using this amp..save your time and breath..I'm not listening.
--
-OK then for anybody who's reading this thread and may be confused or
misled, amps such as as Bob And Train are talking about are NOT legal
for CB.

--

"Gee, so this is what looks like in here on a Friday night.....Lelnad,
AA, Sparky...why, just 1 more pup and the litter is back together
again, except for the two that were euthanized, Kari and QRM2000."

Use of them can result in penalities of up to $10,000 and jail time,
and that's no parking ticket.

"Where were we? Oh yes, AMPS! Yes, they are a violation of part 95 FCC
rule, but they also are widely used and can add a big boost to your
signal and aid in DX. An amp is a valuable asset if not abused, and
remember boys and girls, use does not necessarily constitute abuse."

Besides, they are contrary to the basis and purpose of CB,

"Many would disagree. It may have been true at one time, but no longer
do the majority feel as you do."

create harmful interference to other users,

"This is another incorrect blanket statement."

and make you sound like an ass on the air.

"Appears it has that affect on you in here. How do you know what he
sounds like, let alone if he uses an amp?"

The point, Scott, is that high power is truely way overrated - both by CBers and hams. You usually don't need it. If band conditions are rotten, why would someone want to talk 10 times the distance he can hear? If you can't hear 'em, you ain't gonna work 'em. Period. The fact is that someone (ham or CB) running 10 kilowatts is simply causing a lot of interference for other people. A little effort on a decent antenna often will do a lot for for you than simply increasing power. In my case, I got rid of that lousy rubber ducky that came with the HT. Now go grab a tall cool one and get your blood pressure back under control :-)

Interesting. Richard, you are SOoooo right about Ken and Barbie doing the news. I am so happy I got out of broadcasting years ago (1972). The station I was at back then let a ton of people go a few years ago when it was bought up by some syndicate. They simply feed everything from their Syracuse station to their other stations (everything, that is except the local news and weather - which, as you pointed out, is the Ken and Barbie news show). It would be interesting to see if the info Scott got is, indeed, accurate. You can't depend upon our government telling us much very accurately anyways.

> Like almost stopping at a stop sign?
> Like going through a pink traffic light?

etc.

Can any of these be treated as a hobby (such as illegal CB is)? In other words, are they a willful, repeated, regular activity? If so, we look forward to hearing these "hobbyists" saying things like:

-"Think I'll relax a bit and go 60mph in a 55 zone. I know it's illegal but I don't care"

-"That was a great session of almost stopping at a stop sign the other day, lets do it again tomorrow. I know it's illegal but I don't care"

-"I belong to a 'going through a pink traffic light club' where we swap tips on how to go through a pink traffic light better. I know it's illegal but we don't care"

-Aaron-

>where the sludge is coming from. He is asking everyone
>but Lelnad when this will stop. It's like he is scooping
>the fecal matter out of the river with his
>hands but showering under the sewage pipe."

Very colorful.

But between Leland's A=0 and your "" I don't know whose posts are harder to read. Maybe we could have a raffle and use the proceeds to buy you a new newsreader, one that actually quotes in Usenet style. What would we raffle off? How about your slime bag or live well or whatever you call it that you put the fish in?

And speaking of style, why would you use a word like "ascertaining" instead of saying "figuring out"? Using 2 dollar words out of context makes you sound poofy and Fake British Royal (no offense Brainbuster). In the very least, upgrade to a 5 dollar word.

Back to the matter at hand. Let's assume for a second that Leland is the cause of this strife. What would you have Leland do? If you say he must stop posting then that is not solving the problem, that is just shutting down the opposition's right to free speech. At least provide some realistic ideas on what you feel he should or should not be doing. Who knows, maybe you can negotiate some agreement of terms? Take your time, you have the floor, Twist. What do you want Leland to do?

-Aaron-

Ok so you did 2 posts from your computer it is your account you created it
you posted it thru aol just as you did with Frenchy nic. It is the exact
same scenario busted again you are a chronic liar.

MNy CB has 4 watts, thus it should work indeed. Maybe I'll have a look
around for a marine type antenna :)

> Tim

Are you pissed because I used you as an example in my survey question?
But why? It's a legit question.

==========
Here's an example. Tim Nebo is on some bootleg frequency with his
Yaesu FT-whatever, pirating away, calling "cq cq this is kp82 qrt
calling cq qrt" or whatever he says, and his signal is getting into
the phone lines. The neighbor knocks on the door and says "Tim, I can
hear your ham radio on my phone". Does Tim say "Oh I'm not a ham, I'm
a bootleg freebander" or does he merely let it slide?
==========

You gotta admit, it is a good question. Another question: down at the
Wood Chip Stove place when they ask your Mom/Dad/Uncle/Aunt "How's
Timmy doing?" do they say "Oh he's good, he's running a porno site on
the Internet"?

>$350!!!!!!!! Does that come with the automatic asswiper........??

If the radio is in very good to mint condition, the "automatic" auxilliary device mentioned above is not needed. These are very VERY good radios with an extremely quiet receiver and transmits a very clean signal. Most rigs will transmit a clean signal if they're not "clipped & peaked." It's the AR-3500's receiver and frequency stability (No drift a la Galaxy here.) set it apart from most rigs. Take care and 73.

Hi Dick,

Happy Thanksgiving to you and the rest of the newsgroup. I neglected to wish you guys a happy turkey day in my first post and I didn't want you to think I was being rude. Blame it on jet lag. Yes, I flew home to visit my parents on the west coast. Yes, it DOES feel strange to step on a plane post Sept. 11, a damn shame.

Some really good buys can be had on e-bay, especially on items that were never used and as such can be considered new, even after 15 or 20 years. There are also rip off artists as well. Be careful and use common sense. Take care and 73.

From my run in with the FCC in 1975-76
I found out that they concede that many
of the household electronics do not have sufficient shielding to prevent RFI
infiltration. However they still made me buy RFI chokes for all of my
neighbors. That didn't do squat as the RFI was still able to enter the
circuitry after the choke. Then they said "only broadcast between the hours of
....". What a joke, on us!
FYI. I was using a Jet Sounds 23 Channel
radio back then, completely stock with a 1/2 wave ground plane at 50ft. But we
did have channel 22A!

Might be that some of us also have formal educations in electronics. When offering services for hire it is in our best interest to repair any and all items brought to us for service. It is not our business to be nosey little assholes like DOUCHEner as to the application of every item that comes across the bench.

Now..........To answer the ORIGINAL question that was asked and NOT THE BULLSHIT INTERJECTED BY DOUCHEner, that unit (if it still has the original transistors in it) should do about 80-100 watts output.
Train

It might have a metal mesh material to reinforce it structurally? Who
knows.

> > The coax in this case is not the problem, unless its shield is not
> > connected to the vehicles body, ant the antenna end.
>
> I checked the connector today, and gained a little bit, but not the big
> factor I was looking for :(

What did you check to get a gain? This may be a good indicator of where
the problem is.

Is there continuity between the radio end of the coax shield and the
vehicles body?, theres should be.

Is there continuity bewteen the shield and center pin, at radio end of
the coax?

Can you hear local or skip stations? Have to talked to anyone?

fingster,
In general, get the longest one that you can conveniently
mount on your van. Other than that, the 'best' antenna is
the one you like the best, looks the best, or has the best
price. There really isn't ~that~ much difference in any of
them...
'Doc

Try a Wilson 1000 or a K40 both should
work just fine for you.

While it is a good rig, this price is a
little high. I usually see the lower watt
3500 going for between $150.00 to
$200.00 depending on condition. The
higher watts between $200.00 to
$300.00

If you were around a couple months back,
someone made up a bunch of names on
yahoo. I received some 10 different screen nic,
passwords for Google included. I did a couple
from my computer, the addy is clear, but there
were others from some 4 or 5 other ISP's.
Now this moron thinks every time someone
posts from them it's me! Just like Leland
mentioning Twist each post, this guy can't
make a post without throwing out some sort
of derogatory or insulting remark about me
He has been a stain on this group for over
a year now and posts nothing but flames,
so naturally he is paranoid and assumes
every post that disagrees or flames him
is from me, but I assure you it's not.
If I wanted to play the game I would've
gone and bought an account like he has,
one that doesn't have as many restrictions.
I figured that I could spend the money used there
in a better place (Like for Christmas/New Years)
But I kill filed the silly bastard and all he does
is change his screen nic to argue with me, it's
clear that's all he wants to do is argue.

jim there are plenty times when the bands are just opening and just closing that you just need that extra litle punch to make it thru. i agree when any band is open full blast the big power isnt needed to put a heavy signal anywhere in the world but whens the last time you were on 40 meters at night with 100 watts looking for a place to call cq. good luck because your either going to get walked on by another ham 3-2khz's away or the broadcast band interference is going to kill you. the same goes with 20 when it gets really busy. you have to be able to find a spot then hold that spot. if i am in texas running 2kw's with a multielement directional antenna and there is another station in the uk with 2kw's and a mulitelement directional antenna dont you think we will enjoy our qso more than two guys with 25 watts and antron 99's would? those second guys are going to have to pick each other out of the qrm constantly and hope nobody with a station like the first set of guys decides to talk where there at.

>The point, Scott, is that high power is truely way overrated - both by CBers
>and hams. You usually don't need it. If band conditions are rotten, why
>would someone want to talk 10 times the distance he can hear? If you can't
>hear 'em, you ain't gonna work 'em. Period. The fact is that someone (ham

Hi Landshark,

Perhaps, but I LOVE these rigs. Too bad they're not made anymore. Although the nice receiver attribute was passed on the the Magnum 257. I do realize that those two rigs were made by different manufacturers, but imported by RF Ltd. I prefer the 30 watt model. How are the motorcycles? :-) Take care and 73.

Mark

Thats real funny 10 months ago the No Fear screen name did not exist, so you are caught lieing again, you are the one enamoured with me and my screen names No sharkie you are the only one, why did you wait till Oct 2nd to do a test post post using that name? Tried it 2x you did, now all of a sudden it appears 5 x in one day. Just like you didnt make the frenchy post then you finally admit it just like you didnt make the alt.sex.ts post, you are always falsely being accused why Landshark you are a saint.

>I did a couple
> from my computer, the addy is clear, but there

> is from me, but I assure you it's not.

You cannot assure anything except you got caught you are a lieing sack o shit, who has once again been caught, over and over. You have been a thorn in the NG side since you started posting in the 90's now all of a sudden your a saint. Bullshit. What you say is immaterial BS.

> If I wanted to play the game I would've
> gone and bought an account like he has,

I havent bought anything, a few accounts were setup a while ago and i recieved screen names and passwords thru the mail.

Could be, but then it bents realy easely ;)

> > > The coax in this case is not the problem, unless its shield is not
> > > connected to the vehicles body, ant the antenna end.
> > I checked the connector today, and gained a little bit, but not the big
> > factor I was looking for :(
> What did you check to get a gain? This may be a good indicator of where
> the problem is.

The coax was not realy good soldered to the connector. I redid that. But
as stated, here was not much gain, not the big factor i was looking for.

> Is there continuity between the radio end of the coax shield and the
> vehicles body?, theres should be.
> Is there continuity bewteen the shield and center pin, at radio end of

I said power supply. You get a lot less RF feedback when
you have an external power supply. Quote the rest of my
post too, Mrs... Have any stupid comments about any
other part of my post? Open mouth insert foot, Mrs. A.Hole.

---REPOST OF ENTIRE MESSAGE---

Can you put your question in the message body?

Just what is a "power-up kit"? If it mounts inside or on
the radio, it's bad news.

You are always better off with an external "power supply".
The parts in the radio are not meant to handle more then the
rated output. Trying to get more out of a radio just stresses
the parts, creates more heat and can cause squeal and other
instability problems.

Don't cut limiters to make the radio louder. All that does
is cause splatter. Don't tune coils unless you know what you
are doing. Adjusting the wrong coils will show more on a watt
meter, but most just cause harmonics. A watt meter measures
ALL power, wanted and unwanted. Search for an NPC/RC mod if
you feel the need to butcher.

I can talk farther with a 2 pill amp and a properly tuned radio,
then you will with a 4 or 6 pill with a butchered radio.

BTW, a 2950 or a Grant/Cobra 148 is a lot more frequency stable
then a Galaxy. Even a PC-122/TRC-465 is more stable then Galaxy.

Yes they are good rigs, I had one for years
but decided to sell it. I have used the Magnum
257 and do like the rejection and quality of
the signal on such a small unit.
The bikes are good, waiting for my new bike that
I ordered in may to come in. It will probably be raining,
but hey that's all in a days work.

From: S3Buell@SBCGloboil.Net (Landshark)
????????This why you cross posted huh, just to start a flame contest?
Way to go Leland.
??????????????????????????
?????Landshark

"And AA appears to have a personal problem ascertaining where the sludge is coming from. He is asking everyone but Lelnad when this will stop. It's like he is scooping the fecal matter out of the river with his hands but showering under the sewage pipe."

-Very colorful.

"Glad you liked it."

But between Leland's A=0 and your "" I don't know whose posts are harder to read.

"You have a problem seeing what is quoted? Gee, a better newsreader may assist you. Leland had the same problem."

Maybe we could have a raffle and use the proceeds to buy you a new newsreader, one that actually quotes in Usenet style.

"Yea. You can send it to the addy that Lelnad claims to have sent his lingerie to."

What would we raffle off? How about your slime bag or live well or whatever you call it that you put the fish in?

"The slime bag is in Michigan. My live wells are are with my boat which will have a new canopy when I pick it up today. Your curiosity can be cured if you provide a valid email addy. I'd be more than happy to send you another pic."

And speaking of style, why would you use a word like "ascertaining" instead of saying "figuring out"?

"Must be my nature. What exactly is it you lack, that you manage to find fulfillment in concerning yourself with such mundane items such as my choice of vernacular?
You are beginning to look as ridiculous as Lelnad with what you take issue with. He's all over the board, too.""

Using 2 dollar words out of context makes you sound poofy and Fake British Royal (no offense Brainbuster).
In the very least, upgrade to a 5 dollar word.

"No. If you take issue with a moderate word such as "ascertain", I will confine myself to utilizing only generic terms when addressing you so as not to confuse you any further
or fracture your train of thought to the point that you neglect your original and intended topic."

Back to the matter at hand.

"At least you recognize when you go off subject and begin a rant. Since you are offering to act as a diplomat for "Nad, why not tutor him in tactfulness? Teach him how to converse without the anger and to stay on subject without malice."

Let's assume for a second that Leland is the cause of this strife.

"Better yet, let's assume you looked back over all his posts and my posts for the last several days, weeks, etc. Him munging Mopars addy along with mine isn't causing strife? Insultive crossposting isn't strife? Saying that he only does things like that to "bug" someone doesn't make him responsible for any strife that follows because of it? He managed to alienate even those who don't agree with freebanding or linears, ones that WERE sympathetic to his concerns until he got of control and became beligerent, insultive, and drunkenly admitting to using the group as his personal tool to "bug" twisted..hheheh. Perhaps it is you that needs the new newsreader. It appears you are missing many posts. Too bad. It's no longer me that mentions his oft repeated and preprogrammed mantra of "twisted" in all his posts. The entire group watched him unravel."

What would you have Leland do?

"What would I have him do? Well, I could give him a job as a deck hand baiting fishing hooks. Many yankees, especially the women don't like to handle such things as squid and baitfish. If he was able to hone the manual dexterity required for the position and became adept at the job after several years, I would annoint him head master baiter."

If you say he must stop posting then that is not solving the problem, that is just shutting down the opposition's right to free speech. At least provide some realistic ideas on what you feel he should or should not be doing.

"You don't get it. I care more about my toe jam than what Lelnad does. He can do or say whatever he wishes. It just doesn't matter to anyone except you."

Who knows, maybe you can negotiate some agreement of terms? Take your time, you have the floor, Twist. What do you want Leland to do?

"Is this your way of asking me to stop pointing out Lelnad's insecurities, obsessions, contradictions, drunken rants, lies, forges,

name calling, insults, taunts, threats,
chants of me, shortcomings, biases, inabilities, hypocrisies, lack of self control, and anger management problems? Why involve yourself? If it is upsetting to you, you may suggest that your student protege take his loathsome animosity and hostile umbrage to email and spare not only you, but the entire group from his stated objectives. You seem almost as concerned with what I think as he does. Are you thinking of challenging him for the dominate Beta position?"

-Aaron-

Like going 60mph in a 55 zone?
Like almost stopping at a stop sign?
Like going through a pink traffic light?
etc.
--
Can any of these be treated as a hobby (such as illegal CB is)?

"Sure. Riding that iron horse or cruising in your favorite mode of transportation can certainly be a hobby."

In other words, are they a willful, repeated, regular activity? If so, we look forward to hearing these "hobbyists" saying things like:
-"Think I'll relax a bit and go 60mph in a 55 zone. I know it's illegal but I don't care"

"Absolutely. It is clear you have never set foot anywhere near the southwest, nor probably west of the Mississippi. Ever heard of the salt flats? Interstates going through the deserts? How about Needles to Vegas? Blythe? Hell, AA. I'm beginning to wonder if you ever did anything besides sit here and fantasize about what laws we may be intentionally breaking. 70 mph is slow motion in some places and it is SO deliberately broken it is almost an unconscious and involuntary act on a daily basis to the majority of local motorists. Once again your "moral" is not the majority."

Specs, if you had ever seen the 35 question Tech exam, you would never pay anyone to take it. It is designed, with proper ceremony to mark the gravity of the occasion, to let XYLs get on the repeater and bug the OM for bread and milk on the commute home, to let a guy take HTs hunting with the kid, and such earth-shaking things as that. Granted it gives privleges well beyond this but that is the object of the exercise.

To do the General, it takes three and in fact the General is a basic rules and regs exercise like your driver's license on a grander scale. I know there are green stamps changing hands (if not on the scale you might think) but there is a point where even us easy-going types don't go. So I am not the one to ask. I am also not the one to tell because I will be on the phone in about 27 seconds flat.

http://ah0a.org for Morse Academy. Follow directions, it is at exam speed out of the box.
http://www.arrl.org for pubs and poop
http://www.qrz.com for sample tests. One of several good sites.

"Absolutely. It is clear you have never set foot anywhere near the southwest, nor probably west of the Mississippi. Ever heard of the salt flats? Interstates going through the deserts? How about Needles to Vegas? Blythe? Hell, AA. I'm beginning to wonder if you ever did anything besides sit here and fantasize about what laws we may be intentionally breaking. 70 mph is slow motion in some places and it is SO deliberately broken it is almost an unconscious and involuntary act on a daily basis to the majority of local motorists. Once again your "moral" is not the majority."

I have to agree with you there Twist, there are some roads on the east coast such as I-95 Pa and the NJ Turnpike that you will get run over if you go 75 mph, seemed like normal speed was 80 mph we had taken a trip to ground zero last month and when you get off that turnpike road, you find it hard to keep it under 50 mph on the city streets. Have a Good Fishin Trip!

>lingerie to."

The jock strap? Legend is DOUG sent you that jock strap. Are you saying it might be Leland? Do you have any evidence of such? What does the postmark say? When did it show up anyway? Did you show it to the FBI? The Postal Inspectors?

> >What would we raffle off? How about your slime bag or live well or

Here is a valid email addy: voobner@yahoo.com

It has always been valid. Send me email. I reply. Valid. Just like Twistedhed@webtv.net

> >And speaking of style, why would you use a word like "ascertaining"
> >instead of saying "figuring out"?

>"Must be my nature. What exactly is it you lack, that you manage to
>find fulfillment in concerning yourself with such mundane items such
>as my choice of vernacular

Rather than lack, I think I have, curiosity. Your choice of speech (that stuffy way of expressing yourself can hardly be called 'vernacular') is not mundane at all. In fact it betrays a lot.

>"No. If you take issue with a moderate word such as "ascertain", I
will
>confine myself to utilizing

"using" would be more appropriate, not "utilizing".

>"At least you recognize when you go off subject and begin a rant.
>Since you are offering to act as a diplomat for "Nad, why not
>tutor him in tactfulness? Teach him how to converse without the
>anger and to stay on subject without malice."

Think of me like the Pope or Bill Clinton. I'm here to try and find a common ground between Ariel Sharon and Yasser Arafat.

> >Let's assume for a second that Leland is the cause of this strife.

>"Better yet, let's assume you looked back over all his posts and my
>posts for the last several days, weeks, etc. Him munging Mopars addy

Is this one of your terms? No "munging"?

> >What would you have Leland do?

>"What would I have him do? Well, I could give him a job as a deck
hand
>baiting fishing hooks.

So really, you prefer to keep insulting him, and visa versa?

>"You don't get it. I care more about my toe jam than what Lelnad
does.
>He can do or say whatever he wishes. It just doesn't matter to anyone
>except you."

So you don't want peace?

> Why involve yourself?

I told you. I'm here to negotiate a settlement. Maybe we could divide the NG in half, and you stay in the North and Leland stays in the South. Or maybe you could have a small settlment along the border.

>If it is upsetting to you, you may suggest
>that your student protege take his loathsome animosity and hostile
>umbrage to email and spare not only you, but the entire group from
>his stated objectives.

What are his stated objectives. I missed them.

>You seem almost as concerned with what I think as he does.
>Are you thinking of challenging him for the dominate Beta position?"

I wasn't aware there were positions available. What are you paying?

The Astroplane is a modified discone, kind of a log-periodic vertical that will radiate the first six harmonics as well as it radiates the primary frequency. Deadly with a filthy rig or amp. Guaranteed to close the local airport.

Radiates good tho. Nice low angle

The Astro plane is a folded antenna, thats why the length is only 15 ft, it is similair to the mobile antennas that claim they are 5/8 wave antennas, and are only 6-7' tall... Take Care

"Absolutely. It is clear you have never set foot anywhere near the southwest, nor probably west of the Mississippi. Ever heard of the salt flats? Interstates going through the deserts? How about Needles to Vegas? Blythe? Hell, AA. I'm beginning to wonder if you ever did anything besides sit here and fantasize about what laws we may be intentionally breaking. 70 mph is slow motion in some places and it is SO deliberately broken it is almost an unconscious and involuntary act on a daily basis to the majority of local motorists. Once again your "moral" is not the majority."
--
I have to agree with you there Twist, there are some roads on the east coast such as I-95 Pa and the NJ Turnpike that you will get run over if you go 75 mph, seemed like normal speed was 80 mph we had taken a trip to ground zero last month and when you get off that turnpike road, you find it hard to keep it under 50 mph on the city streets. Have a Good Fishin Trip!

"Thanks, but not this weekend. Got the tree up, house lights and the angel on the barn. Went and picked up the overpriced canopy, a bit of shopping and overspent on everything. But you know what? I'm almost done. 6 more items to go and it's a wrap until next year. You have a good weekend yourself, now."

(Aaron H. Voobner) voobner@yahoo.com wrote:
Maybe we could have a raffle and use the proceeds to buy you a new
newsreader, one that actually quotes in Usenet style.

"Yea. You can send it to the addy that Lelnad claims to have sent his
lingerie to."

The jock strap? Legend is DOUG sent you that jock strap.

"Hehehe..GE, AA. For whatever reason,
you somehow feel compelled to share how much you attribute to Lelnad's
words. If you wish to hold him as a legend maker, far be it from me to
change your mind. Besides, it may soothe his ego a bit."

Are you saying it might be Leland?

"The strife? Only if you let him be."

Do you have any evidence of such? What does the postmark say? When did
it show up anyway? Did you show it to the FBI? The Postal Inspectors?

"Um..yea, I gave it to Scully, and he in turn returned it to the saucer
men Lelnad speaks of."

What would we raffle off? How about your slime bag or live well or
whatever you call it that you put the fish in?

"The slime bag is in Michigan. My live wells are are with my boat which
will have a new canopy when I pick it up today. Your curiosity can be
cured if you provide a valid email addy. I'd be more than happy to send
you another pic."
Here is a valid email addy: voobner@yahoo.com
It has always been valid. Send me email. I reply. Valid. Just like
Twistedhed@webtv.net

"Nothing of the sort. It's not your primary paid service. No dice."

And speaking of style, why would you use a word like "ascertaining"
instead of saying "figuring out"?

"Must be my nature. What exactly is it you lack, that you manage to find
fulfillment in concerning yourself with such mundane items such as my
choice of vernacular

Rather than lack, I think I have, curiosity. Your choice of speech (that
stuffy way of expressing yourself can hardly be called 'vernacular') is

not mundane at all. In fact it betrays a lot.

-"Of course you taking issue with vernacular useage is mundane. It is also trifling. You are correct in one aspect, it does betray you. Maybe you thought it flattered you somehow?"

"No. If you take issue with a moderate word such as "ascertain", I will confine myself to utilizing

"using" would be more appropriate, not "utilizing".

-"I understand. Why watch "Jeopardy" when "Romper Room" serves your needs."

"At least you recognize when you go off subject and begin a rant. Since you are offering to act as a diplomat for "Nad, why not tutor him in tactfulness? Teach him how to converse without the anger and to stay on subject without malice."

Think of me like the Pope or Bill Clinton. I'm here to try and find a common ground between Ariel Sharon and Yasser Arafat.

"You always select such poor analogies. Would Kissinger not have been more appropriate?"

Let's assume for a second that Leland is the cause of this strife.

"Better yet, let's assume you looked back over all his posts and my posts for the last several days, weeks, etc. Him munging Mopars addy along with mine isn't causing strife?

Is this one of your terms? No "munging"?

"No, I borrowed it from Mopar, but I am certain he wil not mind."

What would you have Leland do?

"What would I have him do? Well, I could give him a job as a deck hand baiting fishing hooks.

So really, you prefer to keep insulting him, and visa versa?

"What do you mean...KEEP? I wasn't directing anything to him as he continues to keep me as his God and imitate me daily in his email, headers, crossposts, etc. You asked me about him, remember? I would be amiss in my manners if I did not reply to a post in such fine form as yours."

"You don't get it. I care more about my toe jam than what Lelnad does. He can do or say whatever he wishes. It just doesn't matter to anyone except you."

So you don't want peace?

"I have peace, my friend. I sure don't need Lelnad or you or anyone for that. I treat people in kind."

Why involve yourself?

I told you. I'm here to negotiate a settlement. Maybe we could divide the NG in half, and you stay in the North and Leland stays in the South. Or maybe you could have a small settlment along the border.

"I kinda like it just as it is. I told you, I'm here for sh*ts and giggles now. I made plenty of friends and radio contacts here. People will receive from me what they throw my way. That's not gonna change."

If it is upsetting to you, you may suggest that your student protege take his loathsome animosity and hostile umbrage to email and spare not only you, but the entire group from his stated objectives.

What are his stated objectives. I missed them.

"I told you that you were missing posts.
He was asked by another why he feels the need to incorporate my email nic into his name. He replied "It bugs twisted." Nothing could be furtherfrom the truth....if anything, he continues to prove me right about him. Now, if you wish to reread it, find it..the post is there....moving on...his lack of response when asked by myself and several others to take his self-manufactured problem with me to email instead of using the group as his personal messenger service to hurl insultives and call names. In any event, his stated objective is to "bug" me. Maybe he has taken such a callous interest in it and disregarded what's best for the group simply because he can not obtain his goal. Perhaps I should rant and rave, pretend to blow my top, hurl some insults his way...maybe he will think he arrived at his stated objective and stop being so annoying to the legions that have already asked him to give it a rest."

You seem almost as concerned with what I think as he does. Are you thinking of challenging him for the dominate Beta position?"

I wasn't aware there were positions available. What are you paying?

"Start out with a bowl of soy milk with a supplement of vitamins for your coat and bloodmeal enriched soft organic puppy chow until taken on your first hunt. At this point, depending on your response to the gunshots and game, you may or not get a piece of heart or gizzard. If you are gun shy or not responsive, we will withhold the meal the following night and only let you lap some female hog blood in the early AM and a hunt in the afternoon. You'll be ready for sale in 3-5 months. All shots and vaccinations will be inclded, as will your papers.
But enough about all that. Want to bump it down? I'll go sit in the truck and give you a shout. What channel? Better pick a ssb channel so you can reach me."

I have a Demco Band-Alyzer (watt meter) there is a switch on the back that says dummy load in and out. Do I switch to in or out for the dummy load to work.
Also I have a Siltronix Model 80 VFO. Theres a sticker on the back that says to be used for recieve only. There is only one place to hook anything. It looks like a RCA jack and says output. Can someone tell me one what the VFO hooks to. What else do I have to have to make it work.

Thanks
Andrew

Hello All: Ever see the typical women driver, driving in a SUV, holding on the steering wheel is such a way to allow for her nails to dry faster, and talking on the Cell Phone?

Obviously not paying a lot of attention to driving?

Welp I saw her today make a illegal left hand turn at a intersection and hit a large truck. I just walked out the local cheap shit tools R us place, (not to far from the local law enforcement station) When Miss American there, in her SUV, with her left hand up with the fingers all extended, with the palm of the left hand on the steering wheel, and the right hand holding the Cell Phone, not paying attention, the SUV vehicle edged into on coming traffic, and hit the very large truck.

Traffic stopped and, had a law enforcement office was there in a hart beat, and a few others in a short short amount of time. A few of the local AM'ers help direct traffic until the police had it under control.

Still standing there, I was asked by one of the officers if I saw the accident. I said "I saw the hole thing". Now the officers where making sure Miss America was all right, the SUV looked totalled, leaking out all the engine essentials fluids. She sprung out cussing the truck driver, and officers. Then she found her self very quickly hand cuffed. And lead to a police car, I start to laugh.

The officer took my statement while I was in front the police car that had Miss America in the back seat. The officer asked what I do. I told him I am a bitchen guy and a Super CB'er, Miss America yelled with rage, yelling that her old man was a CB'er and that we where in koohoots. The officer taking this all down with a smile and a laugh. I suggested shock therapy for Miss America and repeat driver's training, and clean up trash up on the side of the main drag, for a long period of time. The officer said, I am sure the Judge will know what to do, and thanks for just the facts, man. I said Ten-4.

Maybe just maybe, the world doesn't rotate around people like her! And a vote of thanks to all the CB'ers that helped.

Jay in the Mojave

Read a fiction book by John Irving called the 4th Hand. He wrote the world
according to Garp, cider house rules, and several others. This one is about
a reporter for one of the all news networks that gets nicknamed
disaster man..It is very insightful in view of the news happening right now.
An excellent read by any means.

It's a shortened 1/2 wave vertical. The top half is shortened by the
use of a capacity hat. The bottom part is shortened by folding the
element.

The mic-gain pot doesn't act like an appropriate
audio-taper pot. To improve its function (especially
when the AMC/ALC circuits are bypassed) add a
100 ohm resistor from the input or wiper pin to
ground.

Interesting. I also notice that the music industry is going on a 'fishing' expedition - trying to catch people trying to obtain copywrited songs. Neither the buyer nor seller is exactly sure as to whom he is actually dealing. I just got an e-mail stating they (whomever 'they' may be) have all kinds of warze. Latest operating systems, games, you name it. Just respond to the e-mail if I'm interested. Hmmmm .... wonder if there is another fishing expedition going on. I do read the spam as I like to know what is going on in the world, then hit the delete key. As to the newsgroups, I don't bother with blocking a sender - too many different addys and isps - besides, some of the stuff is so inane it is actually funny.

So there IS a jockstrap. Is it over your mantle as the email says?

> > > provide a valid email addy

> > Here is a valid email addy: voobner@yahoo.com
> > It has always been valid. Send me email. I reply. Valid. Just like
> > Twistedhed@webtv.net

>"Nothing of the sort. It's not your primary paid service. No dice."

You said valid. I provided valid. Now you say primary. If I provide
primary, what will you say next? Notarized? Carbon-dated? Gold-plated?
Oh come on Twist. We're just talking about you sending me a photo of
you holding some mercury-soaked minnow you caught in the
sludge-infested creek by your house. What's the big deal?

>"Of course you taking issue with vernacular useage is mundane. It is
>also trifling. You are correct in one aspect, it does betray you.

Maybe
>you thought it flattered you somehow?"

I was talking about your "affected" writing style. What the hell are
you talking about?

>"I understand. Why watch "Jeopardy" when "Romper Room" serves your
>needs."

I guess words like "utilizing" REALLY wow 'em down at the Feed Store.

TWISTEDHED: "Clem, I aim to *utilize* this here manure on my tomatoes"
CLEM: "Mercy sakes I need me a dictionary jest to talk with this here
fella"
JETHRO: Whoo hoo. That Twistedhed shore is educated with his college
words and all. Whoo dogies"

> >Think of me like the Pope or Bill Clinton. I'm here to try and find a
> >common ground between Ariel Sharon and Yasser Arafat.

>"You always select such poor analogies. Would Kissinger not have been
>more appropriate?"

Kissinger was in Nixon's administration. You remember Nixon, don't
you? No, I'll take the Pope any day. How about you draw up a list of
grievances you feel that Leland is responsible for and he can respond
to them? I'll arbitrate.

> >What would you have Leland do?

>"What would I have him do? Well, I could give him a job as a deck
hand
>baiting fishing hooks.

> >So really, you prefer to keep insulting him, and visa versa?

>"What do you mean...KEEP? I wasn't directing anything to him as he
>continues to keep me as his God and imitate me daily in his email,
>headers, crossposts, etc. You asked me about him, remember? I would
be
>amiss in my manners if I did not reply to a post in such fine form as
>yours."

So you read his posts with care? I thought you didn't. I thought you
could care less about what Leland thinks.

>"You don't get it. I care more about my toe jam than what Lelnad
does.
>He can do or say whatever he wishes. It just doesn't matter to anyone
>except you."

I'm just trying to make sense of it all for you, Twist. You know I
have yours and Lelands best interests at heart. Now above, you said
you don't care what Leland does. So what's the problem?

> >So you don't want peace?

>"I have peace, my friend. I sure don't need Lelnad or you or anyone for
>that. I treat people in kind."

So if Leland leaves you alone you'll agree to operate legal CB and not promote outbanding?

>"I kinda like it just as it is. I told you, I'm here for sh*ts and
>giggles now. I made plenty of friends and radio contacts here. People
>will receive from me what they throw my way. That's not gonna change."

Come now that kind of attitude will get you nowhere. Don't you want Leland to stop reposting that embarrassing post of yours about the jock strap and saucer men?

>If it is upsetting to you, you may suggest that your student protege
>take his loathsome animosity and hostile umbrage to email and spare not
>only you, but the entire group from his stated objectives.

So you want Leland to email you? Will this solve your problem?

>"I told you that you were missing posts.

There are posts missing? Then by all means post the missing posts. Unless they are not missing, In that case you'd be remiss not to miss the missing posts.

>Perhaps I should rant and rave, pretend to blow my top, hurl
>some insults his way..."

How would that be different from what you are doing right now?

>let you lap some female hog blood in the early AM

Er, Twist, that's a little TOO much information. But thank you for sharing.

Wot, you actually paid for a licence ;~)

===
> i can only use it when hes not running his big amp up..
===

Having an amp yourself is not the cure for your problem. The best you could hope for is "payback" by giving him some, and the worst... he reports you.

There may be a way of improving your receiver to stop or reduce the problem... what CB are you running, is it standard (no extra filters), and what area are you in?

Don't get me wrong, I am not preaching, but I would look at what can be done for your receiver. If your only reason for the amp is to blast over a "bleedover" problem, then it is not the cure.
If you still wish to use an amp, then that's your choice... but just be aware that some people will not warn you about inteference... they will report you at the drop of a hat, specially one of the anti-cb Amateurs (there are still a few).

BTW (OT): How good is the "madasafish.com" service... I am looking for a decent ISP, as most uk ISPs are crap.

Regards,

Brainbuster.

Hi Barry.

God this, God that.
As I asked before... What God, Mr "Atheist".

To claim these things about God, yet consider yourself an "Atheist" is total
hypocrisy.
Maybe you already realise that the terms "AntiChrist", or "devil worshiper"
are more fitting of your beliefs... but this label would get you no respect
or credibility.

Brainbuster.

Hello Moparholic: No, no keydown or anything like that.

The AM'er type ah guys where in the store getting the heavy duty guy wire they where putting up a beam the same day we having 80 MPH wind guests. I told them that my old rebuilt Penetrator 500 just got blown over, the mast was now in a L shape, and I was going to replace it with a the new design antenna. And they took my weather warnings to hart and said "Lets go drink beer instead" A wise choice. These guys helped direct traffic after the accident had stopped traffic.

No again. Miss American, the lead suspect now in hand cuff's and in the back of the police car, yelling and cussing. She had no sense of humor at all! She reminded me of Za Za Gabor's, smart mouth, she needed a few swift fresh ones across her face, or something. The by standers even commented what a bitch she was. Probably a good thing for her to realize that not paying attention to your driving is just way to dangerous.

Any way I didn't ask her out, or nor did she invite me to see and meet the family. I can only imagine that she has sent a few good men to their graves from being nagged to death. She said she was going to sue all the police, all the CB'ers, all the by standers, and on and on ect. Much Yak yak, bitch, moan, whine, complain, and stew deleted for the common good.

"Its hard to be humble ...."

Hello SeanH378: Yes I heard a guy down in Ontario, about 40 to 50 miles from me, have one, and he kicked some serious ass with it.

His handle was Box Carrier, and he delivered box's and special delivery mail all day long, on channel 38 LSB. He would say "TNT 12 pack, 2 drivin 8 all day long!"

Kind of funny ah. Now I know what he was talking about, thanks.

From: voobner@yahoo.com (Aaron H. Voobner)
twistedhed@webtv.net (Twistedhed) wrote:
(Aaron H. Voobner) voobner@yahoo.com wrote:
The jock strap? Legend is DOUG sent you that jock strap.

"Hehehe..GE, AA. For whatever reason,
  you somehow feel compelled to share how much you attribute to
Lelnad's words. If you wish to hold him as a legend maker, far be it
from me to change your mind. Besides, it may soothe his ego a bit."

YOU brought up the jockstrap.

"Your compreension deficit appears to be coming in to play here. You
mentioned it. I said lingerie and it appears the first thing that popped
into your mind was testicular wear."

You also said that Leland sent it.

"You made it through this far without a lie, why start now? A great
point though, since what you are you are referring to is Lelnad's
forge."

I wanted to know how you knew. And if you have it, what the return
address on the package said.
Are you saying it might be Leland?

"The strife?

No, the jock. Did he send it?

"What jock? The one Lelnad refers to in his forge where he talks about
his UFO friends? Why not ask him just what it is that excites him so
much about testicular wear. Like I said, you are beginning to care as
much about my thoughts and daily activities as he is. Are you sure you
aren't bucking for Beta female of the litter? I never received anything
but coax from anyone in this group. Besides, Lelnad's monthly check is
tied up paying for newsservers, he couldn't afford to send anything this
far."

Only if you let him be."

Let him be what? There you go, changing the subject.

"I understand it is difficult for you to follow after being used to the
likes of yourself and the other 2 kennel club members, however, with
continued practice you too can be trained to think before you speak."

Do you have any evidence of such? What does the postmark say? When did it show up anyway? Did you show it to the FBI? The Postal Inspectors?

"Um..yea, I gave it to Scully, and he in turn returned it to the saucer men Lelnad speaks of."

So there IS a jockstrap. Is it over your mantle as the email says?

"So how long have you shared this identity crisis and preoccupation with lelnad's obsession concerning jock straps, AA? Is this your knew way of worshiping me?"

provide a valid email addy

Here is a valid email addy: voobner@yahoo.com It has always been valid. Send me email. I reply. Valid. Just like Twistedhed@webtv.net

"Nothing of the sort. It's not your primary paid service. No dice."
You said valid. I provided valid. Now you say primary.

"I clarified."

If I provide primary, what will you say next? Notarized? Carbon-dated? Gold-plated? Oh come on Twist. We're just talking about you sending me a photo of you holding some mercury-soaked minnow you caught in the sludge-infested creek by your house. What's the big deal?

"Better have Sparky show you how to use an Atlas. Between that statement of prose concerning your lack of knowledge of geography and Lelnad's about Carp in Fla., you are losing ground faster than your clubbed foot can find traction."

"Of course you taking issue with vernacular useage is mundane. It is also trifling. You are correct in one aspect, it does betray you. Maybe you thought it flattered you somehow?"
I was talking about your "affected" writing style. What the hell are you talking about?
"I understand. Why watch "Jeopardy" when "Romper Room" serves your needs."

I guess words like "utilizing" REALLY wow 'em down at the Feed Store.
TWISTEDHED: "Clem, I aim to *utilize* this here manure on my tomatoes"

"His name is Caleb."

CLEM: "Mercy sakes I need me a dictionary jest to talk with this here fella"

"Dictionaries are for new learnin' folk. The feed store is old way.'

JETHRO: Whoo hoo. That Twistedhed shore is educated with his college words and all. Whoo dogies"

"HEheehe....ranting a bit, AA? It's ok. I don't mind indulging you. You do have a familiar way of being frustrated. I do like the homage paid to me with the above referenced spelling of "dogies", showing me still have

a sense of humor at times, but I think that's gona piss Doug off. Or was it unintentional and you meant to spel it "Doggies?" Hehe...either way, my influence is abundantly clear with you anfd the "nad man."

Think of me like the Pope or Bill Clinton. I'm here to try and find a common ground between Ariel Sharon and Yasser Arafat.

"You always select such poor analogies. Would Kissinger not have been more appropriate?"

Kissinger was in Nixon's administration. You remember Nixon, don't you? No, I'll take the Pope any day.

"Not me. Kissinger was the best we ever had at foreign affairs. If you were there, you would remember instead of believing what you are told."

How about you draw up a list of grievances you feel that Leland is responsible for and he can respond to them? I'll arbitrate.

"You're asking the wrong person. I don't have any grievances with, Lelnad. He has them with me. I never had a problem handling Lelnad's insults and misbehaviors....or yours for that matter."

What would you have Leland do?

"What would I have him do? Well, I could give him a job as a deck hand baiting fishing hooks.
So really, you prefer to keep insulting him, and visa versa?

"What do you mean...KEEP? I wasn't directing anything to him as he continues to keep me as his God and imitate me daily in his email, headers, crossposts, etc. You asked me about him, remember? I would be amiss in my manners if I did not reply to a post in such fine form as yours."

So you read his posts with care? I thought you didn't. I thought you could care less about what Leland thinks.

"With care? Feeling that trapped and frustrated that the urge to put words in my mouth is too compelling for you to resist?"

"You don't get it. I care more about my toe jam than what Lelnad does. He can do or say whatever he wishes. It just doesn't matter to anyone except you."

I'm just trying to make sense of it all for you, Twist.

"Well, thank you AA. I understand the lack of subsistence in your world, but it would not necessitate me looking to you for anything in life other than a smile."

You know I have yours and Lelands best interests at heart. Now above, you said you don't care what Leland does. So what's the problem?

"Why ask me? Again, I'm not the one that is hung up on him. If I was, I might have used an email such as "KC8LDO@webtv.net.", or call him names when I am responding to a post that has nothing to do with him."

So you don't want peace?

"I have peace, my friend. I sure don't need Lelnad or you or anyone for that. I treat people in kind."

So if Leland leaves you alone you'll agree to operate legal CB and not promote outbanding?

"I kind of grew fond of Lelnad proving me right at every turn."

"I kinda like it just as it is. I told you, I'm here for sh*ts and giggles now. I made plenty of friends and radio contacts here. People will receive from me what they throw my way. That's not gonna change."

Come now that kind of attitude will get you nowhere. Don't you want Leland to stop reposting that embarrassing post of yours about the jock strap and saucer men?

"Actually, his obsessive preoccupation with insults, hostility, and forges have carved his reputation in stone here among us. All groups have one a pariah, Lelnad is ours, well, actually mine. I just permit everyone else to enjoy him also, the sharing type guy that I am."

If it is upsetting to you, you may suggest that your student protege take his loathsome animosity and hostile umbrage to email and spare not only you, but the entire group from his stated objectives.

So you want Leland to email you? Will this solve your problem?

"Are you one of those people that ask the same question several different ways in hopes of getting a different answer? That is a symptom of not being able to handle rejection or not having your own way. Frustration."

"I told you that you were missing posts.
There are posts missing? Then by all means post the missing posts.
Unless they are not missing, In that case you'd be remiss not to miss the missing posts.

"I didn't miss them. You did."

Perhaps I should rant and rave, pretend to blow my top, hurl some insults his way..."

How would that be different from what you are doing right now?

"Perhaps a slight rest, maybe seeing the sun for the first time this year would help you think more clearly. There are numerous ways to regain or stimulate the faculties you appear to have lost."

let you lap some female hog blood in the early AM

Er, Twist, that's a little TOO much information. But thank you for sharing.

"You are quite welcome. Enjoy your day. By the way? Do you want give me shout on the air? I'll even allow you to pick the freq, er,..channel."

-Aaron-

I measure mine by the tingle I feel when I put my finger
on the SO-239. The more tingle, the better it works.

Time to go put a PL-259 back on my coax. Pulled off the
old one to see how bad it was. Not green yet! Pretty
amazing figuring it was on the back bumper, unprotected
for a few years. I have a box of Coax-Seal I plan on using
this time. Got my wire brush and an unmounted mount. Bye.

I wouldn't have a Mercedes. When an American car gets old, it
nickels and dimes you to death. When a Mercedes gets old, it
fifties and hundreds you to death.

BTW, is it illegal to put an American flag on an import vehicle?

tim, mr tra1n is not the least bit interested in your website
featuring ghetto booty....he has much more class than that and does
not have the time to peruse the pics on your porno website of all the
wellfare queens goofing off down on the island displaying their
generous posteriors for the whole world to see, on what has come to be
called kappa weekend or whatever, which in and of itself is nothing
more than a cheap excuse for blacks to gather down on the island and
run around and act cool, but spend no money (because for the most
part), they have none, and stying and profiling.......for whatever the
purpose...you know,.....tim, ...if these people would quit whining
about racism and all of that , and get in the library and start
studying and get their education and go out and get a good job, then ,
then they can go do their crappy kappa weekend thing.. because if you
remember this started out as a weekend fling of college fraternities
and then the hangers on decided to jump into the thing......i tell you
this........there would be a whole lot less folks down there running
around and acting cool, if they had to work to eat.......and that is
my 2 cents......no doubt about it...........

I just wanted to take the time to say thanks everyone for making the World Wide Radio Forum one of the most popular forums dealing with Radio Topics as well as many other interesting subjects.

There are now over 210 members that contribute in making it the best it can be.

Thanks Again.

Hey 257, Ole' Silver Eagle out there in the Carolinas is murder in my recieve up here in Minnesota. Same goes for you too! =D Keep up the good work up there in NH. Talk to ya later and get some ears for my radio up there!

P.S. Did ya get that pic I sent ya a few days ago?

Later,
oneqck76ta@aol.com
http://members.aol.com/oneqck76ta/main.html

You've got "459" out of Minneapolis Minnesota and I'm reading the mail

Is old Joe with the Big radio from Miami? If so i heard him on 34 am this morning ... What a Goof!

<Two-Five-seven@webtv.net> wrote in message news:4542-3C006921-303@storefull-146.iap.bryant.webtv.net...
While browsing around the bells cb radio site I came across a pic of an old beat up mercedes,and lo' and behold it's a pic of the newest vulgarity spewing racist's car......Joe with the the big radio!
Imagine that.Anybody know a salesman or tech that works at Bells that would be willing to give out any personal info on ol' Joe.......Just for entetainment purposes of course.The pic can be seen at www.bellscb.com.Click on antennas then click on 55,then click on 55 installations and scroll down.
Also does anybody know who the other idiot is from the carolinas calling himself silver eagle?Another winner!

just recently aquired an old beat up tuner,one of those monsters thats about half the size of a mack truck. its the "roller-inductor type". just wondering if anybody has any experience with this particular unit. im assuming the 2000 designation makes this a 2kw unit?? also is there anything i need to be aware of when using this tuner?? anything to be carefull of?? its seems to work ok,couple of scratchy spots when im tuning with it. would it be ok to spray it down on the inside with electrical cleaning aerisol like "ditron" or a simular cleaner to help alleviate this problem?? any help/advice/information would be appreciated.

That's correct and you should keep an eye
on it. I had one and my swr jumped due to a
short in the coax and I burned an output transistor.
But overall a good performer, don't overdrive it
and it will work well all day long.

Good antenna's, but man do they
bleed across the spectrum. I remember
this person that lived about 3/4 of a mile
from the College (Local spot for talking
on the radio) Man they we're 3 to 5
channels of bleed over when they talked.

Good Morning SD Jones,
I don't normal take issue with you, as most
of the time I agree, but not this time.
He is asking very valid questions and is
in need of some assistance. He is getting
some very good answers and learning
basics of how to set up a radio, which
is a good thing.

Take Care,
Landshark

Kenneth,
Murch made some good tuners. I'd assume that that '2000' is
it's power handling rating, but I'd play it safe and figure it's
in PEP. It probably wouldn't hurt to pull the cover and give it
a good cleaning. Look for any signs of arcing on the capacitor
plates and on the coil windings. If I rememebr correctly the
inductor 'gear' box is kinda 'kludgy', you might oil it very
lightly. The only thing else I can rememebr is that I always
wished it had a 'by-pass' switch (big deal)...
'Doc

CTE International's clone of the famous Avanti Astro-Plane

Same antenna design as the former Avanti Astro-Plane with structural improvments

Covers 26-30 Mhz

Designed to provide optimum sensitivity for reception, and excellent penetration on transmission

Made of high quality, heavy wall anticorodal Aluminum tube, Stainless Steel, and Shock Proof Nylon

4.5 Db Gain

2000 watt max power

Accepts standard PL-259 connector

5/8s wavelength performance in a compact "folded" design.

Only 11.5' tall

Easy to Assemble

Hope this helps Bert.

Hello Bert: Look at http://www.retrocom.com/index.html

And click on M400 and a assembly diagram will come up for the M400
Starduster and the Astroplane Antennas.

One of the really interesting CB Antennas out there is the Astro Plane
Beam, that was advertised to have a 40 dB Front to back Ratio, and
showed a Azimuth Pattern that did have 40 dB difference from the front
of the antenna as compared to the back of the antenna. The Astro Plane
type antenna was used a driven element, and the Reflector and Director
elements where also driven, probably out of phase as compared to the
driven element, with different lengths of coax, and the straight tubing
Reflector and Director elements where mounted in a insulated assembly.
Very interesting.

Scott69 is incorrect (don't get Mad at me) on the Top Hat capacitive
properties allowing a shorter antenna at the expense of bandwidth. The
Top Hat will add capacitance to the antenna making it look longer, but
will NOT shorten the band width! Measured this too many times, ain't
that neat!

Shorten the antenna and it will shorten the bandwidth.

Jay in the Mojave

I just figured that any reactive part of an antenna would
cause the bandwidth to suffer because the impedance (xL/xC)
would change with frequency.

BTW, the coax that I thought was good, was black when I stripped
it. Pulled the whole run out and replaced it. A job takes longer
under liquid sunshine. Used Belden RG8X gray coax and soldered PL-259's.

We'll have to compare methods sometime...mine worked until I
twisted and pulled it off on purpose after a few years.

AMATEUR RADIO NEWSLINE(tm) REPORT #1267 – NOV. 23, 2001

Amateur Radio Newsline report number 1267 with a release date of
Friday, November 23rd, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. Six meters suprises the world and the night of the meteors are first on this weeks Amateur Radio Newsline report number 1267 coming your way right now.

(Billboard Cart Here)

**

THE BIG 6 METER OPENING

--
Cold Open Audio Here: N6KNW working Japan on 6 meters
--

That’s Brad Marckwardt, N6KNW, in Santa Clarita California working Japan on Saturday November 17th. No big deal you say? Well the band was 6 meters. It was the wrong time of the year for this kind of D-X. And less we forget, while Brad was working Japan, other hams were making equally amazing 6 meter D-X contacts like California to New York and Alaska to the lower 48. Take a listen:

--
Audio Here: Alaska to California, New York to California
--

The 6 meter DX was not limited to North America. Reports came in from around the world of similar single, double and even triple hop F 2 contacts.

From Costa Rica, Carlos Diez, TI5KD, reports that he started out the day working Europeans including GW4VEQ at about 13:50 UTC. Ten hours later, at 23:05 UTC Carlos crossed the Pacific with his signal, contacting JA4MBM for his first ever Costa Rica to Japan short path QSO.

The experts say that that the current solar cycle peaked in 2000 and that we are on the downside. But it appears that someone forgot to tell the VHF and UHF bands that its not time for D-X. It simply keeps rolling in on 6 meters and above and seems to get better and better with each opening.

Our thanks to Dave Booth, KC6WFS, who took time out from working some of the DX to make the recordings you heard in this report. And less we forget, the six meter band is still opening up almost every day – at least as this newscast is being prepared. (ARNewsline (tm))

**

THE ROCKS IN THE SKY: THE LEONID METEORS AND HAM RADIO

As if the 6 meter opening were not enough to bring bragging rights to many V-H-F enthusiasts, a few hours later came the light show in the sky. It was the Leonid Meteor Shower and hams who enjoy bouncing their signals off the ionized trails of meteors were not disappointed. One of them was Joe Hannigan. WL7M in Fritz Creek Alaska heard commenting during another 6 meter F2 opening:

--
Sound here
--

We do not have any of the sounds of the contacts. Much of it is high speed C-W or computerized using WSJT. But we do have some reports courtesy of the VHF Reflector.

Lets start with Sam Horton, KD4ESV of Bradenton Florida. He says that he was operating from grid square E L 87. Horton says that by 18:23 UTC he had worked twelve states including Alaska.

But that’s not all. Tim Marek, K7XC, of Fallon Nevada, operating as a Rover from grid square DM09 had one of the best meteor scatter reports. We don’t have time to cover it all, but here are a few stations that he worked starting with KB5XC in DM65, then AA7A in Arizona, K7MI in grid CN73 and W7USB in DN17. Tim added that W1IPL in grid DN62 went in the log along with K5JL in EM15 at about 03:23 AM local time.

K7XC says that all of these contacts were made mobile on 2 meters. Marek used an Icom IC 706 Mark 2 G transceiver driving a 170 watt power amplifier into a yagi antenna on his rover vehicle. Marek says that he spent the entire night chasing QSO’s on the space borne rocks. He wrote his report at about 6 a-m local time adding that he intended to crawl into bed and planned to sleep till noon. That is, if his pet cat would let him. (ARNewsline(tm))

**

HAM RADIO IN SPACE: HAPPY BIRTHDAY AO-40

The AMSAT Oscar 40 ham radio satellite has celebrated its first year in space. Then called Phase 3 D, the satellite was launched on November 16, 2000 aboard an Ariane 5 booster rocket from Kourou, French Guiana.

Even though the bird suffered some major damage during an orbital transfer maneuver, it has survived. After several months of work by the team at AMSAT Germany, transponder operation started last May 5th. At that time the U-band and L1-band uplinks were connected to the S-2 transmitter passband downlink via the satellites on-board Matrix switch. Since then, hams on Earth have made hundreds of contacts though the satellite.

AO-40 is currently in a long period during in which the Earth eclipses the Sun near perigee. The eclipses actually began about August 28th, and will rapidly increase in length. They will continue well into June 2002. For the current transponder operating schedule visit:

http://www.amsat-dl.org/journal/adlj-p3d.htm (AMSAT-NA)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, and welcoming the Douglas County Amateur Radio Club’s W0UK serving Lawrence, Kansas.

AMERICA AT WAR: FCC GETTYSBURG CHANGES MAIL ADDRESS

We told you it might happen and it has. At least for package deliveries. This, as the FCC’s Gettysburg, Pennsylvania office, announces that it has moved its mail handling facilities off-site.

The reason is the same as reported for FCC in Washington and CQ Magazine. Simply a precaution in case some of the strange people that we all call terrorists decide to target the Gettysburg licensing facility.

Its all fairly simple. Effective immediately, all overnight couriers, United Parcel Service and Federal Express deliveries have to go to a new location. That address is the FCC Gettysburg, Rear entrance, 35 York Street, Gettysburg, PA 17325.

The change does not affect US Postal Service deliveries. At least not yet. They will continue to be accepted at the office's physical address on Fairfield Road and diverted to the off-site mailroom. (FCC)

**

AMERICA AT WAR: VANITY LICENSING ON HOLD

I’m Henry Feinberg, K2SSQ, with late breaking news about the Amateur Radio Vanity Call Sign program which is now, effectively, on hold. This, after the recently announced changes in mail handling procedures at the FCC's Gettysburg, Pennsylvania license processing facility.

As reported, mail directed to the FCC Gettysburg office was being held pending the start of special handling precautions to address any biohazards. Now that ARRL has issued a further bulletin on the matter. It quotes the ARRL’s VEC Manager Bart Jahnke, W9JJ. He says that the FCC has processed vanity applications received through October 14. But says Jhanke, vanity applications received after that date remain on hold for now.

There is some good news. The FCC is tracking the receipt date for each piece of mail. Because the agency gives equal priority to paper and electronic applications, all vanity processing was being suspended until the mail situation is resolved. Once the FCC begins opening its backlog of mail, most applications will probably be processed in about 18 days based on date

received.

But there could still be problems for another group of filers. These are hams who waited till near the end of the two year grace period on renewing ham radio licenses. Jahnke says applications from those filing for renewal near the end of their two-year grace period will only be accepted for processing if they get to the FCC before the grace period expires.

For the Amateur Radio Newsline, I'm Henry Freinberg, K2SSQ. (ARRL Bulletin, FCC)

**

AMERICA AT WAR: THE PSYCHOLOGICAL SIDE OF RADIO

The media is not only reporting the war against terrorism. According to the Media Network e-newsletter, it has also become heavily involved.

Here in the United States, media organizations like NBC were the first to be targeted by those spreading the anthrax virus. And the e-newsletter says that in Afghanistan, silencing the Taliban's voice and putting in a replacement was one of the first aims of the US led military campaign. That plan seems to be succeeding, with the restoration of "normal" radio services in the key city of Mazar-e-Sharif and a few days later in Kabul itself.

In another development, the psychological warfare broadcasts of "Information Radio" have only been heard irregularly on shortwave. Media Network says that it has contacted those responsible for running the operation to find out its current status.

As soon as Media Network get some updated information, it will be posted at http://www.rnw.nl/realradio/features/html/afghanistan010917.html (Media Network)

ENFORCEMENT: FCC VS. RF ELECTRONICS- AN EPILOGUE

The FCC says that it is thanking the owner of R-F Electronics for his decision to stop selling non certified amplifier kits and says that its closing the matter. But the owner of the company does not appear to be ready to say "you're welcome." In fact, Sidney Lee Martin, KD4YBC, is using the World Wide Web to launch a verbal counter attack against the regulatory agency. Amateur Radio Newsline's David Black, KB4KCH, visited the spot in cyberspace and has the rest of the story:

--

Sidney Lee Martin ran afoul of the FCC for allegedly selling illegal power amplifiers for use on amateur HF and 6 meter frequencies. On September 19th, the Commission's Riley Hollingsworth wrote to Martin, telling him to stop the sales -- or face enforcement action.

With the threat of being taken to court and having his amateur radio license put in jeopardy, Martin shut his sales operation down September 25th. And he's

taking a few verbal shots at the Commission.

Accusing the agency of being on a jihad, Martin says the FCC attacked and destroyed his business while letting another company continue selling non-certified amplifier kits. Martin says he will use his former business website to provide updates and comments on his tangle with the Commission. He's urging amateurs to ask questions and learn the truth.

In the meantime, the FCC appears to be closing the matter, at least as far as Martin's business is concerned. In an October first letter to Martin, the FCC's Hollingsworth notes Martin's comments that he has stopped selling non-certified equipment and thanks him for his cooperation.

The letter closes with Hollingsworth saying the Commission will review information Martin supplied about other sources selling non-certified equipment.

From Birmingham Alabama, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

If you are interested in seeing what Martin has to say about the FCC, take your web browser over to http://members.aol.com/rfelectron/rfelect.htm (ARNewsline)

ENFORCEMENT DOWN UNDER: A VERY BUSY ACA

The United States is not the only place where the government has been actively enforcing its radio regulations. So has the Australian Communications Authority -- or ACA. And the figures for the past year are now in and Q-News Graham Kemp, VK4BB, has them:

--

From this years ACA Annual Report we learn that this year, 12 penalties in lieu of prosecution were issued, three are under consideration by the ACA for withdrawal, seven were paid totalling $6,270 Australian, and two went to prosecution. In addition, prosecution proceedings without issuing penalties in lieu were instigated against six other persons for a total of 22 offenses.

During the year, the ACA conducted 1,200 Radiocommunications licence investigations, resulting in the issue of 267 verbal and 557 written warnings. No licence suspensions or cancellation actions were undertaken this year.

The ACA also investigated 781 complaints of interference to Radiocommunications services, and search and rescue authorities were assisted with the location of approximately 104 emergency
position-indicating radio beacons. Although careless handling or faults caused many of these, 21 beacons had been maliciously activated with the intent of disrupting emergency services.

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Be it the United States, Australia or anywhere else, the same words always apply. Don’t do the crime if you cant pay the fine. (Q-News, ACA)

ARRL NEWS: THE BIG PROJECT EXPANDS

Some good news out of Newington. This, with word from the ARRL Schools wishing to take part in the Big Project can contact Jerry Hill, KH6HU at ARRL Headquarters, Field and Education Section, 225 Main St., Newington Connecticut, 06111. You can also find them in cyberspace at www.arrl.org. (ARRL)

**

ARRL NEWS: THE 2001 ARRL DIVISIONAL ELECTIONS

The results are in for the fall 2001 ARRL divisional elections and there are really no big surprises. In the Southeastern Division, Georgia Section Manager Sandy Donahue, W4RU, of Atlanta, Georgia, outpolled West Central Florida Assistant Section Manager Paul Toth, NA4AR, of Seminole, Florida by 478 votes. The final count was Donahue at 2783 and Toth at 2305. Both were contending for the seat being vacated by Vice Director Evelyn Gauzens, W4WYR, who decided not to seek a new term after 22 years of service.

In the Southwestern Division, San Diego Section Manager Tuck Miller, NZ6T, of National City, California, defeated Ned Stearns, AA7A, of Scottsdale, Arizona. The vote was 2485 to 2208. Miller assumes the vice director's position being vacated by Art Goddard, W6XD, who ran unopposed for director.

Last but by no means least, incumbent Pacific Division Vice Director Bob Vallio, W6RGG, of Castro Valley, California garnered 1924 votes to beat back a challenge by Gerald D. Griffin, K6MD, of Pacific Grove, California. Griffin polled 1225 votes. All those elected officially take office on January 1st, 2002. (ARRL)

**

HAM INDUSTRY NEWS: ELECRAFT IMPROVES THE K1

Elecraft's very popular K 1 compact CW transceiver has just became a four-bander. In addition to the 2-band version, the rig is now available with a single band-switched module that covers 40, 30, 20, and either 17 or 15 meters. No hardware or firmware changes are necessary to use the 4-band module and the module can also be ordered as an option to upgrade existing K 1 transceivers. For more information or to order, visit www.elecraft.com or e-mail sales@ elecraft.com. (Elecraft release)

**

COMMUNICATIONS BUSINESS: MORE LAYOFFS AT MOTOROLA

High tech giant Motorola has announced that it is reducing its work force by another 7,000 jobs, including an unspecified number of layoffs. The announcement came a day after the telecommunications giant reported a $1.4 billion loss for the quarter ended September 30.

Faced by a weakened economy and slower industry growth in worldwide cellphone sales, Motorola already this year had announced 32,000 job cuts to a work force that stood at 147,000 last December. That would increase the total cuts to 39,000 and trim the work force to approximately 108,000 by the end of the year - a reduction of about 26 percent. A company spokesperson indicated there could be more. (Published news reports)

**

HAMFESTS AND CONVENTIONS: SUPERFEST 2002

The Amateur Electronic Supply 8th annual Superfest open house is now slated for April 5th and 6th 2002 at the AES store in Milwaukee Wisconsin. According to a note from Molly Schreiber of AES, manufacturer representatives will be on hand displaying their wares and several forums are being scheduled. And as in years past, ham radio clubs are being invited to participate with free display space. Information on this and more is at the AES Superfest website. Its a long URL. Its in cyberspace at /www.aesham.com/superfest/sf.html. (AES Release)

RADIO PUBLICATIONS: DEPARTURE MESSAGE

CW aficionados attention. This one is for you. It’s a new book called Departure Message by Charles Lunsford that tells the story of an enlisted aircrew member flying as an Airborne Radio Operator in the 1950s.

Lunsford’s book traces one of the last of the Radio Operators trained in International Morse Code and who flew in the last aircraft purchased by the United States Air Force which had a Morse key as standard equipment. The book also describes some of the radio and radar aids of the time and the first top-secret transponders for identification.

Departure Message is published on-line by greatunpublished.com and is available in paperback or for download. More information is on the web at greatunpublished.com. (Charles Lunsford)

**

EMERGING TECHNOLOGY: APPLE I-POD

Apple Computer has unveiled a revolutionary new portable music player that can hold an entire music collection. It also takes Apple outside its core computer business for the first time in eight years.

The Apple "i-Pod" is the size and shape of a deck of cards, with a small LCD screen and round dial on a white front and a stainless steel back. It holds

about 1,000 songs in the MP3 music format and has a battery life of 8to 10 hours.

The only negative. The “i-Pod” currently will only work with Apple Macintosh computers, but that may change. About 7 million existing Macintoshes have the necessary hardware and software to be compatible with iPod. Apple president Steve Jobs says the company is considering porting it to windows based machines as well. (Apple release)

**

TECHNOLOGY FAILURE: COMPUTER FAILURE AT THE CALTECH USGS EARTHQUAKE MESSAGING SITE

A 5.1 magnitude earthquake near Anza California on October 30th should have generated an almost-immediate e-mail message to all southern California Seismic Network e-mail subscribers. However, this particular message was delayed about seven hours due to a catastrophic network hardware failure that occurred minutes before the shaker. To subscribe to this free and usually reliable reporting service, see http://pasadena.wr.usgs.gov/latest/mailing_lists.html (CGC Communicator)

**

INTERNATIONAL - FRANCE: ARISS-EUROPE QSL ADDRESS

The ARISS-Europe QSL Bureau's address has changed. Effective immediately, all European requests for ARISS QSL cards are to be addressed to AMSAT - France, 14 bis, rue des Gourlis, 92500 Rueil Malmaison, France.

Those applying for a QSL should include a self addressed envelope and two International Reply Coupons to cover the handling cost. The ARISS-Europe QSL Manager is Christophe Candebat, F1MOJ. His email address is F1MOJ@aol.com. (ON1CAU)

**

INTERNATIONAL - AUSTRALIA: VK 80 METER SSB BAND TO BE EXPANDED

The Australian 80-meter SSB 'DX Window', at present limited to a 4-kHz segment around 3798 kHz, is due to be expanded - but not until 2004. Jeramy Boot, G4NJH, has more:

--

The Australian 80-metre SSB 'DX Window', at present limited to a 4-kHz segment around 3798kHz, is due to be expanded - but not until 2004. In Australia, the band 3700 - 3800kHz is presently allocated to the commercial land mobile service, effectively limiting amateur SSB operation to a single frequency. Following an approach by the Wireless Institute of Australia, the Australian Communications Authority has agreed to proceed with a change in the allocation of the band 3776 - 3800kHz. The ACA's intention is to reallocate this band to the amateur service on a primary basis from the 1st of January 2004. Jeramy Boot, G4NJH.

--

Current commercial users of that spectrum won’t be left out in the cold. They will be moved to existing land mobile spectrum adjacent to the new amateur band by the end of December 2003. (RSGB)

**

SPECIAL EVENTS: K7A PEARL HARBOR DAY STATION

Pearl Harbor Day will be celebrated in the ham radio world December 7, 8 and 9, when Special Events Station K7A comes on the air from Phoenix Arizona. K7A will be operational on most High Frequency bands. More information is posted on www.aztenx.org (Superstition ARC)

**

DX

In-D-X, Jim Weidner, K2JXW, who is the founder and president of the Amateur Radio Lighthouse Society announced the groups second annual Lighthouse Christmas Lights QSO Party. The event is scheduled for December 22nd to the 23rd. For more information please visit www.arlhs.com on the world wide web. (News release)

**

THAT FINAL ITEM: VK HAM RADIO IN THE AIR ON THE AIR

And finally this week, the story of the celebration of an old airplane and the part played by ham radio. It was an unusual job for hams. Again, from Australia, Q-News Graham Kemp, VK4BB:

--

VK4's Redcliffe & Districts Radio Club Inc. ran a radio link, at the request of Redcliffe City Councillor Ian Poyitt, from an aircraft to Redcliffe Radio Station 99.7 FM. The Link commemorated the 70th anniversary of the Tiger Moth. There was approximately 100 old aircraft participating in this rare fly-past.

--
Flight Audio Here
--

A hand held scanner's audio was fed directly into the mixing desk. A 2 meter radio using a quarter wave antenna from the aircraft, then a crossband link to take the 2 meter signal from the aircraft and retransmitted this on 70cm using the clubs new Yaesu FT-847.

The flight went off without a hitch with Steve Harris VK4HRS as the Aeronautical Mobile Announcer, having flown for the first time and enjoyed himself immensely.

--

Well done Steve and all at the Redcliffe Club. (Q-News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address
is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at
Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the Dayton Amateur Radio Association has opened the nominating period for the 2002 Dayton Hamvention Awards. There are three awards presented each year. They are the Radio Amateur of the Year, Special Achievement, and Technical Excellence.

All amateurs Novice through Extra are eligible. Awards are decided by the Awards Committee, based partially upon the information received. Magazine articles, newsletters, newspaper clippings, videos and the like are appreciated but cannot be returned. The deadline for nominations is January 31, 2002. Nominations can be submitted by US Mail to Post Office Box 964, Dayton Ohio 45401 or by completing the convenient e-form on the web at www.hamvention.org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, KC5MFA in New Orleans saying God Bless America, 73, and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2001. All rights reserved.

> Jay in the Mojave
>

Top loading is an ancient and honorable device that if anything widens the
bandwidth.

The daddy of the top loaded antennas is the medium wave or long wave Marconi
with all of the horizontal wires actually being a capacity hat for the 'feed
line' which is in fact the vertical radiator fed against ground with a
tuner. Bandwidth was one of the reasons this was done; try to base load it
and your bandwidth at 400 khz was non-existent. Looks el spiffo in the the
old movies tho.

Back in the 30s a telephone engineer speculated on a single wire top hat fed
off center as a broadband antenna, a variation on feeding a 40 and 20 dipole
off the same feedline. So every off-center doublet to this day is called
(by some) a Windom.

Because the input impedence is pretty well maintained over a full-sized vertical there is no reduction of bandwidth. By providing alternate paths for resonance, it may increase the effective bandwidth.

Jay strikes again!!

Hello Scoot: I had that thought that a Top Hat did narrow the bandwidth, but after going from a mild mannered 1/8" round rod type Tot Hat to a very aggressive Top Hat design, using flat stripe like material, 1/8" thick, 1/2" wide, by 20 inches long, Aluminum Bar Stock, no bandwidth loss was measured. However Eznec shows that if the Top Hat gets to long the the lower angle of radiation will rise a little. So there is a trade off perhaps.

Yeah the coax will throw ya off. I had some that was driven over and flattened that did throw measurement off.

Put a antenna analyzer on a 102 inch S/S whip antenna, and just wrap some copper or aluminum wire around the top of the antenna to make a top hat, say about 5 to 10 inches long, and measure the difference before and after in frequency response and bandwidth.

6650. hazer with electric winch

Newsgroup: rec.radio.cb
Date: 2001-11-25 21:36:46 UTC
From: Kenneth Vaughan <kenneth.vaughan@worldnet.att.net>
Message-ID: <OvdM7.128862$WW.8074768@bgtnsc05-news.ops.worldnet.att.net>
Source record: 105663

just for those who are interested,ive recently installed an electric winch to raise and lower my hazer. the winch was purchased at harbor freight for 69.95. its a 400 lb hoist type winch. it is supplied with plenty of cable. the attachment to the bottom of the tower was simple using the 2 u-shaped clamps supplied with the winch. the only problem encountered was the drag of the hazer aginst the tower rails caused the winch to heat up and stop. i ordered the roller bearing kit for the hazer(allowing the unit to roll effortlessly) rather than drag the rails. once accomplished,the winch performed flawlessly even in high winds.(trust me,we have high winds here in elpaso.) the winch is a worm gear type drive,so the antenna stops and is held securely at what ever position the winch is stopped.
if youve been considering an electric winch for this purpose,id hurry up as the sale on these units is ending soon,and the winch will return to its original price of 119.00. good luck,and good dx-ing!!!

Do they look reasonably well made?

What width is that capacity hat?

What distance between the top of the coil and the capacity hat?

Let me know if you try it.

What do they retail at?

Hello Dick: Very interesting I didn't know all that!

Kind of makes you look at a Discone Antenna.

One other thing that the Top Hat does is reduce atmospheric noise big time. I-10K Prototype users report back a much quieter receive, in the less noise being received especially compared to the Sigma 4, 3/4 wavelength antennas. And a tad stronger received signal level on actual station signals.

These Sigma 4 antennas are 3/4 wavelength, which allows for a easy matching method, a Gamma match is used, and no expensive insulated base assembly has to be made or designed. But a aluminum hoop is used, mounted at the base of the antenna, and extends upwards, to restrict the antennas pattern, so that it will look like a 5/8 wavelength vertical. the 5/8 wavelength does requires a insulated base assembly to hold the vertical element, and a more complex impedance matching device.

The 3/4 wavelength Sigma 4 antennas SWR changes with mast length. What a charm when your trying to install one.

Look at:

http://www.sirioantenne.it/cbba1ing.htm

Then click on Victor 4000 and can see what a Sigma 4 look a like, look s like!

Sure. When are you going to quit playing silly games with the various newsgroups with posting forged messages? If you're not "personally" involved then you know who is.

> More shoot "CBer's in the head,then ask questions later" reasoning.

This is a CB newsgroup, and those rules were well established long before I came along. If you don't like them then do something positive to change them.

Just another example of your un-American attitude Mopar. Your solution to any problem seems to either violate basic American principles, or with violence.

Indeed the Saddles one is a classic, on FILM. You guys just gots no imagination or don't know too many old ladies in waiting. Imagination is why radio worked but various attempts to put characters on film, from the Shadow to Froggy the Gremlin, failed miserably. While I could care less if Gandalf the Gray ever turns white and Frodo can fall down a manhole with my blessings it will still be better in the mind than it ever can be on film.

Many years ago, two General Mills-sponsored shows came out of WXYZ in Detroit produced by a guy named Fran Stryker who for all anyone ever knew was never west of Chicago in his life. He liked to steal his themes from operatic overtures.

Return with us now to those thrilling days of yesteryear, the Lone Ranger rides again! The William Tell overture playing in the background.

On King, on you huskies. Sgt. Preston of the Yukon.

I watched TV come on the air in Omaha in 1949 but on Saturday morning it was still "Plunk your magic twanger Froggie."

And no one will ever do a better porno flick than you can do for yourself.

Hi Phil.
I just pulled out the boxes, 2 golden rod 45,
1 golden rod 90, 2 thunder 8. I do have the
instructions in one box, alas one box was
far from complete. But there is enough to
make one 45 with a few spare parts.
If I can I will try to scan or take a pic
of the instructions and send them to you.
Is this a valid addy?
Does anyone know anything about
the Signal Eng. Thunder 8 antenna, I haven't
taken out of the box, so I'm not sure if
it's a base or mobile antenna.

Landshark

Leland, I say take him up on his offer hell you could own a Collins, a old Mopar, and a lawn fertilizer business, oh almost forgot a vhf radio, the threat has been clearly made... If nothing else If he does nothing you could tweak his balls for the next year or so in the NG like Sparky did when he didn't show up for him.

aw bullshit scott......if somebody brought you a brand new benz and
parked in your driveway and said it was yours, you would jump in it
and ride in a heartbeat.......sounds like a little bit of jealousy to
me......

>73 de Bert
>KC2HMN

Hi Bert,

The current code exam is given at 13 - 15 wpm with the words spaced out to allow the message to qualify as 5 wpm. This is called Farnsworth. It has the advantage of allowing one to increase their speed proficiency with a minimum amount of pain. The "old" 5 wpm Morse test was a true 5 wpm CW test. I'm not exactly sure if the Farnsworth "exam" is meant to circumvent restructuring to a degree, but once you can copy the "sound" of the sent characters at 15 wpm, the spaces in between the words becomes unimportant. So Bert, if you've been practicing at Farnsworth speed, then straight 5 wpm would seem agonizingly slow. However, the "old" General test would feel more appropriate. Hopefully you will encounter 13 wpm Farnsworth. I believe you can request a straight 5 wpm, but I wouldn't count on "that test" being on-site. Take care and 73.

Mark

Oh Jolly, the mast is part of the system. Another one of the 'try to
decouple a 5/8' capers.

A discone is just what the name implies: a disc and a cone. Take an SO-239,
mount a pizza pan on the center pin and a cone on the ground side about the
same length as the diameter of the cone. Will resonate over several octaves
with a semi-decent SWR. People have built them for hf but they are to say
the least bizarre.

A Benz has no real style anymore. However, you missed the important
question, see above for a repeat, Pete.

So you need a kickstart when the automatic starter fails?

Well Scott, it's like this...there are times when a $2 rental beats a $12 bottle of wine and the whole dinner thing. You just have to pick your shots. ;-) Take care and 73.

When you do, tell us! The picture is not all that informative about what is
in that top coil and what the coax is doing there. I admit to being a bit
skeptical about ads that promise 1 to 2 S-units but if you don't mind the
whistle and the 'whatthehell?' looks it might make more sense than a helical
dummy load.

Well it's clear we're not going to get to the bottom of this
jockstrap/UFO affair anytime soon. Why can't you just say "There is
no jockstrap on my wall and I don't talk to saucer men"? That would
put an end to it. Instead you keep changing the subject and avoiding
discussion - and so the jockstrap issue continues to fester in
people's minds like an infected wound.

Also the Leland/Twisted feud. I asked you to put together a list of
your grievances and I would take them to Leland for his review. You

refused. How can I help you when you don't want to help yourself?

Just curious. Why would an unlicensed CBer be advised to "play it
safe" with a 2KW PEP tuner? The legal RF output power for CB is no
where near the tuners rating.

A couple of years ago I had a table at the Memphis keydown and it was right next to Black Al Capone's table. I was drooling over a nice dark silver anodized stick he had there and the wife put her foot down LOUDLY........."You're not putting an antenna that big and ugly on that car". After she realized how loudly she had said what she did.......I left the show with a nice new dark silver Black Al............and the rest is history!

Thanks Jay,

Looks good. I read your other post re.he Sigma. I bought one of these (...actually I think it was a gift.) a long time ago and wasn't too happy with the quality of construction. I was actually afraid to mount it on the house. Whoever bought the house found a new Sigma and, sob...sob, a PDL II in the basement. Both brand new and the PDL II with all the hardware repalaced with stainless steel, right down to the last u-bolt. (S.S. saddles added!) Sniffle...sniffle. Thanks again Jay.

Hey, Guys, Happy numbers here from one of the last still operational CBers in Germany... Well it�s not all that bad as it sounds, but we�re dwindling away very fast over here, even the trucks don�t all have squawks anymore... It�s really a crying shame!!! I�m the last one in my city who still operates, though I�m limited to (illegal...)DX-ing, as in legal range I only catch Static and babyphones... The WWW swallowed us all I�m afraid: no one wants to learn their Q�s anymore
((

So happy numbers to y�all from the Last Man Standing in and around Aachen/Germany!(Boy am I pathetic tonite...)

Thanks,

I have a stack of "old" CB/ham mags and it's fun going through them and checking out the advertisements. I had an old Saliut (CTE?) Sigma 3/4 omni some years back and the quality of construction left much to be desired. (IMHO) So I'm a bit leary (Is that spelled correctly?) of the Italian copies of Avanti/Antenna Specialists designs. I do have an original AS M-400 Starduster still NIB. Perhaps I'll give it to my niece? Thanks for the info and take it

easy.

The TUG-8 is a 4 wire mic and the TUG-9 is a 6 wire configuration allowing for a little better compatibility with more radios. This was also brought about because of all the news radios going to electronic switching rather than relay switching (the older radios that you could hear the relays click in when you keyed them up). This wiring configuration had little to no effect on the working or sound quality of the mic.

Thanks, Train.

Do you have any idea whether or not Astatic still has any parts stock for these? I'm aware that they're doing the "Final" version now, but I asked them for a parts/price list via e-mail a few days ago and never recieved anything back. I don't know if that's because of the holidays or because they have no parts now. I've got a T-UG9 D-104 about 30 years old. It's in pretty good shape overall, but does need a couple of parts and screws replaced. Thanks again.

6725. Joke: The free ride is over...

Newsgroup: rec.radio.cb
Date: 2001-11-26 06:20:04 UTC
From: "Scott (Unit-69)" <upplus@hotSPAMmail.com>
Message-ID: <3C01DF01.B6F2D209@hotSPAMmail.com>
Source record: 105787

It was many years ago since the embarrassing day when a young woman,
with a baby in her arms, entered his butcher shop and confronted him with
the news that the baby was his and asked what was he going to do about it?

Finally, he offered to provide her with free meat until the boy was 16 years old.
She agreed.

The butcher had been counting the years off on his calendar, when one day the
boy who had been collecting the meat each week, came into the shop and said,
"I'll be 16 tomorrow!"

"I know, I know," said the butcher with a smile. "I've been counting too!"
"Now tell your mother, when you take this parcel of meat home, that it is the LAST
free meat she'll get from me... and watch the expression on her face!"

When the boy arrived home he told his mother what the butcher had said.
The woman nodded and said, "Son, go back to the butcher and tell him I've also had
free bread, free milk, and free groceries for the last 16 years...
and watch the expression on HIS face!"

(Thanks LS)

You can pick these up for 5 and 10 dollars at hamfests and
flea markets. Buy five or six and make 3 good ones.

you know, tim.....i think you should go pick that thing up and bring
it back to texas.......just think about it......you could throw some
alts on there, put some transformers in , load that 4 jugger in the
back, drive over the causeway and you could be king of the
island......but come back to the mainland, the shit hits the fan,
cause yous bes in jones territory then homes,........no doubt about
it......

Donnie, Dayveed and all the other 20m wanabees
ae doing amateur radio a GREAT SERVICE by making
14.313 mHz USB into a gigantic asshole magnet.
The rest of the ham bands will be clear and all of the
bootleggers, morons. malcontents, shitstains and
boneheads will camp out on 14.313 Every town and
city needs it's red-light district you know! A place where
the lower caste among us can be relagated to a place
of depravity all their own, while leaving the rest of the
world managed by rational thinking individuals. Radio Freq's
are no different. 14.313 is ham radio's white trash trailer park
full of more imbred and deformed children than a gibsonton fla
trailer park...

the best way to do it is figure on about 25% less than rated (claimed)
output. the 100's SHOULD do about 75-80 watts and the 150 a little over 120.

6744. Aaron/Lelnad vs. ?

Newsgroup: rec.radio.cb
Date: 2001-11-26 15:17:55 UTC
From: twistedhed@webtv.net
Message-ID: <4186-3C025D23-90@storefull-124.iap.bryant.webtv.net>
Source record: 105707

SDSpecialDeliveryJones wrote:
hey twist why don't you have a sitdown with ole aarionis and see what it is that she wants.....as far as this ceasefire is concerned.....?????
--

"You noticed that too? She has been becoming a bit unwrapped, at times struggling for dialogue, unable to maintain a single conversation topic. Couple that with the artificial and deceptive statements she makes, recites, and believes, and one can see why the generic makers of Ritalin is a great stock choice for investment.
We know what Lelnad's wishes are and who he wants to be. Maybe AA wants to be a man also, which is why they share so much in common."

6745. Re: Twistedhed vs Leland

Newsgroup: rec.radio.cb
Date: 2001-11-26 15:33:16 UTC
From: twistedhed@webtv.net
Message-ID: <4184-3C0260BC-637@storefull-124.iap.bryant.webtv.net>
Source record: 105706

Aaron surmised with:
Well it's clear we're not going to get to the bottom of this
jockstrap/UFO affair anytime soon.

"Oh, don't stop on my account. Feel free to discuss your unusual fetish
and Lelnad's patterned habit of mentioning the word "sniff" and men's
testicular wear simultaneously when discussing violation of part 95 of
the cb code of ethics and rules. Given both your fondnesses for the
topic, it doesn't take a psychiatrist to surmise that a consistent train
of thought with such apparel indicates a deeper, confused disturbance
within the psyche, of an underdevleoped sexual nature. While we all do
not share the scars you two seem to carry, it is therepeutic that the
two of you have bonded. Your reaching out to me is genuinely touching,
but you must understand, it's not that I CAN'T help you few, it's just
that I choose not too. Do understand."

Why can't you just say "There is no jockstrap on my wall and I don't
talk to saucer men"? That would put an end to it. Instead you keep
changing the subject and avoiding discussion - and so the jockstrap
issue continues to fester in people's minds like an infected wound.
Also the Leland/Twisted feud. I asked you to put together a list of your
grievances and I would take them to Leland for his review. You refused.
How can I help you when you don't want to help yourself?
-Aaron-

I've driven the 600 and it's a really nice ride. You won't find much room under the hood after Benz shoehorned the V-12 into it though. You might want to go for the 600 sedan as it affords a little more trunk space for batteries.
Keep in mind that just small things like a new power steering pump on an SL600 will set you back $2100 installed!

6764. What CB should I buy?

Newsgroup: rec.radio.cb
Date: 2001-11-26 21:50:06 UTC
From: Michael Martin <sparky@engineer.com>
Message-ID: <u05e5874rht6fc@corp.supernews.com>
Source record: 105727

I want to get a CB radio for my pickup. I bought a little hand held unit for a trip to Florida and as I am sure you guys know it sucked. The user manual suggested an external antenna for vehicle use, but I thought the thing should at least be able to reach a truck right beside me.

Well if I need a fixed antenna the portable unit doesn't make sense so I guess I will get one that mounts in the dash. I see a lot of radios for a lot of prices. I just want one for traffic reports on the road ahead and maybe some bs'ing.

Which low end or mid level radio would you guys recommend?

6765. Re: What CB should I buy?

I guess I need antenna recomendations too. Where is the best place on the
web to order CB radios. I live in the middle of nowhere.

Thanks again.

They do not show or mention the GoldenRod 90 on their site.

Tell me more?

I imagine it's 90" tall and so therefore nearly a full 1/4 wave?

Coil?

Hat?

Phil / UK

Check the output with a watt meter or open the amps up and see what transistors are used. Then look up the output power on the datasheet.

For example, If the transistors are 60 watts each in a push pull configuration the theoretically output power is 120 watts but do to insertion losses in the matching transformers and other losses. The output power will be around 100 watts. Most of the 12 volt amps use 50, 60 ,70, 80, or 100 watts bipolar transistors.

I would get the Cobra 25LTD, they don't get much better for the money.
When you're ready for a little audio boost install a Motorola 2SC1957 Driver
and a
2SC1969 Final Transistor. Use a Uniden microphone with 500 ohms Impedance,
have the antenna tuned using a MFJ analyzer. If ya got the room spend $20.oo
at R/S
on a 9' whip, mount it centered on the rear bumper, Good Luck.....

Twithed Went up to Jersey----to the tune of "The devil went down to
Georgia"

Twithed fag went up to Jersey
She was lookin for a cock to suck
At every truckstop in the southland
She'd plum run outta luck

Then she came across this faggot slurpin on a pekker
And suckin' it hot
So twithed jumped up on another fags cock
And said "Queer let me tellya what..."

"You suck pretty good dick my boy, but give my gay ass it's due..."
"I'll bet a gold dildo against your asshole..."
"cuz I think I'm better that you!"

The fag said "My name is trainedpuppet, and I've sucked dick since age
ten"
"I'll take your bet, it aint no sweat...cuz I'm the queerest ever
been!"

CHORUS
Trainfag put on your lipstick and get your weiner hard
Cuz twithed's in from F-L-A, that fucking gay retard
And if you win you get a shiny dildo made of gold
But if you lose twithed pumps asshole!

MUSICAL BRIDGE-SOUNDS OF COCKS BEING SUCKED BY FAGGOT KEYCLOWNS

Twithed opened her overnite case and took out a pink nightgown
She said "I'll dress up just right, as a faggot assed keyclown."
Then she pulled her 1 inch pecker out and the keyclowns moaned with
lust

Landcarp and moped joined right in and the faggot sounds were thus...

MUSICAL BRIDGE-SOUNDS OF COCKS BEING SUCKED BY FAGGOT KEYCLOWNS

When twithed fisnished trainedpuppet said "You're a pretty decent fag"
"But sit yer ass down right there, and I'll suck dick 'til I gag!"

MUSICAL BRIDGE-SOUNDS OF COCKS BEING SUCKED BY FAGGOT KEYCLOWNS

Twithed bowed his head, he knew he'd been outclassed
Then he stuck that golden dildo all the way up trainfag's ass

Trainfag moaned "Twithed just come on back if you ever wanna try
again"
"It gets boring 'round here just having sex with dogs and the same old
men"

MUSICAL BRIDGE-SOUNDS OF COCKS BEING SUCKED BY FAGGOT KEYCLOWNS

THE END

A mid 80's American car will only cost $60 and some hours of
work to replace the muffler and tailpipe and a few missing
hangers and loose bolts.

i think if somebody used something like that, they would have to have
a seperate engine for it.......to pull 50 horses off the
engine,......well you are talking about 35,000 watts or so....and you
might just break something if it didn't like that kind of sudden
load.......that is what i hate about ac....it is damn hard on the
engine.....

Because the massive amount of power from a mobile Ac amp ... the highest voltage on the antenna is at the tip of the antenna ....with enough power a corona will form off the top of the antenna.. any sharp edges are a no no. thats why you need a ball or other smooth object.... Not necessarily a capacitance Hat...come on.. breaker breaker...

aw geez tim.....having trouble with those pesky neighbors huh????
imagine that......shame on them for wanting to watch tv at night...oh
well......i tell ya what.....old mr jones says that is best damn
idea you have had yet tim.....yeh....pump up that 66 ford galaxy old
buddy and you will fit right in. yeh a few bees, a few bitches , a
little crack, some bud, and what?? oh, a few kw's to what???? oh shut
down my radio.....you know something tim??? my watch is telling me
it is time for you to get another jones radio
asswhipping.....what???? yeh that radio with all that water behind
your back ain't going to be heard anywhere in the 4 county
area.....and that my friend is how the cow eats the cabbage.....i am
the big man in houston.....no doubt about it.....now

then.....on the help part.....why should i help you if plan on trying to kick my radio ass????? besides what's in it for me????...maybe you can slide me a couple of those cute black bitches for few hours while mr big ten inch from houston takes care of beeswax.....

> technical explanation will suffice.............

Damned if I see any direct connection but if the object of running AC is to
run some megawattage then keeping the antenna tip from burning off in a fit

of corona is probably as good an explanation as any.

It is said that the quad antenna was invented at HCJB in Quito, Equador because the tips of the yagis kept burning off. Apparently the chief felt it was sensible to bring a Coleman lantern to read his newspaper with rather than read by an antenna he was going to have to fix the next day.

The voltages at the tip of an antenna under high power can get to be pretty phenomenal.

Doesn't matter who I sell it to. It's not illegal to sell, only to
operate on 11m. What you do with it is only your business, not mine or
Aaron's.

I have finally figured it out. It is the fact that CB is in the HF band. As a HAM, I have to learn code to do DX in HF. But you dont have that rule if you dont have a license. CB and Freeband is free to use with little enforcement. I can see how there would be some haters out there in the HAM community. Especially if you are a tech that is too dumb to pass the morse code test. No wonder there are so many techs in this CB group hastling everyone.

Free HF....No Code, same DX.

All of you whiney techs should just go get 6 meter ssb radios, and leave CBers alone. When its a big enough cause enforcment will step in. By the way, watch your speed limit on those long trips. Those who throw stones may get hit for a mile over the speed limit....Aaron, have you ever went over the speed limit?

Phineas

Little boy you must have me confused with someone else.Do you see me out here waisting my time replying to 4th gade trolls like this one?Move along young un'.
Besides what would I be crying about? Silver Eagle or Joe haven't interrupted me a single time,not once,ever.
You can waist you're time replying to me if you want......it will go unanswered.
And by the way please don't send me email....thanks for you're cooperation.
Have a good Holiday season my friend.
Take care.

The manufacturers rate there transistors at a nominal 12 volts dc. Hence 12
volt amps. Since power supplies and automobiles, with engines running, are
at 13.8 volts. To make you happy. Its 13.8 volts dc. That's direct current
not the District of Columbia!

6824. FOR SALE - AS IS

Newsgroup: rec.radio.cb
Date: 2001-11-27 07:43:32 UTC
From: Lou <tech@dp.net>
Message-ID: <9tvh8e$124a$1@news.dp.net>
Source record: 105837

FOR SALE

Some older CB sets - 23 and 40 channels. AM, AM/SSB, Base, Mobile. Some may be working ok, some may need tuned. Some may not be working properly, but not "dead". Some may be dead. I'm offering these cheap to clear out my inventory. IF you're into playing, need parts, whatever, here ya go. Some if not all of these were taken in on trades for other gear and or left and never reclaimed. IF you're looking for something, ask. I'll try to give you the best price possible. Shipping will most likely eat most of the cost.

Also have some other items available - like crystals for older sets - new and used. Can check before shipping to make sure of "activity/frequency response". Most are the small plug in or solder in jobs. Not model or brand specific. Non returnable.

Pair of Walkie Talkies. Actually new, but "shelf" demo units. I believe them to have at least most of the items if not all that came with them, still there.
2 watt - 3 channel. One channel installed. Need only AA cells to operate. Good for hunting. $60 shipped.

Looking for something? ASK ! I may have it.......

MOST items are sold AS IS even if new.

Postal MOs only accepted. Most items shipped same day or within 24 hours.

yep. 1 of our stores early last year told me they weregetting rid of their stock.I thought the manager was just beinga prick. Like usual. He was always rude. Most RS around here don't sell any parts anymore. Two days ago I went in to get a replacement on a defective item. The guy thought he was smart and shit. He types the item in the computer and says. Nope it is discontinued. "You must of bought it years ago". I told him I bought it about 3 months ago. He still didn't know what this crappy item was. He says. What is a discone. I said, a Dumb antenna that only works on some frequencies well. My 2 meter 5/8's works better on low vhf and so on. but uhf is a diff story. I am glad my electronic wholesaler is still selling electronic parts.

I used to have an Astro Beam. The director and reflector elements are
NOT driven, but they are electrically isolated from the boom. The side
and back rejection of this antenna were awesome. I could drop the signal
of a guy 6 doors down so low that a guy 5 miles away could walk on him.
In fact if I unplugged the coax from the radio, his signal would
increase over what the beam was rejecting.

This was by far the best 3 element designed antenna I've seen. The only
drawback was that you couldn't run it horizontally. A great antenna for
someone who wants the rejection, but doesn't have the room to run long
john 5 elements.

But the Astro Beam WAS different. The AB has much better back rejection
than a "standard" 3 element. I owned 2 3 element beams before I had the
AB, and the difference is worth noting.

Antennas do not "bleed", Radios bleed. Antennas only take the signal fed to it, and radiate it.

Some antenna's radiation patterns allow the RF to enter nearby homes, and exacerbate TVI problems. Some antennas exhibit bandwidth characteristics that allow the harmonics already generated from a dirty radio, to be more easily radiated. But the underlying cause, in most cases, is the radio itself. Adjacent channel splatter, is most likely caused by a screwdriver tech "clipping" the mod limiter.

Icoms generally have better receivers (Except for their noise blankers
Yuck!). But for that all-important AM capability, Icoms fall short. They
tend to be a bit mushy, and a little tricky to set to sound decent.
Definitely not a radio for the "loud and proud" types. Yaesu still has
the best sounding AM of all the typical HF ham rigs.

I never said I had the amps... I just asked what the output was on those three amps. If you're the one that replied, telling me about hooking them up to a watt meter, then you jumped to a conclusion. Do you really think I'm that stupid that I wouldn't have thought to hook them up to a watt meter if I had them? I know I am in NJ, and the pollution can affect my brain functions, but I'm not that far gone yet!

Dave,
You can run the Astro Beam in horizontally, there was a guy here in town at one time that did. I know cause I helped put the things up. He stacked two of them. By using a homemade stacking kit and two of them it will work. They also talked darn good. He got the idea from another guy that had a stacked set of PDL's, hence keeping up with him he stacked his astro beams. He lost vertical but man was it something to see.
Eric

channels of bleed over when they talked.

--
Antennas do not "bleed",

"This was touched on over the summer. Some antennas are certainly
capable of more "bleed" characteristics than others."

Radios bleed. Antennas only take the signal fed to it, and radiate it.

"Some radiate more bleed than others."

Some antenna's radiation patterns allow the RF to enter nearby homes,
and exacerbate TVI problems.

"That would fall under the term "bleed."

Some antennas exhibit bandwidth characteristics that allow the harmonics
already generated from a dirty radio, to be more easily radiated.

"Some more than others. We still call it bleed."

But the underlying cause, in most cases, is the radio itself.

"Agreed. But some antennas can and do bleed more than others. A
fiberglass stick is more likeley to bleed than an aluminum constructed
antenna. I've seen it time and time again."

Adjacent channel splatter, is most likely caused by a screwdriver tech
"clipping" the mod limiter.

"Or an abundance of RF output. Or a transmitter in extremely close
proximity to the receiver causing sensitivity overload. Or it can be
from a sunbaked, weather worn, inefficient fiberglass bleed stick. "

"

Sorry Dave,
While what you say is basically true, that is
not the case here. We then switched antenna
to a Saturn 5, raised it up another 10', added
a ground to both the antenna and radio. The radio
was a Cobra 2000 stock using a Silver Eagle
as the mic. Now after the changes he was a
lot cleaner, with little or no splatter.
Now as it has been said before, there are
antennas that exhibit more characteristics to
bleed than others, so the theory that only
radio's bleed is not all that true.

Take care,

Landshark

And a good one it is, too.

Join me in a bit of a thought experiment. Put on your tutu and pretend to be an electron at the feedpoint when the first cycle of r.f. comes up the feedline. You feel that kick in the butt and move down the antenna - not hard to do as there is not much opposition to your movement. Being first off the feedpoint, you reach the end and set up shop repelling your fellow electrons. As more arrive nearby the repelling force builds and pretty soon the r.f. push is not enough to drive any more to the tip and the antenna rod begins to fill like a sewer pipe fills with BBs. If the antenna is 'resonant' the rod is filled as far as it can be right at the point the r.f. reverses. As the peak is reached and goes back the other way electrons begin to flow out until the next reversal. Let us leave things resonant for the nonce and make the antenna rod a quarter-wave. Dipoles may be easier to visualize.

Because not every electron that leaves the feedpoint makes it to the tip, current decreases more or less linearly from the feedpoint to the tip. Because the static charge or repulsion is greatest at the tip, voltage decreases from the tip to the feedpoint. The tip of any antenna is the voltage node! Current nodes are a quarter-wave away. Both repeat at half-wave intervals on an antenna or a mismatched feedline.

Radiation resistance therefore is at a minimum at a current node and a maximum at a voltage node. R=E/I. This comes in handy when it is not a great idea to feed an antenna at exactly a current node. So you see the Gamma match that simply slides out along a resonant element until it finds a 50 ohm load. Variations on this abound depending on what sort of feedline and antenna one is working with. Beams typically have about a 20 ohm radiation resistance at the centerpoint so that is why you see gammas almost universally. It is called a gamma because the Greek capital letter looks like a gallows and so does a gamma match. Feed it thru a balun and you have to match both sides, a T-match -- nothing magic.

If, for whatever reason, you have to end-feed a resonant half-wave you have a different matching process. This is the standard problem in a dirigible so the end-fed half wave is called a Zepp. Again the tip is a voltage node and being a half-wave away you are looking at another one, on the order of 1500-2000 ohms. There are any number of cute ways to do this as well.

Make any sense??

Sounds like one hell of a case of rf feedback with AP for whatever reason.
Not entirely sure you gave it a fair shake. That's why you only change one
thing at a time.

Dave, for once in his life Twistedhed is right, although he may not
understand why. CBers use one term - "bleed" - to describe a wide
range of different effects - interference, QRM, splatter, intermod,
TVI, RFI, spurious radiation, audio distortion, etc. etc. etc.

Don't argue with me, argue with the FCC. They created this
legislation in order to make it more difficult for CBers to purchase
and use RF amplifiers. Why? Because amps are illegal to use on CB.
Makes sense.

Find yourself a slightly used Cobra 25 ltd or Uniden PC66 `on eBay. If new
is required, the radios remain the same. For something just while traveling
get something along the line of a L'il Wil or if you plan on talking on it
all the time, a Wilson 1000 or K-40 will work well for you.

Technically, DXing on the legal 40 carries the same penalties. Read Part 95.

But *practically* speaking, "skip talking" on the legal 40 has never been cited in any complaint to the FCC that I know of.

The problem is that CB'ers misinterpret this lack of enforcement in this ONE AREA as a signal that "anything goes".

They use it as their prime excuse to take over frequencies that don't belong to them and run excessive power. (As if the fact that you don't get busted for going 70 mph in a 65 mph zone entitles you to go 150 mph on the wrong side of the road)

Like Twistedhed. He shoots skip with an "export radio" on "freeband" -- yet, for purposes of this argument, he tries to include himself among the 5 watt radio users DXing IN the legal 40 channels. Nice try tho....

I'm not arguing. I was just wondering if using an amp on 12 or 10 meters is illegal? Apparently it is, according to the snippit you posted.

Another newby question. If I get a Cobra 25 and a Whip antenna how do I set the SWR? The only thing close to a CB shop around here is a Radio Shack and a Truck Stop. They might have a SWR meter I could use to check my system. Do I have to get an adjustable length antenna or can I just slap any radio and antenna together and call it good enough?

I can help with the vfo to start... It's made to go on a common 23 channel type CB to extend its operational frequency in receive. Yes, though not legal, transmit operation is possible through the vfo.

I have the Siltronix 90 vfo paperwork scaned and available, just Email me direct (remove the nospamplease) and I'll email a copy of it to you.

cheers

Oh boy. I sense a bunch of theoretical scenarios and technicalities
coming.

Look. This is rec.radio.cb The subject of this NG is CB. As it
applies to CB, the use of external RF amps is illegal. The FCC even
took steps to deter the sale of such RF amplifiers to CBers:

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or
lease, offer for sale or lease (including advertising for sale or
lease), or
import, ship, or distribute for the purpose of selling or leasing or
offering
for sale or lease, any external radio frequency amplifier or amplifier
kit
capable of operation on any frequency or frequencies between 24 and 35
MHz.

You can pose all the theoretical scenarios you want (hams building
their own amps, HRO selling used Ameritrons, swap meet sales, etc.)
but the fact still remains, the FCC does not want CBers to use
external RF amps. So why seek to undermine the law with justifications
of why and how a CB'er might use some technical loophole to possess
such an amp?

You need to use an antenna that is specifically designed for CB and I would recommend you get a decent antenna. Radio Shack does sell a vswr meter. You will also need a short patch cord or male to male adapter to connect the vswr meter. Check your vswr at the desired channel say ch 20. If it's high you will need to adjust the antenna. Adjust the antenna as describe in the information sheet that comes with the antenna. Different manufacturers design their antennas to be adjusted in different way. The most common way is loosing up a setscrew and sliding the whip in or out of base assembly. Others use adjustable rings or thumbscrews to adjust the antenna. A full 1/4 wave antenna doesn't need its length adjusted but due to its size they can be real bear to mount on a vehicle. However, if you can do it and want maximum performance. A 1/4 wave whip is the why to go.

I beg your pardon. US law says it is a federal crime to import this
device. It is illegal in USA to manufacture, posess, sell, or offer
for sale.

Hi Jay,

You may be right about the quality issues vis a vis Yaesu/Kenwood/Icom, but I have had really good equipment from all of them. I don't have a real preference, tho---I mainly buy what will
do the job most effectively. I am a bit shy of the FT100 line, but won't hesitate to buy a Kenwood
TS440, 450, or TS50 having had good results with them. Actually, I almost bought an FT100
in 2000, but I discovered at the last minute that this line won't meet NTIA standards, so I bought
another IC706. I already had an original 706 that has done excellently both in Amateur and in
FEMA and military service, so it was right back to the Icom dealer. Hehe. The only thing is, I
don't use mine for CB (I listen sometimes, but don't tell Aaron, or he'll go on a rant again. LOL!)
Still, another radio I like is the TS50, which was my first "mini" HF rig. They seem to be rugged,
reliable, and pack a pretty good signal. All in all, I do agree with you that most of the Amateur
rigs are better in many ways than the CB rigs now available, although I am not too fond of them being used in CB service---mainly because of the temptation to wander onto illegal frequencies or
to bootleg on the ham bands.

> illegal? Apparently it is, according to the snippit you posted.

This is a can of worms I am not totally sure about and is a bit academic anyway because the use of amps on 10 and 12 is mildly stupid to begin with and not all that common.

My take is this:

1. The manufacturer of a unit that can amplify 24-35 MHz is in deep doo doo. So is anyone offering for sale.

2. Should an amateur own an amp for other bands given that it requires 50 watts of drive, modifying it or providing the kit to do it is perfectly legal. It is amazing how few of these kits actually change hands.

3. If I build or mysteriously acquire one of these pieces of crap that pass for amps on CB, so long as I am willing to take responsibility for it, no hoo hoo. Selling it might prove to be a problem even to another amateur licensed for the freqs.

There is a concept in the regs that goes back to broadcast rules of the 30s. There are station licensees, licensed operators, and users. Even in broadcast, the operator is something of a dead letter but the concept lives on.

My station is actually N&#65533;BK, not me. I am a station licensee, a CBer is
not.

I am an Extra Class operator. A CBer is not an operator at all. In days of old I was also a First Phone and Second Tel operator.

An airplane pilot is a user but generally also has the worlds least privleged operator license. Same with a pleasure boat. So long as you do not go overseas, no one including the FCC cares.

So some of the fog lifts when it is realized that a CBer is a user and does his thing within a limited grant of authority from the FCC including equipment blessed for this use. Doing anything outside the grant is

operating without a license, pure and simple, which is itself a violation of the Communications Act. An amateur is both a station licensee and also a licensed operator which gives both a lot more privlege but also the responsibility that goes with it.

As noted, this is not always the case in the real world but that is the intent.

Take the damned code test already!

Dick N&#65533;BK

> ==========

He could say that. Or he would admit he was bootlegging on some of the Ham HF bands when 11m was dead. Oh, by the way the rig he was using was modified Yaesu FT-840 with a crappy Turner Mic. He even had a web site with pictures, and bragging about his adventures on the bands.

> You gotta admit, it is a good question.

The better question is how often did he play on the Ham bands. All he needed was a simple dipole cut for his favorite Ham band, and a quick spin of the VFO knob to be in business. And if I recall there was another poster who was reasonable sure they caught him on 20m phone once.

>such an amp?

In other words, Aaron, you don't know. From what you've posted, any amplifier that works on either 12 or 10 meters is illegal. If I remember correctly, there's a number of ham amps floating around that work from 160 - 10 meters, am I not correct? I guess it's gospel then, since you said it. I don't think anything's been said in this thread about "why and how a CB'er might use some technical loophole to possess such an amp".

>this????

Which is illegal?

>> P166 laptop
>> Sony Playstion 2
>> 800watt UPS system

If you're refering to the amp, an HF amp is not illegal. Lots of hams use them all the time on various ham bands from 160 - 10m (although we recently found out from Aaron that using an amp on 12 or 10 meters is illegal).

They've been saying that CB is on the decline for 30 years. Check with the truck drivers and see how many don't use the CB. You won't find many. While it's true that a lot of the "locals" aren't found on the radio in many places anymore, you have to look at certian parts of the country, like TN - Nashville area, where I'd say about 80% of the vehicles driving down the road have a CB antenna on 'em. Then you have the "Freeband", where you can find no shortage of "CBers" when the band's opened.

>In other words, Aaron, you don't know.

Uh uh. I know everything. But in matters of radio law, I defer to the
FCC. Please read the following very carefully:

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or
lease, offer for sale or lease (including advertising for sale or
lease), or
import, ship, or distribute for the purpose of selling or leasing or
offering
for sale or lease, any external radio frequency amplifier or amplifier
kit
capable of operation on any frequency or frequencies between 24 and 35
MHz.

Any questions? Please refer to FCC Part 95 or write to info@fcc.gov

>From what you've posted, any amplifier that works on either 12
>or 10 meters is illegal.

LOL. I didn't say that. What I DID say was.....

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or
lease, offer for sale or lease (including advertising for sale or
lease), or
import, ship, or distribute for the purpose of selling or leasing or
offering
for sale or lease, any external radio frequency amplifier or amplifier
kit
capable of operation on any frequency or frequencies between 24 and 35
MHz.

>I don't think anything's been said in this thread about
>"why and how a CB'er might use some technical loophole to
>possess such an amp".

Wait.

> KC2HMN

Gosh, this is so unspecific and vague, huh?

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or lease, offer for sale or lease (including advertising for
sale or lease), or import, ship, or distribute for the purpose of
selling or leasing or offering for sale or lease, any external
radio frequency amplifier or amplifier kit capable of operation
on any frequency or frequencies between 24 and 35 MHz.

What do you think, Bert? Give us your opinion. Do you think it means
"using an amp on 10 or 12 meters is illegal"?

Well Andy I�m the one who replied about hooking them up to a wattmeter. I misinterpret your original question as did so many other people. 30 plus posts! As you stated in a earlier post I quote "Actually, my original post was about *3* different amps, but I never DID get a response about all 3. Seems people can't read beyond the first model number. Not sure why"

Here's one reason why. One of the problems with using text to communicate unless you're very concise at what you are stating misinterpretation can result and that's what happen here. Your question was "I was wondering if anyone could tell me the max output on a Palomar TX-150, TX-100 and the Palomar 100." This statement can be interpreted in different ways. I interpret the question as if you were evaluating these amplifiers and were trying to determine if you were achieving the proper power output. Perhaps your original question should have been written something like this. I'm interested in purchasing or obtaining the following amplifiers a Palomar TX-100, TX-150 and a Palomar 100. Can anyone tell me the max output of these amplifiers? Wording it this way leaves no doubt that first you do not have them and second you want to know the maximum output power.

"Do you really think I'm that stupid that I wouldn't have thought to hook them up to a watt meter if I had
them?"

That thought never even enter my mind and I never stated that you were stupid. I was just trying to help you. Just like many of the others.

> was it something to see.

I knew after I made that comment, that someone would tell me that it's
been done. I guess, I should've said that running it horizontally was
not as easy as just flipping the elements horizontally, and clamping it
to the mast. It would require a horizontal boom mast and the best way to
balance it would be to add a second antenna on the opposite side of the
mast and stack it. It would be an ugly monster that would sure present a
heck of a wind load, but I guess it would work ok.

I tend to like easy solutions rather than trying to kludge up something
that isn't really designed for the application. Rather than trying to
force an Astro Beam to run horizontally, I'd opt for a beam designed to
be mounted that way.
I knew a guy that ran an Astro beam vertically, and mounted a regular 3
element beam horizontally about 6 feet below the "ring" of the Astro
beam. That worked well, and wasn't too hard to craft.

>
> "That would fall under the term "bleed."

Not in the context that Landshark originally refered to. I try not to
use the term "bleed" to cover the various forms of spurious emissions
that are all caused by different things. TVI and splatter are not the
same animal, although one may exacerbate the other.

Landshark described, what I tend to call "bleed" in that it is adjacent
channel splash.

>
> Some antennas exhibit bandwidth characteristics that allow the harmonics
> already generated from a dirty radio, to be more easily radiated.
>
> "Some more than others. We still call it bleed."

And you would not be entirely accurate.

>
> But the underlying cause, in most cases, is the radio itself.
>
> "Agreed. But some antennas can and do bleed more than others. A

> fiberglass stick is more likeley to bleed than an aluminum constructed
> antenna. I've seen it time and time again."

You are correct. A "Antron style" stick antenna suffers from poor RF decoupling and lack of a suitable ground plane. This allows RF currents to radiate from the feedline itself, which places nearby homes in the "hot zone" of RF. A 5/8th wave aluminum ground plane antenna, would not exhibit this characteristic, and therefore may be seen as "causing" less RFI. But the "antron style" antenna itself in not necessarily "dirty", it just has a radiation pattern that is not neighbor friendly

> Adjacent channel splatter, is most likely caused by a screwdriver tech
> "clipping" the mod limiter.
>
> "Or an abundance of RF output. Or a transmitter in extremely close
> proximity to the receiver causing sensitivity overload. Or it can be
> from a sunbaked, weather worn, inefficient fiberglass bleed stick. "

In the example that Landshark refered to, he was not talking about TVI, RFI, or close-in neighboring CBers. It was a simple case of adjacent channel splatter. A condition that is caused by a radio that has been "tuned" improperly. The antenna does nothing more than radiate that signal. If 2 antennas are compared, and one radiates a stonger signal (a beam vs. a stick for instance), then the apparent splatter will increase in proportion to the increased signal, but that isn't due to the antenna "bleeding" more. It's just doing a better job of putting more signal (however dirty) into the air.

You have to separate your terms. The term "bleed" seems to be applied to a broad set of spurious emissions that are not all related.

If you tell me that an Antron 99 is more prone to RFI problems with neighbor's entertainment equipment, I would agree with you. The design of the antenna, does not allow proper RF decoupling, and allows the feedline to radiate, which places RF in proximity to powerlines and neighboring homes, and exacerbates RFI.

If you tell me that one antenna, radiates the second harmonic at a higher level than another type antenna, I would also agree. But it's still the radio that is generating the second harmonic.

But, in your example, you are talking about in-band splatter. An antenna cannot make a radio splatter more. It can't make a radio's audio any louder or softer (contrary to what I've heard some supposedly "knowlegable" techs tell people over the air). It only takes what is fed to it, and radiates it. Some antennas do a better job radiating, and will show a better signal.

I am willing to consider other possibilities. It is possible that some antennas exhibit such a broad bandwidth, that a broad "dirty" signal could be better radiated by one antenna over another. I have seen cases where users sound hashy and seem to splatter more on a receiver with a certain type of noise blanker. The noise blanker is actually a receiver tuned to a frequency out of the CB band (some Unidens use 23 Mhz). If a fairly strong local is spreading a dirty signal down to where the noise blanker receives, it can cause the received station's receiver to "splatter". I'd be interested to know if the noise blanker was on, and whether anyone tried comparing the difference.

In this case, the antenna is once again only radiating the dirty signal.

There is another case that I run into quite frequently as a repeater owner, and that is poor connections/corrosion on an antenna that, when hit by transmit power, act as a rectifier and generate broadband noise. This is usually only a problem for the attached receiver that's trying to use the same antenna as the transmitter, but it could also radiate in the local area. Although I doubt that it would carry more than a few hundred yards.

just because you lust and desire to be on the hf ham bands doesnt mean we all do. i've been banging cw since i was 12 and playing with electronics since even before. i'll say this again leland, if i desired to be a ham operator working on any of the bands then that is what i would do, nothing is holding me back as is you because i've already got a few years experience with code. its just something i do not wish to do. why would i want to talk to a bunch of people like yourself? by the way leland, since youve been a ham so long why havent you learned to copy code anyways? true enough you my not be interested in hf but theres alot of 2 meter weak signal work your missing out on by not having the full skills that most true hams have. i'd hate going to amateur functions knowing i'm not up to par with the others.

Hello Big Joe:

I want Tee Shirts, Ball Caps, Belt Buckles, Arm Sleeve holders uppers (ladies underwear you know) toys for the kids, Animals, (and not just all the CB Bowling League guys and gals out of Barstow, or the bikers) Circus Rides and Attractions ect. Oh yeah, lets not forget about the honey's Whooo hooo!

A DX contest ta see who talk the farthest. And a Corona contest to see who can produce the largest Corona, off his or her antenna.

Maybe a shoot out or two, a friendly, then not so friendly drag race, a BBQ with home made beer and wine, maybe even some of them squeezing, a dance with both kinds of music, and a car and truck show. Shootin contest, thats all ways big draw. I'll be there!

Life is Biiiiiitcheeeen!

... and the fact of the matter is that exceeding the legal speed limit
is within the design capabilities of all automobiles sold in this
country. This makes it very easy for one to inadvertently exceed the
posted speed limit, thereby unknowingly engaging in an illegal act.
For CB's licensed for sale in this country, in order to operate out of
band, or in excess of the legally mandated 4 watts of transmitter
output power, one must make very specific modifications or additions
to the radio equipment, thereby making the act of engaging in illegal
activity to be one of conscious effort. There is a significant
difference between the two.

I told him that Riley Hollingsworth was going to be at the Fort Wayne
Hamfest the other weekend. That would have been a perfect opportunity for
him to show off his illegal equipment personally. I was there, he didn't
show up. And it's such a short drive from where he's at too. He couldn't
have missed me because I was wearing a bright red Detroit Red Wings hockey
tee-shirt.

Phineas, but not deliberately, not regularly, and not as an organized
hobby. And I certainly didn't face a $10,000 fine and jail time for
going "a mile or two over the speed limit". -Aaron-

"We don't face one for DXing, either."

Technically, DXing on the legal 40 carries the same penalties. Read
Part 95.

"We aren't speaking of technicalities,we are speaking of real life, real
world applications. Decent attempt at obfuscation, though."

But *practically* speaking, "skip talking" on the legal 40 has never
been cited in any complaint to the FCC that I know of.

"No, that would be "technically" speaking.
"Practically" speaking is just what I said....that we don;t face a huge
fine nor incarceration for simply DXIng. See the difference? You're
quite welcome."

The problem is that CB'ers misinterpret this lack of enforcement in this
ONE AREA as a signal that "anything goes".

"There is no problem in the world of cb, other than isolated incidents.
Like the other well known troublemaking nocodee among us, you
manufacture and invent your own problems."

They use it as their prime excuse to take over frequencies that don't
belong to them and run excessive power. (As if the fact that you don't
get busted for going 70 mph in a 65 mph zone entitles you to go 150 mph
on the wrong side of the road)
Like Twistedhed.

"Bless you, my child."

He shoots skip with an "export radio" on "freeband"

"I do? Well, sometimes it's an export....I'm kinda in radio limbo right
now-- fear not, the Ten-Tec will be back up and running for the new
year."

yet, for purposes of this argument, he tries to include himself among
the 5 watt radio users DXing IN the legal 40 channels. Nice try tho....
-Aaron-

'As some claim you are a nocodes wife and a nocode yourself, I know it is difficult for you to understand the vast choices available to those with higher priveleges than what you have now. The same goes for myself..I am not limited to merely AM local, or AM DX, or SSB DX, or 40 channels. It is amusing how ones discussion of said activities can affect the emotional state of you like it does, but you have another nocode or 2 here that react the same way. You few anticbers give me much self-esteem with the strong and emotional reactions (insults included) my simple posts evoke."

country. This makes it very easy for one to inadvertently exceed the
posted speed limit, thereby unknowingly engaging in an illegal act.

"How in the hell does one "unknowingly" speed
in an auto with a speedometer in front of your eyes? Another poor
analogy."

For CB's licensed for sale in this country, in order to operate out of
band, or in excess of the legally mandated 4 watts of transmitter output
power,

"Whoa there big Ray, you're off and running on a tangent now and
tailoring the topic to something it isn't. You have not a legal leg to
stand on nor a single simple example to cite concerning any type
enforcement concerning simple DX talking, so you attempt to slide on in
the topic of extra power and freebanding?
Interesting.... it took 2 weeks to get the nocodee to understand this
and another
2 weeks of insults from him to me when he realizd how wrong he was. He
too holds an inability to stay on topic and feels powerless. Your reply
to my post is not relevant."

one must make very specific modifications or additions to the radio
equipment, thereby making the act of engaging in illegal activity to be
one of conscious effort. There is a significant difference between the
two.

"Indeed there is, so why bring up either when they stand on their own
merits and have nothing to do with what was said?"

An expert? That seems doubtful. I have read a few of his posts and they
all seem to be written by a 13 year old boy. If he had any credible advice,
I assume he would have posted it.

If you tell me that an Antron 99 is more prone to RFI problems with neighbor's entertainment equipment, I would agree with you. The design of the antenna, does not allow proper RF decoupling, and allows the feedline to radiate, which places RF in proximity to powerlines and neighboring homes, and exacerbates RFI.
If you tell me that one antenna, radiates the second harmonic at a higher level than another type antenna, I would also agree. But it's still the radio that is generating the second harmonic.

"The radio without the antenna will not cause bleed. The radio tried on separate antennas, one a fiberglass stick, one a Maco, will bleed on the stick. Conclusion: The stick bleeds."

6978. >>NEW SLUGS FOR BIRD METERS<<

I have NEW slugs that will work in either the BIRD or COAXIAL DYNAMICS watt meters-following are for 2-30 MHz (contact me for other wattages and frequency ranges)

5KW-$150
10KW-$160
25KW-$170

50-2500 WATTS ALSO IN STOCK

Also have NEW meters made by Coaxial Dynamics which will read both PEP and "Bird Watt" - at the flick of a switch....These meters have a larger size meter than the Bird models-Made in USA -2 year warranty

These are EXCELLENT meters - $390

Please Email all serious inquiries

Thank You

Hi Bert.

I had an Astroplane (AV-101). And I did like the performance.
I still have the owners manual for it, with diagrams, parts list, and
assembly instructions.

Regards,

Brainbuster.

Hi PipeDream.

I do not see how this could prove that he has an AOL account... as used by
the person now using the name "No Fear".
But as said before... internet names are not protected unless registered
trademarks. Some people use so many different (throw-away) names that it
cannot be surprising when one of the old discarded names is used by someone
else.
They cannot expect everyone to avoid using a name that they once used when
the list of old names goes on, and on, and on, and on....

The use of one account by several people may be an old game, but you can not
be sure who set up the account, and who just took advantage of the chance.
It may not be wise to use such accounts, as you could get the blame for what
others do... but I cannot condemn a person for wanting a bit of harmless fun.

Regards,

Brainbuster.

Do you know how long it will take to get crappy DSL?

Anyone but Verizon, those rat bastards.

Dialup is so f*cking slow.

If *Home can continue to provide me an IP address and DNS lookups,
I can continue with my connections, otherwise, lots of you will
end up in a killfile to speed things up.

The Astro-Plane was indeed a 5/8 wave. Measure the total length from feedpoint-to-top hat. (Down, across the loop, then back up again.) It's 5/8 of a wavelength.

Yes, there's something about those old American brand names that give off a warm glow. There's
still lots of folks that swear by Drake, and I don't blame them. I used to like Swans, and they
still have their following. Yes, I've heard all the stories about drifting, but we both know that any
tube-type rig needs to warm up before using. I used to turn on my Swan 700CX about 30-45
minutes before I ever keyed the mike, and never had a problem. Once the rig settled down, I
could zero beat an incoming station, and that old Swan would stay right there. Hehe, I could
always tell someone who never had used tube gear before because they would start talking before
their filaments warmed up. I'd have to chase them up and down the band trying to maintain a QSO. They are also the people most vocal about "drifting" radios being accustomed to solid state.

Train, I don't think you would "bootleg"--you're licensed, right? It's just that I am sensitive about
the 10 meter issue right now. LOL! Just to be fair, you might be interested to know that I called
Riley Hollingsworth on the phone Monday about that stuff going on on 14.313. It is a shame how
just a few people can create so much strife. When I called RH, there was a fella on there repeating, "SHADDUP, HILLBILLY, YOU FAGGOT" over and over. And another fella singing
(if you can call it that) something about a "porkbutt" (whassup wid dat??). Riley asked me, "you
mean to say they are doing that NOW?" RH turned on his radio and listened, so I imagine there
will be a couple of NOVs coming up. Like Rh told me once at a hamfest, "No matter what the
service, ya just can't regulate 'stupid'"!

No! I am no longer a ticket holder.....Nor do i wish to be! I do have some things left over from the days when i was active.I was turned off to it long ago and see no reason to go back now. I have always rolled in the direction the radio flow took me and where I am now is a comfortable place for me as far as radio goes. You know as well as I that there are plenty of things to do in the radio field other than just talk on them. I enjoy getting a setup going and running tight as well as doing all the equipment matching and tuning and that is enough for me now. I do get a wild hair from time to time and fire up something other than one of the Saturn II's in the car or truck but that doesn't happen much anymore now that we are back in Jersey with all these yuppies surrounding me.

I have no use for or reason to operate legally.
There are thousands of us who will continue to operate as we see fit
without
regard to whatever some schmuck like you or your little click of
over-opinionated morons have to say about it. You can cry all you like
but
those of us who can, will and those of you who can't......Will
continue to
cry about it.
Train

>--you're licensed, right?

It's doubtful. He claims he was once licensed. Was it revoked?

> I like my 440SAT for just about anything but the absolute best time for me
> is when i fire up the Drake.
> Train

That makes you wonder exactly what frequency that Drake of his is on.
Not to mention the TS440.

>It's just that I am sensitive about the 10 meter issue right now.

Be sensitive to the idea that Train is likely selling amps to NJ
truckers who operate on 28.085.

> the person now using the name "No Fear".

Well It is better proof than he has of me with an aol. Why do you say
someone else is using the name now ? He made the only 2 post that were ever
made in a test Ng, this was done Oct 2, then 4 were done on Thanksgiving.
And the name has not been used since then and since I caught him the next
day. And the same with Frenchy he made the posts with his ip address on
them, he then got caught
using it on Aol.

> But as said before... internet names are not protected unless registered
> trademarks. Some people use so many different (throw-away) names that it
> cannot be surprising when one of the old discarded names is used by
>someone else.

No one complained about the actual name that was usedbut the name and
subsequent fake email addy where both of course different, but isn't it
funny that we have one Landshark who complains to isp's trying to get
peoples accounts yanked for changing headers etc and he does it himself, he
crys and crys like a little baby about others, yet he is doing the same
thing. I see where you are coming from Ballbuster you and your limp wristed
friend from San Fransico have buddied up of course and you will try to
defend his actions not matter right or wrong..

> They cannot expect everyone to avoid using a name that they once used when
> the list of old names goes on, and on, and on, and on....

useless Bs...

> The use of one account by several people may be an old game, but you can
>not be sure who set up the account, and who just took advantage of the
chance.

I see no use of 1 account by anyone, It was setup and tested by you know
whohe has a problem with me that is very clear and he will go to anylength
so it seems, he is still mad at me don't be so niave or don't expect me to
be if you wan't to play that game go for it.

> but I cannot condemn a person for wanting a bit of harmless fun.

Thats all we all want but some derive it in different fashions

I do believe Avanti claimed that it was a 5/8 wave omni. The short height was used as a marketing gimmick; i.e. big performance in a small package. Avanti also claimed that the majorityof the transmitted signal radiated from the top rather than the base, "as in conventional ground planes." I don't know how true that claim is. Take care and 73.

It's called PRB-1, (Preemption) Chris. Good luck to you if you ever really need it. Those deed-restricted community and incorporated village rules ARE laws that can only be removed via the "real" legislative process or federal preemption. (PRB-1) Wait 'till you want to put up that 55' Rohn and your brand new tribander. When you tell the local LEO that the villages rules are "in and of themselves" against the <federal> law," I suspect he/she'll laugh as hard as Aaron's imaginary FCC field agent who has just been told that "I was only listening." Take care and 73.

Mark

Chris, as a newly HF privileged ham, you'll find that this may hit allot closer to home than it first appears to. I wrote this to offer a little humor, but you've touched on a very valid sore spot. By the time you do get them to allow the tower/antenna, you'll be very broke and very tired...sort of like a NAL. Again, take care and thumbs up on the Extra privies.

Deed restrictions are contractual agreements which are binding only when enforced by a duly appointed homeowners association or in in some rare cases by an adjoining neighbor with deep pockets. Deed restrictions do not carry the weight of law and are not enforced by local government. Many communities encourage a 'clean' appearance in their neighborhoods. While it can be encouraged, it can not be required without the sanction of a HOA, and then accomodations must be made for reasonable antennas.

Which may explain its lack of neighbor-friendliness. 5/8 cannot be
decoupled from their coax. They do require some minor fiddling to keep the
coax from being part of the system

Hello Dave: How are ya doing?

Yes The Astro Beam had some big time rejection all right.

Avanti really showed some antenna design initiative in there Hay Day.

A guy running a Astro Beam, just a half a mile from me could make his signal disappear into the noise with it. The side null of a Moonraker 4 or 6 was also very impressive.

With the side null (in the area of -40 to -45 dB) of the my Moonraker 4, I could attenuate the Goof Balls -40 to -45 dB, as compared to the front direction of the antenna, and switch over to a Omni directional antenna for transmitting, allowing me to talk to other stations miles away from the Goof Balls trying to interfere.

Jay in the Mojave

Agreed, however I did state deed-restricted communities, and incorporated villages (& these puppies are LAWS!)" I guess I should have clarified that while the co-ops and condos are NOT laws, the incorporated villages are the local government and do indeed carry the weight of the law. Remember Gary, this is a "funny" to illustrate how distorted any "legal" argument can become when "common sense" takes a back seat to "technical correctness." Even if the co-op and condo rules do not carry the weight of "governmental law," they do express the "bandplan" of the community. The aforementioned folks, McCoy, Carr, and Lewallen could as easily be construed as encouraging "residential lids." Take care and 73.

This sounds like a troll. Please provide a copy of a post where
someone got uptight about DXing on the legal 40.

>Aaron's imaginary FCC field agent who has just been told that
>"I was only listening."

Likewise, please provide a copy of the post where I mention an FCC
agent being told that someone was only listening.

Hi all out there...

Anyone know if you can get parts for the HR2510 still???

Need some IR 2429 IC for the LCD meter board....

Can anyone help
Please......

Well Tony, it's a 10 & 12 meter amateur radio transceiver. It's not a CB. But I can see by the various ads on the net the "export" pushers are doing a great job of brainwashing the average CBer to feel that they must now have a "10 meter" radio.

Jerry O, you say you're concerned with CBers on 10 meters. Jer, take a good look because this right here is ground zero, this is where it all starts, with CBers and truck-stop 'techs' and 10 meter radios. Those guys you hear on 28.085 don't just magically "appear" there one day out of the blue. It starts with someone recommending and selling them a "10 meter radio".

Note: The deed restrictions in discussion are a civil matter, not criminal. Your local cop will come out to stop the riot in your front yard when the neighbors see the Rohn going up, but they have to sue you in court and then win to get the Rohn down. If they come over at midnight and rip it down themselves, then that is criminal and that cop will come out and get your neighbors for that one.

Now I understand why radical Muslim terrorists are so quick to commit suicide. Just look at their lifestyle:
* No premarital sex.
* No booze. None. Never.
* No TV. No cable TV. No satellite TV.
* No Spice channel. No Playboy channel. No ESPN.
* No Hooters!!.
* No Sports Illustrated Swimsuit Edition.
* No organized sports of any kind. That's right -- NO sports!!!.
* Women have to be completely covered and wear veils. No thongs. No Victoria's Secret Stuff.
* Very, very, very few cars. Camels. Lots of camels. Stinking, filthy camels.
* Sand. *&^%** sand everywhere!
* More sand.
* Ever try to fish at an oasis? No bass boats. No bass. No fish.
* Sandstorms. More **$#@ sand everywhere!
* Rags for clothes and hats.
* Camel and goat burgers cooked over burning camel dung chips
* Eating with your right hand only -- because you wipe your butt with your left hand.
* Constant wailing from the asshole next door ...
.....no,,,wait, that's music!

And when you die it's supposed to all get better.....

No wonder they volunteer!!

A guy is walking along the strip in Las Vegas and a knockout looking hooker catches his eye. He strikes up a conversation and eventually asks the hooker, "How much do you charge?"
Hooker replies, "It starts at $500 for a hand-job."
Guy says, "$500 dollars! For a hand-job! No hand-job is worth that kind of money!"
The hooker says, "Do you see that Denny's on the corner?"
"Yes."
"Do you see the Denny's about a block further down?"
"Yes."
"And beyond that, do you see that third Denny's?"
"Yes."
"Well," says the hooker, smiling invitingly, "I own those.
And, I own them because I give a hand-job that's worth $500."
Guy says, "What the hell? You only live once. I'll give it a try."
They retire to a nearby motel. A short time later, the guy is sitting on the bed realizing that he just experienced the hand-job of a lifetime, worth every bit of $500.
He is so amazed, he says, "I suppose a blow-job is $1,000?"
The hooker replies, "$1,500."
"$1,500? My God! No blow-job could be worth that!"
The hooker replies, "Step over here to the window, big boy.
Do you see that casino just across the street?
I own that casino outright. And I own it because I give a blow-job that's worth every cent of $1,500."
The guy, basking in the afterglow of that terrific hand-job, decides to put off the new car for another year or so, and says, "Sign me up.
Ten minutes later, he is sitting on the bed more amazed than before. He can scarcely believe it but he feels he truly got his money's worth.
He decides to dip into the retirement savings for one last glorious and unforgettable experience.
He asks the hooker, "How much for some pussy?"
The hooker says, "Come over here to the window, I want to show you something. Do you see how the whole city of Las Vegas is laid out before us, all those beautiful lights, gambling palaces, and showplaces?"
"Damn!" the guy says, in awe, "You own the whole damn city?"

"No," the hooker replies, "but I would if I had a pussy."

They are free, you log on to
them and give them the passwords. Hotmail
accounts are free too, but do not give you
posting rights. I have a feeling that just like
when people were abusing Newsranger,
that google will just cut off the rec.cb.radio
group all together..

It's ok Buster,
He just wants an argument, kill file him like I
did. He's sore because I showed posts made
from MIBX that first used one of his screen
nics, then the very next time he was using it.
I explained the same thing that it must have
been him, he denied it. He's been accusing
me for months now of having an AOL account,
I even showed him a complete list of all my
hardware showing that I don't even have a
modem, he still whined about I had AOL.
Well he has threatened and cried, but I have
used this account, Pacbell and Netcom for the
past 11+ years, so he can complain all
he wants. I say send an abuse e-mail to AOL,
I'll still be here because I'm on SBC, not AOL.

Landshark

PS where's that Exe. file you were going to send.

> stick. Conclusion: The stick bleeds."

A flawed conclusion based on an incomplete understanding of the problem.

In the case of RFI, in most cases, the "problem" is caused by the lack of proper shielding of the device being interfered with. The greater the near field RF, the greater the amount of RFI. Some antennas radiate such that they put more of their radiated energy in the path of neighbor's homes, and make the RFI problem worse. But they are not the root cause of the problem.

A very dirty transmitter on a dummy load will not cause RFI, but if you put it on an antenna and it magically causes RFI, is it the antenna's fault?

If I'm running an Antron 99 and not causing any RFI because I have neighbors that have high quality consumer electronics, is my antenna still "bleeding"?

If another neighbor CBer fires up a Galaxy Saturn Turbo (one of the dirtiest radios around) and he runs a Maco, and bleeds the same neighbors that my Antron does not, is the problem now his Maco?

But all this aside, this has nothing to do with the original statement that concerns in-band adjacent channel bleed. One antenna will not "bleed" any more than another in this situation beyond that caused by the extra signal level caused by a superior antenna gain. Adjacent channel splatter is caused by a signal falling outside of its allocated bandwidth. Allowing an audio frequency response that exceeds 3500 hz, or allowing modulation to exceed 100% are the 2 most common ways of creating a wide signal, to an otherwise clean transmitter. There is nothing inherent about any antenna that would have any affect on transmitter bandwidth. It is possible that a transmitter is so unstable

that changes in impedence caused by different antennas COULD change a transmitter's spectral purity, by allowing the final to oscillate or generate in-band spurs. I've seen certain Galaxy radios do this on SSB. Usually those radios have been "peaked and tweaked" for max output (usually without the benefit of a spectrum analyzer), and have become unstable and output impedence sensitive.
One might draw the conclusion that the antenna "caused" more bleed, but in fact it's the radio's transmitter that is responding improperly to the differences in antenna impedences.

What really blew my mind was when I was able to drop the signal of a guy about an 1/8 mile away (who usually pegged the needle at +30 db) down to about S9. It was a very sharp point that was tricky to hold. I had to "bump" the rotor control in small steps until the sharp null point was reached. The really interesting part was looking at the low S9 signal, I could remove the coax from the back of the radio, and his signal was actually stronger without ANY antenna attached to the radio, than it was connected to the Astrom Beam, in the null spot. Needless to say, it made the difference between hearing his bleedover on most of my channels, and some small splash one channel either way.

Awesome antenna!

>
>

A poor analogy. The difference here is that CB DX is plain and simply ILLEGAL. It is addressed specifically in FCC regulations. Running a ham (or CB) station in a deed restricted community is not. There may be covenants and restrictions on antenna structures that are based on aesthetic appearance, but in no case, that I've heard about, is actually operating a transmitter not allowed. If you can creatively construct "disguise" antennas that do not violate the intent of the deed restrictions, you are free to do so. If I put out a fiberglass flag pole, that just happens to cover up an all band HF vertical antenna, no one complains, and no rules were broken, since there is no restriction against a flagpole.

As a matter of practicality, dxing on the legal 40 carries about as much penalty as failure to observe the 5 minute on, one minute off rule, or failure to identify with proper callsign (When that was required). Usually just a summary offense, and not worth pursuit in most cases.

But this arguement is about principles. The fact that someone chooses to ignore a law (or rule for those hung up on semantics) simply because they perceive relative unimportance says far more about their moral principles.

If the only way you'll obey a law is if there's a gun to your head, or the threat of REAL retribution is enough of a deterrant, rather than obeying because it's simply the right thing to do echoes the lack of proper upbringing that most parents of the last generation are guilty of, for not instilling proper values.

50 years ago, if there was a rule, most people obeyed. They didn't ask why, they didn't have to. It was understood that a civilized society needs to have rules in order to remain civilized. The more rules you ignore, the more unraveled our society becomes, and the closer to anarchy we become.

Now we have people here trying to spin and justify their reasons why a certain rule (or rules) are somehow unjust and thow they are within their "right" to ignore them. All of these excuses are lame. Maybe you are sucessful at appeasing your own morally corrupt conscience, but the rest of us don't buy it. There is no such thing as a victimless crime.

>true
>that claim is. Take care and 73.

Well, yes and no. It's true that the Astro Plane *does* radiate from the top of the antenna...but a standard ground plane (radiating from near the base) would radiate at the same height. Reason being that the Astro Plane bolts to the mast at near the top of the antenna vs the ground plane which mounts near the bottom. Hence, both antennas radiate from just above their feedpoint.

7076. Re: Suggestion for a 3 element flat side 11m beam?

Newsgroup: rec.radio.cb

Source record: 106038

mopar, ran one of these flat side for a year,it worked really well.very wide banded because of its short boom length (11 feet) . will easily work all of 26-27 mhz. with low swr. suggest setting it to the lower frequency adjustments as follows. reflector-18'-6" driver-17'-6" director-16'-9". the gamma should be set as recommended by maco....24" on the slider,4" on the capacitor. for some reason this antenna bands out better (27-26) with the element lengths set at the "lower frequency settings) worked austrailia with this set up many times.

good luck and good dx-ing!!! elpasogunslinger

Do you need a "beam" or would a simple omnidirectional horizontal antenna work as well? The problem with any kind of beam antenna becomes apparent when you need to remain in contact with two or more stations that may not be "lined up" in the same compass heading for you, thus you either have to off point your beam relative to one station or both, or wear out your rotor swinging the beam back and forth between the stations.

The solution to that problem is using a H.F. version of the old V/UHF omnidirectional horizontal antenna called a turnstile. It's a very simple antenna constructed from two horizontal dipole antennas at 90 degrees to one another with a matching - phasing section made using coax cable.

You can find a reference to this antenna type at the following URL:

http://www.cebik.com/turns.html

If you still insist on using a beam antenna then take a look at the information at the following URL as well:

http://www.cebik.com/3lyg.html

Before you make any decisions take a look at the gain you're likely to see, and keep in mind that one "S" unit is anywhere from 3db to 6db, with the commonly used figure of 6db as the normal value. That sort of puts the benefit of any antenna in to perspective, i.e. how much of an improvement in the signal is one likely to see.

If your objective is to cut down QRM from other stations then a beam with a good front to back ratio is the way to go.

From: nojunkmail_n3cvj@worldlynx.net (Dave Hall)
Twistedhed wrote:
If you tell me that an Antron 99 is more prone to RFI problems with neighbor's entertainment equipment, I would agree with you. The design of the antenna, does not allow proper RF decoupling, and allows the feedline to radiate, which places RF in proximity to powerlines and neighboring homes, and exacerbates RFI.
If you tell me that one antenna, radiates the second harmonic at a higher level than another type antenna, I would also agree. But it's still the radio that is generating the second harmonic.

"The radio without the antenna will not cause bleed. The radio tried on separate antennas, one a fiberglass stick, one a Maco, will bleed on the stick. Conclusion: The stick bleeds."

A flawed conclusion based on an incomplete understanding of the problem.

"I may have a lack of comprehension for the entire equation, but the end result has remained the same in all the instances I have been exposed to when extra power is not involved, and even some cases where it was. Let me try again.....a radio will not generate any BLEED (and all that goes with it) by itself, NOT connected to an antenna. The radio can bleed more with a fiberglass stick than it will with aluminum in most cases. I have never seen the opposite, where a bleed problem was fixed by going from fiberglass to aluminum, have you? Now, if you feel the need to delve into specific characteristics, I ask you to consider the scenario of using a fishfinder to find the big schools. You locate the big fish, the water is a low chop, the weather is nice, the bait is fresh, but nothing is hitting any kind of bait you throw. Now we know something is going on, but we are't certain exactly what. Does it really matter? To some of us, yes..to others no. What we do is take another course of action IE: another body of water, another time of day, artificial stimuli of feeding, go to lunch., etc. The thing is, we know something is wrong, so we change it, and we begin with simple actions and the majority of the time it is rectifiable with simple techniques. The comparison was done only to illustrate a point of view.

I have seen several bleed problems fixed when switching out fiberglass to aluminum...it works.....if you wish to educate the hows and whys and break it down into painfully tiny semantics, go for it..I'm all ears."

In the case of RFI, in most cases, the "problem" is caused by the lack of proper shielding of the device being interfered with. The greater the near field RF, the greater the amount of RFI. Some antennas radiate such that they put more of their radiated energy in the path of neighbor's

homes, and make the RFI problem worse.
But they are not the root cause of the problem.

"Nope, they aren't the root cause all the time, but if the problem can be alleviated by a better antenna, all the better."

A very dirty transmitter on a dummy load will not cause RFI, but if you put it on an antenna and it magically causes RFI, is it the antenna's fault?

"It depends. If it bleeds on an Antron but not a metal antenna..I would place the blame on the antron, although I will admit I am prejudiced against fiberglass type antennas. One hardly even saw fiberglass base antennas compared to metal antennas before the eighties and nineties. The popularity of the fiberglass stick is due it's low price and lack of ground planes for easy handling. For that low price, you get a cheaper antenna made from fiberglass. Many radios never bled on metal antennas. All of a sudden they bleed on fiberglass antennas but not metal. In those cases I still say it's the antennas fault."

If I'm running an Antron 99 and not causing any RFI because I have neighbors that have high quality consumer electronics, is my antenna still "bleeding"?

"How could you know unless you heard it yourself or someone complained?"

If another neighbor CBer fires up a Galaxy Saturn Turbo (one of the dirtiest radios around) and he runs a Maco, and bleeds the same neighbors that my Antron does not, is the problem now his Maco?

"Nope, but let's run with that. Put that same Galaxy on a fiberglass stick AFTER it bleeds on the Maco. Does the bleed increase? You betcha!."

But all this aside, this has nothing to do with the original statement that concerns in-band adjacent channel bleed.

"For some reason you just limited it to "Channel bleed." I call that bleed as well. Most cbers refer to that as bleed, and also refer to interference with devices as "bleed", also."

One antenna will not "bleed" any more than another in this situation beyond that caused by the extra signal level caused by a superior antenna gain.

"I still disagree. An A99 didn't get the reputation as a "bleedstick" unfairly. Why is it if I have at ground level the a99 and a 5/8 maco, does the bleed from the 99 get into almost everything compared to the maco, no matter which radio is attached?"

Adjacent channel splatter is caused by a signal falling outside of its allocated bandwidth.

"Yes, that is another form of what is referred to as "bleed."

Allowing an audio frequency response that exceeds 3500 hz, or allowing modulation to exceed 100% are the 2 most common ways of creating a wide signal, to an otherwise clean transmitter. There is nothing inherent about any antenna that would have any affect on transmitter bandwidth. It is possible that a transmitter is so unstable that changes in impedence caused by different antennas COULD change a transmitter's spectral purity, by allowing the final to oscillate or generate in-band spurs.

"Yea, on some antennas more than others, like a bleedstick."

I've seen certain Galaxy radios do this on SSB. Usually those radios have been "peaked and tweaked" for max output (usually without the benefit of a spectrum analyzer), and have become unstable and output impedence sensitive.

"Yep. And I've seen this exact problem alleviated by a switch to aluminum from fiberlass."

One might draw the conclusion that the antenna "caused" more bleed, but in fact it's the radio's transmitter that is responding improperly to the differences in antenna impedences.

"I can certainly see where that may be a case. I also am convinced that the fiberglass base antennas are more prone to bleed verses a metal antenna, no matter what the cause. I remain of the idea the symptom (if not the problem) is the cheaper fiberglass antenna will bleed before a metal antenna will."

My cousin sent me this
from Japan, you got to love
this:

Hi all,

Thought I would share this with you. Some of you may have heard me mention
National Azabu Supermarket where we buy a case of Coke for Y2500 or about
$21. It is considered the foreigner's supermarket since they carry a lot of
things from overseas. Anyway when I was there yesterday, I noticed that
they were selling cut Christmas trees set up in stands with water. Now I
have seen some florists selling potted Christmas trees for Y8500 ($75) and
up depending on whether they were decorated and thought about getting one.
When I saw the cut trees (which were about 4 - 6 feet tall and nice but not
very full) I trotted over to check out the price. Care to take a guess?
(scroll down)
>
>
>
>
>
>
>
>

They were selling for Y40,000. Yes, these trees were going to cost $325!!!
What amazed me even more is that many of them were marked sold.....The
seller told me a couple were going to foreigners but most of them had been
sold to Japanese people. Anyone want to join me in starting a Christmas
tree farm here in Japan? Now when you go get your tree, keep these prices in
mind and the ones locally will look incredibly cheap.
Take care.

Ok, so it's clear. Using an amp on 12 or 10 meters is illegal. Better start hanging out on the ham newsgroups so you can start reporting them to the FCC anytime they mention using one on either of those bands.

But that would not have been the case. I mearly wanted to know what the max output of the Palomar TX-150, TX-100 and the Palomar 100. I can't imagine how that can get confusing unless you read into it. Everyone's sitting in front of their computers, red-eyed from staring at the screen for so long, looking for people to admit to the horrible crime of using illegal power, that lots of people tend to read beyond the initial post and try to incite things.

>"Do you really think I'm that stupid that I wouldn't have thought to hook

Telling me to hook the amps up to a watt meter to find out the output levels is saying that I'm stupid. If I had said my radio isn't working and you told me to turn it on, that would be the same thing, regardless if you actually said I'm stupid.

Aaron,

I KNOW that. And I have even taken the step of visiting nearby truckstops to see if they are
selling the stuff (haven't found any yet--maybe they keep 'em hidden?) If I DO find any, RH
will know it in a skinny minute. If I happen to see a trucker operating on 10 meters while I am
out driving the interstate, he'll get his picture, tag taken and a recording of the transmissions turned
in as well.

We don't disagree on the illegal stuff. What I disagree with is the taunts, the flames, the arguments and the constant repetition of rules. They KNOW the export rigs and amps are illegal. If somebody doesn't CARE, all the rules citing in the world won't help. I don't get the flames because folks know I don't like illegal stuff, but I am not a radio cop, and I treat people with respect. If
somebody asks about whether something is illegal, yes, I'll tell 'em because they ASKED. Even
the FCC field agents talks nicely to people--even when they are explaining that one's equipment is
not legal. I can't do anything about "freebanding" except when they get onto CAP frequencies.
Then I submit an interference report thru channels to USAF Frequency Management. I CAN do
something, outlined above, about the 10 meter incursions. Meantime, I keep my mouth shut because I have NO authority to be a radio rambo. If you are so concerned about the legalities, then do what I am doing; help the hams and FCC get rid of the 10 meter bootleggers. And talk
nicely to the people here. You might, in time, make a few friends.

Naw, all you had to to do was fill out a form and send it
in to the FCC for your CB License. $15.00 was the fee
at one time.

GMRS is only a form to fill out (Old Class A CB)

Hello,
I have read the 3 element posting here and decided to say a few things.Before I moved hear recently I had a tower 30 feet in the air.I used a ham 4 rotor.I bought a 4 element maco but wanted to try horizontal but with the exception everybody I talk to in the area is vertical.well I searched the net and found yaesu had a rotor for elevation on the satelitte antennas.I bought it here is a link to the site where it is at all amatuer radio places usally carry yaesu products.
http://www.yaesu.com/amateur/g550.html
Instead of putting the boom to mast plate on my beam I put this rotor and attached the rotor to the mast well to say the least it works great I can use my beam flat or vertical.I did this to save room and not have to have a bulky antenna up.Well thought I wud share this with you later Mike

Mark,

As one person said, it is not against covenants to have a "secret" antenna
disguised as a flagpole.
There is one antenna disguised to look like a roof vent called the
"ventenna" that slips over the
existing vent for 2 meters. PRB-1 is a limited preemption and ARRL is
working, so far unsuccess-
fully, to get FCC to take it further.

My own take on this is, well, why would a radio hobbyist move into such a
place anyhow? When I bought my own house 15 years ago, I checked to affirm
that there were no ordinances or coven-
ants to prevent me from putting up dipoles or towers. If there had been,
I'd be living somewhere else right now. I simply will not have some
blue-haired, pointy nosed old lady looking at me over
her ben franklins and telling me what I can or cannot do with my own
property. PRB-1 does pro-
vide some protection for hams, but it doesn't go far enough, IMHO.
Incidentally, could this preemption be used by CBers, or is it just for
hams?

Jerry

Gary Danaher wrote:
>
> Note: The deed restrictions in discussion are a civil matter, not criminal.

Deed Restrictions have become ubuquitous in the real estate scene with
modern
subdivisions. Some are so poorly written as to be worthless since they
approach the subject of Radio from one angle by prohibiting all
transmissions.
This clause was deemed unenforceable when one nieghbor wanted to go
after
his radio hobbyist neighbor and the lawyers and judge at a pretrial
meeting
decided that it was too vague since it was pointed out cordless phones,
Cell phones and keyless entry along with a myriad of Part 15 devices
"Transmit". The consensus was that it was Unenforcable and the
injunction
was denied.

Another clause seen, simply states, "No static interference shall be
caused by any radio or electrmatic transmission." This clause was
also deemed vague when Part 15 was brought up and the whole issue
was DOA.

The "best" route taken is to restrict antennas but then what you
don't see, doesn't exist under civil law here in Louisiana. It
must be open, continous and hostile for a deed restriction to be
in violation. Mrs. Kravitz can't come snooping around looking
for what she doesn't see openly. Our 4th amendment in
Louisiana prevents privacy invasion by private
citizens (STATE CONSTITUTION), so you had better see it or
prove it beyond a shadow of a doubt.

Your

> > Aaron's imaginary FCC field agent who has just been told that "I was only

> > listening." Take care and 73.

Most small time cops (in fact all) here will first call the town
attorney
and then proceed on his or her instructions. A small town nearby just
exempts Amateur Radio Ops from the "Antenna Rules" since PRB-1 came
close to voiding their entire ordinace.

7108. Gay CB'ers Web Site

Newsgroup: rec.radio.cb
Date: 2001-11-29 18:07:51 UTC
From: twithedsmaster@yahoo.com
Message-ID: <8f86ecaf.0111291007.5ebdf71@posting.google.com>
Source record: 106120

Rumor has it that there is a web site coming for something called "United Gay CB'ers of America"

The story is that twithed wants to leave the newsgroup and bring all his playmates to a place where they can talk illegal stuff and gay sex without his Lords and Masters, the Anti-Keyclowns, bothering him.

The rumor further states that trainedpuppet is a co-sponsor of the site, and used the proceeds from the sale of his golden dildo<purchased by sideband>to pay part of the costs to run the site.

7109. SWR jumper cable length?

Newsgroup: rec.radio.cb
Date: 2001-11-29 18:26:11 UTC
From: John Smith <someone@microsoft.com>
Message-ID: <75vN7.2333$ud.327743@news-nb00s0.nbnet.nb.ca>
Source record: 106121

I would like to start out by admitting I am a CB newbie and have almost no experience or knowledge of CB stuff. I recently installed a system in my Jeep as it was mandatory for participation in an off-road event.

Anyway, it sounds ok when the engine is turned off, but like hell when it is running and I would like to do something about it. I am guessing it may need some type of noise filter, but may also benifit from being tuned.

I picked up a SWR meter from Radio Shack and consulted the how-to docs on the firewire site. I think I have a good handle on what I have to do, but I have one remaining question - does the length of the jumper cable between the radio and the meter matter?

Please post replys here please.

Thanks.

Pipe Dreams, you are so totally correct. Why should anyone care if the vomit bag gets offed. Live like a nigger, die like a nigger. Fine by me. His last thoughts will be..."I didn't have to die, but I wanted to be a gangsta." Our thoughts after that will be..."Good, the piece of shit is finally doing something positive, he is fertilizing the earth."

Ya know, you can understand assholes like the Taliban. They grab power and resources because they are quite limited in a country like Afganistan. Plus they are ignorant goatherders witout much other opportunity. However, the cowardly, "gangstas", as these faggot pigs call themselves, have all the benefits of American citizenship and shit on it. Their common denominator with the Taliban, etc. is their ignorance. Dweebo is a shining example of this sort of walking and talking human feces.

Dweebo and all these pussy assed "gangstas" are living proof God has a sense of humor! He made them without telling us real humans that he put morally devoid, ignorant facsimilies of humanity on the same planet. The more of them that die, whether by cops, drugs, drive-by's, whatever...the better. The morality quotient, not to mention the IQ of this world, increases every time one of these scumbags croaks. This is not to mention that the earth of this world is also better fertilized as a result.

None of you gangsta pieces of shit would last 10 seconds in the real world. You included, Dim Dweebo. You aint shit, you are too stupid to realize you aint shit, and you are too stupid to even hope to be better than the shit you are.

For all practical purposes the length of the cable between the radio and SWR meter doesn't matter. But don't get crazy, 3 or 4 feet is ok but not 20 feet.

To your noise problem, what kind of noise? Is it a whine that increases in tone as your engine speed increases or static/popping noise? If it's a whine then a power line filter should do the trick because it's coming from the alternator. If it's static or popping then it's from your ignition system. Try new ignition wires.

The noise is mostly static and does not seem to change noticably with engine speed. The ignition wires are new - they were installed just a couple of months ago. Could it be the spark plugs? I remember years ago buying plugs for a motorcycle I could choose between resistor plugs or standard the difference being one caused radio interference if I remember correctly.

From: 'Doc <w5lz@icok.net>
Message-ID: <3C06931C.76F664CC@icok.net>
Source record: 106129

John,
The length of the jumper isn't critical at all. Any
thing long enough to reach from 'here to there', and maybe
a little longer for convenience.
With ignition noise the frequency of the 'pops' speeds
up when the motor is speeded up. Alternator noise is sort
of a 'whine' that changes tone as the engine speeds up or
slows down. If it's a constant noise, and if your vehicle
is fairly new, I'd suspect the fuel pump. There are various
'fixes' for each of these, so the 'cure' depends on where
the noise is comming from.
Hope that helps a little...
'Doc

Not really. just saying that if you don't like the
reception that a horizontal beam gives you, you can
always turn it to the vertical position.

Kenneth,
The lengths of the antenna's elements would
probably carry over to a different location, but
not the dimensions of the gamma match. That
would depend on the specific location because of
the antenna's surroundings, which does affect it's
impedance matching.
'Doc

Be careful when you buy "resistor plugs." Check your owner's manual or the dealer to see if your ignition system can deal with them. They won't hurt anything but you may end up getting really bad fuel economy. Also, try grounding the radio VERY WELL. Most of the insides of cars these days is plastic. Take a ground strap from a screw (not the negative terminal) on the radio to a bolt or screw on the firewall. If you have some extra coax laying around the ground braid makes excellent ground strap material, if you don't then any large wire (#10 or bigger) will do.

Kevin, WB5RUE

Just don't believe the part about cutting your coax for 18'.
They claim:
> At 18' the voltage curve has dropped back to the zero voltage point
> where the cable meets the antenna which reduces the reactance within
> the cable itself (a null cable if you would).

This claim has no basis in fact.

genocide,some of us here in elpaso have been discussing this very idea. how did you over come the problem of the fact that the elevation/azimuth rotors will only accept a mast size of 1 5/8 inches.(smaller than the diameter of most boom diameters?) did you cut the boom and weld or rivet in a pipe of smaller diameter? please let us know because its someting we were thinking about trying. thanx elpasogunslinger

ROFL! Nice "rumor"... Originated in your own head, no doubt.

Still jealous, "N8", that you're just a codeless tech, and I've made it
to Extra class? Hmmmm?

It shows.

Are you looking for something off the shelf then or would you be willing to do a bit of construction to make your own? There is a load of material out there for 10m beams that could be rescaled for 11m use if you want to go the home brew route.

Also a really good place to post your request is the "rec.radio.amateur.antenna" news group. There is a bunch of really sharp guys who could make some fine recommendations one way or the other just for the asking. Some of them are regular full time antenna designers for pay.

Just another example of Tim not knowing the origin of the 6 db per "S" unit figure. The truth of the matter is most radios get calibrated to what ever the tech feels like the day he worked on it, i.e. it's all over the place, but you have to have some commonly accepted standard even if most people don't use it.

Antenna gain is antenna gain regardless of what band it's used on Tim. If you did any antenna work at all beside buying your 1/4 wave ground plane at Radio shack you would already know this.

Mopar, Go with a "quad type antenna " unless you need to have alot of F/B ratio to decrease noise/bleed, the 3 element is about as useless as tits on a bull, at least the PDL has as much gain and dual polarity at the flip of a switch. A Moonracker, JoGunn, Shooting Star " dual polarity" antenna would be the most versatile option, this would give you more gain in both horizontal and vertical positions, since now your beam will have lets use 12 dB in both V and H position as well as a 5 db Omni. Now with the 3 element horizontal you may get maybe 9 db in horizontal and are stuck at 5 db with an Omni . An improvement all the way around. So unless you need major f/b rejection the 3 element in my opinion is not the way to go. Also the turning radius between the antennas is not much different when the 3 is mounted horizontal.

Exactly Leland, Tim is still a pup at this... since when did he become a tech anyway?

S Meter Calibration Values

Signal points into 50 ohms dBm into 50 ohms

S0
0.1uV
-127dBm

S1
0.2uV
-121dBm

S2
0.4uV
-115dBm

S3
0.8uV
-109dBm

S4
1.58uV
-103dBm

S5
3.16uV
-97dBm

S6
6.3uV
-91dBm

S7
12.6uV
-85dBm

S8
25uV
-79dBm

S9
50uV
-73dBm

These values are valid on HF. on VHF, values are 20dB lower e.g. S9 is 5uV
or -93dBm. Most commercial transceivers do not adhere all that closely to
this scale.

Tim a horizontal 3 element has a 18-19' turning footprint, a moonraker 4 on a 16 ' boom has a smaller turning circle. so much for the small space theory.and your zero HF experiance, unless you count freebanding.

Sorry Martin, many towns definition of what is a reasonable accommodation are very very different from each other. It is also called the Private Radio Bureau not bulletin. I have been to superior court in my state fighting an antenna case against my town. My town has a 8' height restriction whether it is off the rooftop or off the ground. This ordinance was basically drawn up when the 8' satellite dishes were popular. It has no provisions for amateur radio at all. You can't even ground mount a Vertical in my town and be within the rules.

Twistie. what is inside of a fiberglass antenna?
a)More Fiberglass
b) Copper Wire
C) Nothing
D) Air

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:27159-3C064BFF-83@storefull-124.iap.bryant.webtv.net...
From: nojunkmail_n3cvj@worldlynx.net (Dave Hall)
Twistedhed wrote:
If you tell me that an Antron 99 is more prone to RFI problems with neighbor's entertainment equipment, I would agree with you. The design of the antenna, does not allow proper RF decoupling, and allows the feedline to radiate, which places RF in proximity to powerlines and neighboring homes, and exacerbates RFI.
If you tell me that one antenna, radiates the second harmonic at a higher level than another type antenna, I would also agree. But it's still the radio that is generating the second harmonic.

"The radio without the antenna will not cause bleed. The radio tried on separate antennas, one a fiberglass stick, one a Maco, will bleed on the stick. Conclusion: The stick bleeds."

A flawed conclusion based on an incomplete understanding of the problem.

"I may have a lack of comprehension for the entire equation, but the end result has remained the same in all the instances I have been exposed to when extra power is not involved, and even some cases where it was. Let me try again.....a radio will not generate any BLEED (and all that goes with it) by itself, NOT connected to an antenna. The radio can bleed more with a fiberglass stick than it will with aluminum in most cases. I have never seen the opposite, where a bleed problem was fixed by going from fiberglass to aluminum, have you? Now, if you feel the need to delve into specific characteristics, I ask you to consider the scenario of using a fishfinder to find the big schools. You locate the big fish, the water is a low chop, the weather is nice, the bait is fresh, but nothing is hitting any kind of bait you throw. Now we know something is going on, but we are't certain exactly what. Does it really matter? To some of us, yes..to others no. What we do is take another course of action IE: another body of water, another time of day, artificial stimuli of feeding, go to lunch., etc. The thing is, we know something is wrong, so we change it, and we begin with simple actions and the majority of the time it is rectifiable with simple techniques. The comparison was done only to illustrate a point of view.

I have seen several bleed problems fixed when switching out fiberglass to aluminum...it works.....if you wish to educate the hows and whys and break it down into painfully tiny semantics, go for it..I'm all ears."

In the case of RFI, in most cases, the "problem" is caused by the lack of proper shielding of the device being interfered with. The greater the near field RF, the greater the amount of RFI. Some antennas radiate such that they put more of their radiated energy in the path of neighbor's homes, and make the RFI problem worse.
But they are not the root cause of the problem.

"Nope, they aren't the root cause all the time, but if the problem can be alleviated by a better antenna, all the better."

A very dirty transmitter on a dummy load will not cause RFI, but if you put it on an antenna and it magically causes RFI, is it the antenna's fault?

"It depends. If it bleeds on an Antron but not a metal antenna..I would place the blame on the antron, although I will admit I am prejudiced against fiberglass type antennas. One hardly even saw fiberglass base antennas compared to metal antennas before the eighties and nineties. The popularity of the fiberglass stick is due it's low price and lack of ground planes for easy handling. For that low price, you get a cheaper antenna made from fiberglass. Many radios never bled on metal antennas. All of a sudden they bleed on fiberglass antennas but not metal. In those cases I still say it's the antennas fault."

If I'm running an Antron 99 and not causing any RFI because I have neighbors that have high quality consumer electronics, is my antenna still "bleeding"?

"How could you know unless you heard it yourself or someone complained?"

If another neighbor CBer fires up a Galaxy Saturn Turbo (one of the dirtiest radios around) and he runs a Maco, and bleeds the same neighbors that my Antron does not, is the problem now his Maco?

"Nope, but let's run with that. Put that same Galaxy on a fiberglass stick AFTER it bleeds on the Maco. Does the bleed increase? You betcha!."

But all this aside, this has nothing to do with the original statement that concerns in-band adjacent channel bleed.

"For some reason you just limited it to "Channel bleed." I call that bleed as well. Most cbers refer to that as bleed, and also refer to interference with devices as "bleed", also."

One antenna will not "bleed" any more than another in this situation beyond that caused by the extra signal level caused by a superior antenna gain.

"I still disagree. An A99 didn't get the reputation as a "bleedstick" unfairly. Why is it if I have at ground level the a99 and a 5/8 maco, does the bleed from the 99 get into almost everything compared to the maco, no matter which radio is attached?"

Adjacent channel splatter is caused by a signal falling outside of its allocated bandwidth.

"Yes, that is another form of what is referred to as "bleed."

Allowing an audio frequency response that exceeds 3500 hz, or allowing modulation to exceed 100% are the 2 most common ways of creating a wide signal, to an otherwise clean transmitter. There is nothing inherent about any antenna that would have any affect on transmitter bandwidth. It is possible that a transmitter is so unstable that changes in impedence caused by different antennas COULD change a transmitter's spectral purity, by allowing the final to oscillate or generate in-band spurs.

"Yea, on some antennas more than others, like a bleedstick."

I've seen certain Galaxy radios do this on SSB. Usually those radios have been "peaked and tweaked" for max output (usually without the benefit of a spectrum analyzer), and have become unstable and output impedence sensitive.

"Yep. And I've seen this exact problem alleviated by a switch to aluminum from fiberlass."

One might draw the conclusion that the antenna "caused" more bleed, but in fact it's the radio's transmitter that is responding improperly to the differences in antenna impedences.

"I can certainly see where that may be a case. I also am convinced that the fiberglass base antennas are more prone to bleed verses a metal antenna, no matter what the cause. I remain of the idea the symptom (if not the problem) is the cheaper fiberglass antenna will bleed before a metal antenna will."

Not only, I believe, PRB-1 would apply here (if it is an Amateur antenna), but many states have
enacted similar, accompanying PRB-1 regs as well. Many more are being introduced into state
legislatures at the behest of ARRL and individual hams. From what I understand about PRB-1,
your town is WAY out of line with that 8' bull****. It can be pointed out that there are many
people who are deeply involved in emergency communications of many types all over the country.
Many of these stations were active on September 11--CB, Amateur, CAP, GMRS--and lots of
them were operating from their homes. For a town to be so short sighted and just plain stupid is
almost funny if it weren't so pathetic, and, indeed, dangerous. I would like to see ALL these stupid,
invasive, and despicable ordinances stricken down by the Courts and FCC.

I have it on EXTREMELY good authority that there is a "certain" export and amp dealer about to
get hit. I cannot reveal which one, but I am told the field agents already have the case file in hand
and are working on it as I write this. Source? Let's put it this way: It can't get any more direct
than this. IF it makes a dent in the 10/12 meter bootlegging, then it will make me happy, too.
There are "hints" that certain amp makers will be getting hit as well. The wheels turn slowly, but
at least they are turning. We'll have to wait to see what happens.

73 All,

Jerry

When do you ever get a chance to practice??

I am told the Swiss are worse about languages than Americans -- with a lot less excuse it would seem

About all I ever get to practice is TexMex in beautiful South Omaha and I never studied Spanish at all.

Do you have a TJ (round headlights, coil springs)?

You have to deal with fuel pump, injectors, spark plugs and
the computer. Depending on the radio I've used, the amount
of noise is different, sideband radios being superior to
AM-only rigs. My antenna is a KW-7 Firestik mounted on the
left side of the rear bumper. I have removed the plastic
endcaps and drilled out the existing hole to 1/2". Coax
can be routed through a rubber plug in the rear left
corner of the tub and out over the gas tank to the mount.
Make sure the coax is secured with wire ties as snow will
accumulate on the coax making it heavy. Use copious amounts
of Coax-Seal on the connection. Happy trails.

>A poor analogy. The difference here is that CB DX is plain and simply
>ILLEGAL. It is addressed specifically in FCC regulations.

Actually, I think it's a pretty good analogy. While you are quite correct that in a co-op, condo, or deed-restricted community; the restrictions are a contractual agreement, you are mistaken re. an incorporated village. (Complete with their own PD.) Those do carry the weight of the law. Local law, but law nevertheless.

>Running a ham
>(or CB) station in a deed restricted community is not.

Correct!

>There may be
>covenants and restrictions on antenna structures that are based on
>aesthetic appearance, but in no case, that I've heard about, is actually
>operating a transmitter not allowed.

That's because in the real world, the common sense factor is applied. BTW, this has nothing to do with a transmitter.

>If you can creatively construct
>"disguise" antennas that do not violate the intent of the deed
>restrictions, you are free to do so.

This is not necessarily true in an incorporated village. We have plenty of them in NJ. The local LEO WILL rain on your "tower raising" party if it violates the village's ordinances. (Read laws)

>I put out a fiberglass flag
>pole, that just happens to cover up an all band HF vertical antenna, no
>one complains, and no rules were broken, since there is no restriction
>against a flagpole.

This is not the same as a hair thin longwire shot from your balcony into a tree, now is it?

>As a matter of practicality, dxing on the legal 40 carries about as much
>penalty as failure to observe the 5 minute on, one minute off rule, or
>failure to identify with proper callsign (When that was required).
>Usually just a summary offense, and not worth pursuit in most cases.

True.>

But this arguement is about principles.

Lighten up a touch Dave, this is not really an argument. It's meant as a tongue-in-cheek analogy, and the overt analogy is not even the true one. Please treat it as such.

>The fact that someone chooses to
>ignore a law (or rule for those hung up on semantics) simply because
>they perceive relative unimportance says far more about their moral
>principles.

Bingo! You've struck paydirt!

>
>If the only way you'll obey a law is if there's a gun to your head, or
>the threat of REAL retribution is enough of a deterrant, rather than
>obeying because it's simply the right thing to do echoes the lack of
>proper upbringing that most parents of the last generation are guilty
>of, for not instilling proper values.
>

There was plenty of "dirty deeds" in their days too, Dave. It's allot more out in the open today though.

>50 years ago, if there was a rule, most people obeyed. They didn't ask
>why, they didn't have to. It was understood that a civilized society
>needs to have rules in order to remain civilized. The more rules you
>ignore, the more unraveled our society becomes, and the closer to
>anarchy we become.
>

Does this include our longwire too? Perhaps we can let that one slide because it's not the weight of the law "holding that gun to our heads." It's just the rules that we ostensibly agreed to with our neighbors when we moved in, Yes? After all, they won't notice and their only our neighbors, not the law.

>Now we have people here trying to spin and justify their reasons why a
>certain rule (or rules) are somehow unjust and thow they are within
>their "right" to ignore them.

No Dave, it was just me poking some fun. No malicious attempt to trivialize any rules.

>All of these excuses are lame. Maybe you
>are sucessful at appeasing your own morally corrupt conscience, but the
>rest of us don't buy it. There is no such thing as a victimless crime.

Yes, I agree. The excuses are lame. My conscience is quite clear, thanks. Take care and 73.

BZZZZZT! Sorry, I should've been clearer. "(& these puppies are LAWS!)" referred only to incorporated villages. I lived in NJ, the land of the "provincial" gov't and their "friendly" police departments. Feel free to tell your local village police officer that the villages ordinances "don't carry the weight of the law." Take care and 73.

>meters. Any suggestions ?
Jay, I had a 3 element and wasn't impressed. Maybe you should try adding a
single director to the Quad. Wind load seems to be the common worry along with
rotor requirements. If the director idea isn't an option how about feeding the
Vertical element of the quad 90 degrees out of phase from the Horizontal and go
for dual polarization. Keep it up...Joe

NO, you don't put a 9' whip on the bumper of ANY van--too much metal next to the antenna for high SWR.

You have a UNIDEN 76 or a Cobra 29, right? And you do NOT dead key of 17 watts on it either (the most I've seen as a CB shop in 22+ years is 11 watts on a 29).
That IS da facts, sir!
Dave!!!!!!!!!!!!!!!!

Hello all,

I am not sure if my question is appropriate for this newsgroup, my apologies if it is not.

I am trying to help a long time friend of mine that is starting up a record label.
I need help finding a source (can be via internet, book/magazine publication or even data CD) that has a listing of all the U.S. radio stations including address, phone numbers and genre.

If anyone knows of any, can you please post them.

Thanks
A Friend Trying to Help ;-)

7181. Re: Suggestion for a 3 element flat side 11m beam?

Newsgroup: rec.radio.cb
Date: 2001-11-30 02:49:46 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3C06F3CA.A9FE5CEA@qnet.com>
Source record: 106193

Hello Moparholic: The PDL-II two element Quad Beam Antenna is not bad antenna at all, and in fact its not really appreciated as to the Noggin Scratching it took to make that antenna work for both Vert & Horz. I applaud the design guys.

A 3 element Horz Yagi Beam Antenna will of course work, but the gain or difference will not justify cost, and time in my humble opinion. Some of the other guys said that 2, ah!

However using a 4 or 5 element Horz beam, with a higher mounted ground plane antenna, above the Horz mounted Yagi, will work great.

But be advised:

You don't want to use some chicken shit, goof ball set up. Like a TV Push-up mast, or a single piece of 1 inch pipe. Had a guy a year ago put up a PDL-II on TV Push-up mast, and just last Saturday night he lost it, to sever winds.
I had my mast bent, but the antenna didn't get damaged. So much for the expensive Push-up masts. Also broke a windshield in one of the trucks and window in the house from the blast and gust of winds.

Its so far cheaper and easier to use a light weight tower for a PDL-II, hope thats what your using. I like the larger towers that have the Rotor mounted inside the Triangle Tower Assembly, and uses Trust Bearings, and lasts for ever! The old Fart Ham just down the dirt, muddy, deep, trechous, road about 20 miles, every year climbs up and shoots the Rotor and bearnings with a few squirts of grease from a grease gun. He says: "Lot easier doing it the cheap way"

The Ground Plane Antenna, with its Ground Plane Radials, must be mounted at least 7 to 9 feet above the Horz Beam, with the ground plane radials parallel to the beams boom and elements. This means that a ground plane antenna with 3 ground plane radials, spaced at 120 degree's apart will not work, because the elemnets will not be parellel with the beams, boom or elements. It will cause the beam to work like a omni directional antenna. So this drives the design of the ground plane antenna to have 4 ground plane radials, evenly spaced at 90 degress's from each other, and parallel to the beams boom and elements.

Or you can get fancy and have the ground plane antenna use the beams boom and elements as a ground plane antenna.

I have set up a 6 meter vertical with a 6 meter Horz Beam, the beam for shootin skip, and vertical for local stuff, or shootin skip also, since the impedance matching device has a very low loss.

I don't believe the Gamma matching method is a good one. I believe the Beta or Hair Pin matching method is much better. I haven't measured the difference in a beam with the 2 different matching methods, but I will. These things they don't put in the books ah! Because somebody paid to have the differences measured, and said: "No thats ok we'll keep it the design "What we learned book" and if someone whats the data they can measure it!

Hope this helps.

Jay in the Great Muddy Mojave Desert.

What you heard was foreign broadcast from Spain (we think) or possibly
South America somewhere... It's a common thing on 40 meters at night.

hello:
Actually I have both radios, and prefer the 77's performance. It doesn't have the problem with volatile channel memory that the 2010 did, and in all of the listening I have done the sync has been equal to that of the 2010. In addition, the 77 performed better than the 2010 side by side when I tried receiving the final broadcast from St. Helena a couple of years back...

Having said that, I would tell the original poster that the 77 has a learning curve that may not be everyone's cup of tea.

thnk you

Reasonable is in the details and the devil is in the details.

It is also called the Private Radio
> Bureau not bulletin.

My goof, but it does exist and it can be cited as case law.

I have been to superior court in my state fighting an
> antenna case against my town.

I'll assume you are an amateur op. Superior Court is
a Court of Local Jurisdiction (State) and PRB-1 is a
Federal Issue. Since no accomadation i sprovided for
in either the Law or the Planning Commission rules,
this would be very easy to overturn the apple cart.

A meeting with the Town Attorney would probably be
in order to allow him to explore PRB-1 and its case
law outside the formal court setting. Most attorneys
and Judges have very little if no practical experience
with Amateur Radio so a little off the record
introduction will help familirize him or her with the
issues. Here in Louisiana, Cell towers are all the rage
and Amateur Radio was given a mention with a state wide
PRB-1 (To keep cases out of Federal Court on Juridictional
issues).

The Town Attorney doesn't want his ordinance overturned
on Constitutional Grounds with the Cell Types looking
in to see what the matter is? It doesn't take much
to persuade an attorney not open a can of worms.

My town has a 8' height restriction whether it
> is off the rooftop or off the ground. This ordinance was basically drawn up
> when the 8' satellite dishes were popular. It has no provisions for amateur
> radio at all.

Good PRB-1 test case area, get with ARRL and they have plenty of ammo
for your attorney to use.

You can't even ground mount a Vertical in my town and be
> within the rules.

Hello,
I have read the 3 element posting here and decided to say a few things.Before I moved hear recently I had a tower 30 feet in the air.I used a ham 4 rotor.I bought a 4 element maco but wanted to try horizontal but with the exception everybody I talk to in the area is vertical.well I searched the net and found yaesu had a rotor for elevation on the satelitte antennas.I bought it here is a link to the site where it is at all amatuer radio places usally carry yaesu products.
http://www.yaesu.com/amateur/g550.html
Instead of putting the boom to mast plate on my beam I put this rotor and attached the rotor to the mast well to say the least it works great I can use my beam flat or vertical.I did this to save room and not have to have a bulky antenna up.Well thought I wud share this with you later Mike

thank you

I want to get a CB radio for my pickup. I bought a little hand held unit for a trip to Florida and as I am sure you guys know it sucked. The user manual suggested an external antenna for vehicle use, but I thought the thing should at least be able to reach a truck right beside me.

Well if I need a fixed antenna the portable unit doesn't make sense so I guess I will get one that mounts in the dash. I see a lot of radios for a lot of prices. I just want one for traffic reports on the road ahead and maybe some bs'ing.

Which low end or mid level radio would you guys recommend?

I agree 100% with Jerry on this. PRB-1 should be brought further along than where it stands right now. Long Island is full of incorporated villages "aerial"ly challenged. Particularly in the more affluent neighborhoods. The "village" cops WILL stop you from putting an antenna up if a neighbor calls it in quick enough and it's against the local ordinances. It's "all on you" then to sue for the right to put that tower and/or antenna up "legally." By that time, I believe Mark is right...you will be a) very tired and b) very broke. BTW Mark, that Rohn tower is 56 ft. tall. I've seen amateur radio/11-meter towers and antennas in your town Mark, (Port Jefferson) but move over one town and you're in the village of Belle Terre. NOT!!!

On the other issue of condos, co-ops, and deed-restricted neighborhoods, my mom lives in a condo development and I did find one ham who was up front with the board and they made provisions for a small vertical on the roof. That's encoraging. This is in a development where you cannot even wash your own car in front of your condo. You have to take it to a designated washing area. More like a double driveway with a garden hose. I also have to laugh when I visit my best bud down in the outskirts of Baltimore, MD. He started out in a townhouse but hated it when he observed the neighbors nit-picking over the smallest stuff, like the look of some kiddie swings or such. Now he lives in a deed-restricted neighborhood, which is better but his 2-meter antenna will have to be mounted in the attic. The bottom line is you've got to keep your antenna requirements in mind when you're shopping for a new home these days. There you go, Mark. I kept it light. Good post, Jerry. :-)

Another none helping reply.

You need a bunch more hands on dude. I make antennas smaller for the
higher frequencies, not the lower frequencies.

Suggested reading: ARRL Antenna Book.

This may be so, but the energy goes in different directions / patterns
from the ground plane as compared to the end feed fiberglass antennas.

I wish I had a dime for everytime a fiberglass antenna was replaced with
a ground plane antenna to reduce or elminate interference.

I've already told you why the "stick" type antennas exacerbate RFI situations. In many cases, these same "bleedsticks" can be made to not "bleed" by using some techniques that mitigate the inherent design flaws.

>
> In the case of RFI, in most cases, the "problem" is caused by the lack

Sure. It's a solution that's easy to understand by even the most clueless operator. But when you reach conclusions without totally understand why, then you start propagating half truths, and that's how all the "CB science" myths get started.

>
> A very dirty transmitter on a dummy load will not cause RFI, but if you

> ground planes for easy handling.

Actually, it has more to do with liability cases, from clueless morons getting electrocuted when erecting their "metal" antennas, and having them come into contact with power lines. American antenna companies do not want to be open to liability lawsuits, so they make CB antennas that even slack-jawed yokels can install without killing themselves. Why do you think there are all those "danger stickers" supplied with base antennas?
They still make "metal" ham antennas, and they are typically no more expensive than similar fiberglass types. The difference is that hams are perceived as a little more knowlegable, and would be less likely to have an electrocution accident.

> For that low price, you get a cheaper
> antenna made from fiberglass. Many radios never bled on metal antennas.
> All of a sudden they bleed on fiberglass antennas but not metal. In
> those cases I still say it's the antennas fault."

This is a good example of what I have been saying about drawing the wrong conclusion. By listening to your points, someone may get the impression that something is inherently wrong with an antenna that is

made from fiberglass, simply due to the material used. In reality, it has NOTHING to do with the material used, and everything to do with the antenna design and the decoupling network. You could make the equivilent of an Antron 99 out of aluminum, and it would have the same issues. Conversely, if I were to coat your Maco with fiberglass, it wouldn't start magically "bleeding".

>
> If I'm running an Antron 99 and not causing any RFI because I have
> neighbors that have high quality consumer electronics, is my antenna
> still "bleeding"?
>
> "How could you know unless you heard it yourself or someone complained?"

Sort of like the old "if a tree falls in the forest and no one is there, did it still make a noise"?

The point is that the "bleed" problem may not exist if properly shielded equipment is used on the consumer end. In this case, the type of antenna is irrelevant.

>
> If another neighbor CBer fires up a Galaxy Saturn Turbo (one of the
> dirtiest radios around) and he runs a Maco, and bleeds the same

>
> "Nope, but let's run with that. Put that same Galaxy on a fiberglass
> stick AFTER it bleeds on the Maco. Does the bleed increase? You
> betcha!."

Not necessarily. If immunity to near field RF is achieved by utilizing properly shielded consumer devices, and now, due to the dirty radio, you are causing RFI due to harmonic content (A different animal), the "stick" antenna may not be any worse, since the type of RFI is not related to the antenna's near field RF characteristics (Which had been taken care of by the shielded devices).

>
> But all this aside, this has nothing to do with the original statement
> that concerns in-band adjacent channel bleed.
>
> "For some reason you just limited it to "Channel bleed." I call that
> bleed as well. Most cbers refer to that as bleed, and also refer to
> interference with devices as "bleed", also."

And that is one of the problems. You want to lump all interference situations into one barrel and slap the label of "bleed" to it. While I am attempting to illustrate that there are many types of interference, not all related, and not all caused by the same things. Because a "stick" antenna is responsible for increasing the incidences of near field RF overload, does not mean that the same antenna is responsible for increasing adjacent channel splatter or harmonic generation.

The original post by Landshark, that I responded to, dealt with adjacent channel bleed. That is why I keep coming back to it. I agree with you that Antron-type antennas are contributory whith respect to near field RF interference to consumer devices. What I was arguing was that (in this case an Astro Plane) antennas cannot be responsible for increasing adjacent channel splatter, since they do nothing more than radiate the signal fed to it, unless the transmitter is somehow unstable, and operates differently to different impedence loads placed on it. But it's still the transmitter's fault.

>
> "I still disagree. An A99 didn't get the reputation as a "bleedstick"

We already addressed that, but you need to see the difference between one form of RFI and another.

>

> metal antenna will."

I will conclude this with the statement that there are many things that can influence a specific RFI situation. It might be fine to switch one component of the system, and alleviate a problem, pat yourself on the back and then badmouth the replaced part. But many of us strive to understand the big picture, and try to understand the interaction that the many components of a radio system have with each other. I've known people that have run baluns on A-99's and solved RFI issues. An A-99's "bleed" problems can also be solved (or reduced) by mounting the antenna up high above the house. Radios that have an instability problem can be fixed. Maybe it might be easier to just buy a different antenna, but you're just masking the root problem that way.

Exactly!

I have real world experience comparing an Astro Plane with a Hustler
5/8th wave ground plane. The 5/8th was head and shoulders above the AP
on transmitted signal. I lived in an area that was somewhat "in the
hole" and antennas like the AP that required a high, open location, just
didn't work for me. Other people, that did have a more favorable
location, reported excellent results from the AP.

> working, so far unsuccess-
> fully, to get FCC to take it further.

PRB-1 is moderately successful at overturing restrictive community
zoning laws that restrict hams from erecting a "reasonable" antenna
system. The basis for this is that since hams are federally licensed,
that federal law supercedes local law. It usually takes a court case to
win, and many people don't have the stomach (or funds) to go the course,
but there have been successes (and some failures:( )

Where PRB-1 falls flat is in dealing with priviate community CC&R's (AKA
deed restrictions). Since you had to sign them, in order to move in, you

have given your agreement to the restrictions in a legally binding document. Trying to overturn that is much more difficult. That is why many people "cheat" by inventing ways of running hidden antennas. As long as they are not exposed, they cannot violate the CC&R restrictions.

> My own take on this is, well, why would a radio hobbyist move into such a
> place anyhow? When I bought my own house 15 years ago, I checked to affirm
> that there were no ordinances or coven-
> ants to prevent me from putting up dipoles or towers.

The answer to this question is usually that they have little choice. Most new housing development have restrictions of some sort. I have a boat, a camper AND antennas. Believe me, it's tough to find places that allow these things. Your other alternative is to move into older areas, or into areas that are out in the middle of nowhere, which would create a problem for commuting.

> Incidentally, could this preemption be used by CBers, or is it just for
> hams?

PRB-1 does not apply to CBers at all. Since CBers are not licensed, they cannot claim the same federal preemption of local zoning laws.

'Doc

i THINK YOU DID MISS SOMETHING, I DIDN'T SEE WHERE HE SAID THAT. MY TAKE ON IT IS A 3 ELEMENT HORIZONTAL YAGI HAS A LARGER TRURNING RADIUS THAN ANY OTHER 11 METER ANTENNA WITH A 16' BOOM. ANY ANTENNA BEING QUAD/YAGI/QUAGI. i THINK YOUR READING SOMETHING THATS NOT THERE.

I've already told you why the "stick" type antennas exacerbate RFI situations. In many cases, these same "bleedsticks" can be made to not "bleed" by using some techniques that mitigate the inherent design flaws.

"Why use an antenna that has inherent design flaws at all? That was my point. Let me reiterate again. A fiberglass stick is not close to the performance of a metal antenna, one reason being the bleed characteristics that are associated with fiberglass antennas that do not exist when switched to metal."

In the case of RFI, in most cases, the "problem" is caused by the lack of proper shielding of the device being interfered with. The greater the near field RF, the greater the amount of RFI. Some antennas radiate such that they put more of their radiated energy in the path of neighbor's homes, and make the RFI problem worse.
But they are not the root cause of the problem.

"Nope, they aren't the root cause all the time, but if the problem can be alleviated by a better antenna, all the better."

Sure. It's a solution that's easy to understand by even the most clueless operator. But when you reach conclusions without totally understand why, then you start propagating half truths, and that's how all the "CB science" myths get started.

"I still take issue with it. One doesn't need to memorize all of Mosleys notes to understand that fiberglass is worse than metal for bleed. Let's say you have a favorite cleaner detergent for your garage floor where you park your car. Do you need to understand the exact breakdown and molecular structure, define the osmosis process and cleaning composition and why it crystallizes in order for it to work? No, you don't. All you know is brand A is better than brand X and it works for you. Why is almost a separate issue. As a matter of fact, it is a separate issue. The fact that you are aware of how the chemical process works, it's ph level and boiling point does not change how one is superior than the other..it may explain WHY...but the fact remains that you know which one works."

A very dirty transmitter on a dummy load will not cause RFI, but if you put it on an antenna and it magically causes RFI, is it the antenna's fault?
"It depends. If it bleeds on an Antron but not a metal antenna..I would place the blame on the antron, although I will admit I am prejudiced against fiberglass type antennas. One hardly even saw fiberglass base antennas compared to metal antennas before the eighties and nineties.

The popularity of the fiberglass stick is due it's low price and lack of ground planes for easy handling.
--
Actually, it has more to do with liability cases, from clueless morons getting electrocuted when erecting their "metal" antennas, and having them come into contact with power lines. American antenna companies do not want to be open to liability lawsuits, so they make CB antennas that even slack-jawed yokels can install without killing themselves. Why do you think there are all those "danger stickers" supplied with base antennas?

"Yup, I know that."

They still make "metal" ham antennas, and they are typically no more expensive than similar fiberglass types. The difference is that hams are perceived as a little more knowlegable, and would be less likely to have an electrocution accident.

"I don't think so. Grab an AES catalog. Many of the hamtennas that were once metal are now fiberglass including beams, so not all manufacturers share your pereived notion about hams. I do not believe for one moment the manufacturers thought, "You know, hammies have more on the ball so we can still make metal for them", otherwise all those fiberglass beams would still be metal. The bottom line is twofold, Cost certainly plays it's role, probably second to safety."

For that low price, you get a cheaper
antenna made from fiberglass. Many radios never bled on metal antennas. All of a sudden they bleed on fiberglass antennas but not metal. In those cases I still say it's the antennas fault."
This is a good example of what I have been saying about drawing the wrong conclusion. By listening to your points, someone may get the impression that something is inherently wrong with an antenna that is made from fiberglass, simply due to the material used. In reality, it has NOTHING to do with the material used, and everything to do with the antenna design and the decoupling network. You could make the equivilent of an Antron 99 out of aluminum, and it would have the same issues. Conversely, if I were to coat your Maco with fiberglass, it wouldn't start magically "bleeding".
If I'm running an Antron 99 and not causing any RFI because I have neighbors that have high quality consumer electronics, is my antenna still "bleeding"?
"How could you know unless you heard it yourself or someone complained?"
Sort of like the old "if a tree falls in the forest and no one is there, did it still make a noise"?

:)

The point is that the "bleed" problem may not exist if properly shielded equipment is used on the consumer end. In this case, the type of antenna is irrelevant.
If another neighbor CBer fires up a Galaxy Saturn Turbo (one of the

dirtiest radios around) and he runs a Maco, and bleeds the same neighbors that my Antron does not, is the problem now his Maco?
"Nope, but let's run with that. Put that same Galaxy on a fiberglass stick AFTER it bleeds on the Maco. Does the bleed increase? You betcha!."
Not necessarily. If immunity to near field RF is achieved by utilizing properly shielded consumer devices, and now, due to the dirty radio, you are causing RFI due to harmonic content (A different animal), the "stick" antenna may not be any worse, since the type of RFI is not related to the antenna's near field RF characteristics (Which had been taken care of by the shielded devices).

"Ok, granted. Now apply it to today's standards. How many consumer devices are properly shielded? Not many..making using a fiberglass antenna undesirable in many cases because of it's inherent design flaws which allow bleed and interference from a radio that normally would not do so with a metal antenna."

But all this aside, this has nothing to do with the original statement that concerns in-band adjacent channel bleed.
"For some reason you just limited it to "Channel bleed." I call that bleed as well. Most cbers refer to that as bleed, and also refer to interference with devices as "bleed", also."
And that is one of the problems. You want to lump all interference situations into one barrel and slap the label of "bleed" to it. While I am attempting to illustrate that there are many types of interference, not all related, and not all caused by the same things.

"Point taken."

Because a "stick" antenna is responsible for increasing the incidences of near field RF overload, does not mean that the same antenna is responsible for increasing adjacent channel splatter or harmonic generation.
The original post by Landshark, that I responded to, dealt with adjacent channel bleed. That is why I keep coming back to it. I agree with you that Antron-type antennas are contributory whith respect to near field RF interference to consumer devices. What I was arguing was that (in this case an Astro Plane) antennas cannot be responsible for increasing adjacent channel splatter, since they do nothing more than radiate the signal fed to it, unless the transmitter is somehow unstable, and operates differently to different impedence loads placed on it. But it's still the transmitter's fault.

"if several radios bleed on my glass antenna but don't make a quiver of bleed/interference on my metal ones, I blame the glass antenna. Whether it's a design flaw or not is not even an issue at this point. If one gets rid of the antenna and the problem is solved, then the "why it bleeds" doesn't really fit into the equation unless one chooses to continue using it."

"I still disagree. An A99 didn't get the reputation as a "bleedstick" unfairly. Why is it if I have at ground level the a99 and a 5/8 maco, does the bleed from the 99 get into almost everything compared to the maco, no matter which radio is attached?"
We already addressed that, but you need to see the difference between one form of RFI and another.
  Adjacent channel splatter is caused by a signal falling outside of its allocated bandwidth.
"Yes, that is another form of what is referred to as "bleed."
Allowing an audio frequency response that exceeds 3500 hz, or allowing modulation to exceed 100% are the 2 most common ways of creating a wide signal, to an otherwise clean transmitter. There is nothing inherent about any antenna that would have any affect on transmitter bandwidth. It is possible that a transmitter is so unstable that changes in impedence caused by different antennas COULD change a transmitter's spectral purity, by allowing the final to oscillate or generate in-band spurs.
"Yea, on some antennas more than others, like a bleedstick."
I've seen certain Galaxy radios do this on SSB. Usually those radios have been "peaked and tweaked" for max output (usually without the benefit of a spectrum analyzer), and have become unstable and output impedence sensitive.
"Yep. And I've seen this exact problem alleviated by a switch to aluminum from fiberlass."
One might draw the conclusion that the antenna "caused" more bleed, but in fact it's the radio's transmitter that is responding improperly to the differences in antenna impedences.

"Ok. So we can agree the fiberglass is an inferior antenna and more susceptible to bleed/interference for reasons stated?"

"I can certainly see where that may be a case. I also am convinced that the fiberglass base antennas are more prone to bleed verses a metal antenna, no matter what the cause. I remain of the idea the symptom (if not the problem) is the cheaper fiberglass antenna will bleed before a metal antenna will."
I will conclude this with the statement that there are many things that can influence a specific RFI situation. It might be fine to switch one component of the system, and alleviate a problem, pat yourself on the back and then badmouth the replaced part. But many of us strive to understand the big picture, and try to understand the interaction that the many components of a radio system have with each other. I've known people that have run baluns on A-99's and solved RFI issues. An A-99's "bleed" problems can also be solved (or reduced) by mounting the antenna up high above the house.

"I have had those antennas so high in trees that it would cause a nosebleed.
A channel or 2 away and sometimes some "chirping" or bleed comes through. Throw the switch to the Maco and..... voila
..golden silence where there once was adjacent channel noise."

Radios that have an instability problem can be fixed. Maybe it might be easier to just buy a different antenna, but you're just masking the root problem that way.

"As long as I mask the noise to my neighbors and bother no one, I'm happy. I only use the stick for my portable now, the boat, camping, etc. If I was in a position where the 99 was all I could use, I would explore this further with you. Thanks for the education. "

dave. we have been in a recession and it started during the clinton administration watch. and you know the day it started. when clinton tried to strongarm microsoft for money ,and they refused, and he filed suit on them to dissolve the company. yep that's the day it started. but they could have cared less. all liberals care about it advancing the liberal agenda.....and the only time they care about the economy is when it makes them look good and helps them to achieve their overall purpose.....i heard on the radio yesterday , that orders for durable goods increased for the last quarter, the first time since march.....give it time. the low interest rates will stimulate the economy. we just have to make it over the hump and the hurdles. heck we lost a company that used its name on our new ball park. they employed 21,000 employees. their stock last year was trading at about $90.00 a share. today , it is almost worthless. oh well. so many people lost everything they had in retirement benefits and savings almost overnight. all i can say is merry Christmas....welcome to the mines.....

7214. Which CB ? Uniden Grant XL - PC76 XLW - Cobra 148 GTL - Galaxy DX959

Newsgroup: rec.radio.cb
Date: 2001-11-30 16:08:55 UTC

Source record: 106226

Hello All,
I am a newbie to the CB world and would like to know which CB to buy. I have done my homework on the net and have narrowed the choices down to 4 radio's and a base radio. My current radio is a Cobra 45 WXST (which died) and a Wilson 1000 mag mount. I would be forever grateful if someone could give me a push as to which radio to go with. I can get these radio's brand new. I would like to have the capabilities to 'mod' so I need to know the best starting point. Price is not an issue. I have been told by several local CB shops that if I go with the Galaxy, the FCC will find me, rip off my fingernails w/o beer as an anesthetic, kill me and then fine me $7200.00. I am also being told that SSB is going away and is worthless. Any advice would help a lot. Below are my choices.

1. Uniden Grant XL $147.90
2. Uniden PC76 XLW $107.90
3. Cobra 148 GTL $159.90
4. Galaxy DX959 $219.90
5. Uniden Washington as the base radio. $219.90

Please help and Thanks in advance, Dave.

Well Dave, I would have to say that they are all pretty good choices. I personally use the 76XL. Not the one with weather channel. It is very "modifyable" , so to speak, on the transmit side but does tend to lack a little bit in receive. Now some have told me that it can be tuned for better reveive but I have not done this. It really isn't bad enough to make me not like it, but the 148s and the Grants are better listeners. Uniden also makes a Grant LT which is very similar to the old Grant XL and 148 GTL plus it has lights around all of the knobs for ease of use at night. Any of these three radios are a very good choice. They have the option of sideband if you want it, they can be modified a little bit for power output, modulation, and extra channels, and they have a good receive. As far as the base radio, the Washington, it is a nice radio but I would definately look into a Cobra 2000GTL. Excellent base radio if you ask me. Hope that helps ya out a little bit.

Sorry Steve....10 METERS IS A HAM BAND.

Many hams are just now beginning to wake up to the fact that "10 meter
radios" are now being pushed on CBers by distributors/manufacturers.
And it pisses them off.

Cross-posted to: rec.radio.cb,rec.radio.swap,rec.radio.amateur.equipment

FOR SALE: Uniden HR2600 10-meter All-Mode Mobile Transceiver - $165

- Covers 28.0 to 29.7 MHz
- All Modes (AM/FM/USB/LSB/CW)
- 25 Watts RF Power Output
- Built-in Digital Meter (power, modulation, swr)
- CTCSS/PL Tone Encoder
- Repeater Split
- Noise Blanker, RIT and more

Package includes: radio, microphone, mounting bracket (and thumbscrews), power cable, owner's manual and the original box (all in great working condition).

$165 (plus shipping)

Source record: 106239

It's not the coaxial cable John. Question, does your
radio's 12 volt power cable go to the accessory power
terminal on the fuse block or distrubution panel?
If it does, disconnect it and run a power cable thru
the firewall and directly to the battery. Attach it right
onto the battery cable clamps using a suitable eye-lug
and hardware. Don't wedge the wires in between the post
and terminal, connect it to the terminals. The battery acts
as a large surge supressor and noise filter. Connecting
directly to it keeps a clean dc supply to the radio.
About 60% of the noise problems I see with CB sets,
ham radios and car audio I've corrected by going right to the battery.
Another trick is to bolt a insulated terminal strip onto the firewall
that's run to the battery. This way you have an "extension point"
for 12VDC power under the hood. Use #16 to #12 stranded wire
and keep it away from hot spots and ignition components. I usually
put tack-and-hold nylon ty-wrap points along the fender and firewall
keepin the wires as far away from the engine as possible. If you really
want to go first class, snake the wires inside of a long piece of 3/4" diameter
PVC tubing. Doing this will make em last the life of the car and protect them.

> But 27MHz FM is isn't it? This is what I have always been told.

The modulation mode makes no difference what so ever. For example I've personally monitored an FM contact between two Hams stations on the 10m band (28 to 29.7 MHz) between the state of Nevada and the U.K. with each station running 100 watts or less power when the conditions were right. You could have signals using AM, FM, or SSB and the signals will propagate just as far. Signals at 27 MHz are line of sight except when the MUF (maximum usable frequency) rises to 27 MHz or higher, which then allows the signals to reflect off of the ionosphere. Once the signals reflect off the ionosphere they may reflect off the ground and then back up to the ionosphere. This process may take place one or more times, which allows the signals to reach almost any place in the world at some point. The ground locations were the signals return are the locations where other stations can hear them. The area, beyond line of sight, between where the signals leave the ground and return to it is called a "skip zone", and normally you can't hear the signals there. Also when the MUF is below 27 MHz no amount of power will allow long range contacts regardless of what you may have heard. In that case the line of sight distance is the optical line of sight distance to typically about 4/3 of the pure optical line of sight distance due to a slight amount of atmospheric refraction that occurs.

Aaron, I think the problem is that some of us don't quite see the necessity of flaming this newsgroup. Things change as more people are affected and complain. An amateur radio operator is not an RF cop; leave that to the FCC. Believe me, some things take a while (especially since the FCC took an extended enforcement vacation for well over 20 years); however, changes are in the wind.

Not because of anything you did plow boy... If I am always killfiled and you don't want to read or respond to my posts then why do you ? You cannot ignore my post's you are drawn in like a moth to a light. Hey I have 5 different account according to you so why should I care what happens to @home. That is if you are correct. Which you are never.

7243. 6 DEMANDS FOR NEWSGROUP TROLLS

6 DEMANDS FOR NEWSGROUP TROLLS.

1. Stop being an A$$hole.

2. Stop sending your used Jockstraps to the men you lust over, but know you
can never have.

3. Stop masturbating over pictures of "keyclowns".

4. Everyone but your boyfriends hate you, stay if you must... but you're
killfiled.

5. Fellatio with "Action Man" and "Small Soldiers" toys is still fellatio...
so stop trying to deflect the attention.

6. Seek mental help.

Brainbuster.

Hi Michael.

Nice to hear from CBers in other countries.
CB is not as popular here as it was in the 1980s, but there are still quite a few left. It's becoming quiet here in the UK, but times change, and people move on. Now it's all computers, playstations, etc.

One thing we do have to go on here is the licence numbers. In December 2000, it was given as 30,000 licences, and declining at 10% per year. But we all know that there are many more who do not have a licence. They are considering dropping the licence, as it may soon cost them more than it makes (licensing is run by SSL, part of the post office).

We have no distance limit, DX is legal here... unlike in some countries.
You can find out a bit about UK CB here: http://www.radio.gov.uk/

Regards,

Brainbuster.

Where does he say it's a conductor?
Exactly... now wipe that egg off your face.

Many mobile CB antennas are made mainly from fiberglass.
Whoops, more egg... better wipe again.

BTW: All rhetorical, as I have blocked your whining a$$. I have better
things to do with my time than waste it on the likes of you.
You need to take a rather long sabatical, and come back when you have grown
up.

You are the weakest link... Goodbye.

I understand what you are saying a Moonraker 4 looks more imposing than a flat side beam to nosy neighbors.

As I sit here and wait the final hours before @home pulls the plug I reflect back upon the good and bad times I have had with the Ng. I hope Aaron and Leland and Sparky and the rest of the Good Time gang Jay, Mopar, Scott, Train, SD Jones, IcecoldNy, Bert etc etc even you Twitsie have enjoyed my company as much as I have yours. You may not like what I have to say or how I say it but that's what makes this a great country. I hope My legacy to this NG is one of being Fair, courteous, open minded, honest ..hmmm what did I leave out? Anyhow It has been real nice chatin with y'all so this is going to be my curtain call, when that little green activity light stops flickerin and they stop sending internet access down my cable line I will cease to exist. Much to the delight of some I am sure as this is an early Christmas present to them, I took your best shots though and will to the end. Good Bye and Good Luck

1/2 wavelength of the freq being tested or a multiple thereof will act as a perfect transformer and give you the accurate SWR reading that is so important to a good CBer.Don't forget to figure in velocity factor.TG
